

## Schedule for work – Black Swallow-wort Project 2018

Confirm all dates and times. Storms and heat may impact them.

Project Area 1: Millions of plants are found near the Town Center. We remove the vines with pods to prevent further spread and work with area residents. Some individual plants are dug by hand.

Project Area 2: In a priority site near the Sudbury river. More challenging, but some less difficult patches are found in the back of properties. We work with area residents on access and volunteering.

Work usually begins the first week of July and finished in early August depending upon the number of volunteers.

### Project Area 1 - Concord Rd.

July 2, 10-12:30

July 3, 1-3pm

July 4- no work
