P:\Private\Eversource Energy\Sudbury-Hudson Transmission\SGMP\S-H SGMP_Update_2.23.21.docx

1.0 INTRODUCTION

Weston & Sampson Engineers, Inc., (Weston & Sampson) has prepared this Soil and Groundwater Management Plan (SGMP), on behalf of Eversource Energy (Eversource), for the Sudbury-Hudson Transmission Reliability Project (the Project). The purpose of this Plan is to summarize the procedures for managing soil, groundwater, and miscellaneous excavated materials during the construction of a new underground electric transmission line from the Hudson Light and Power Department (HLPD) Substation in Hudson to Sudbury Substation in Sudbury, Massachusetts. Once the electric transmission line is installed by Eversource (Phase I of the Project), portions of the Project located on the Massachusetts Bay Transportation Authority (MBTA) Right of Way (ROW) will be further improved and utilized by the Department of Conservation and Recreation (DCR) as part of the Massachusetts Central Rail Trail (MCRT) which is termed Phase II of the Project. Weston & Sampson will be the acting License Site Professional (LSP) for this Project and will represent Eversource prior to and during construction.

This SGMP has been prepared based on available information and data collected as part of Project due diligence, planning, and permitting efforts. It should be noted that additional data will be collected as part of local permit requirements prior to construction. In addition, once a contractor has been selected, specific means and methods to be employed by the contractor may need to be incorporated into this document. As such, this SGMP should be considered a “living” document and may be updated as needed to reflect the latest Project information and data.

1.1 Project Overview

The Project will include installation of a new 115-kilovolt (kv) underground electric transmission line within an inactive MBTA ROW and public roadways in the communities of Hudson, Marlborough, Stow and Sudbury. The Project is a collaborative effort between Eversource and the Massachusetts DCR and will serve the dual purpose of increasing the regional transmission system’s reliability as well as advance a state-wide multi-use trail network initiative. The Project Limits are shown in Figure 1 – Project Area Map. This SGMP is intended for use during the installation of the 115 kv transmission line (Phase I of the Project) only and is not intended for use by DCR during Phase II of the Project.

As shown in Figure 1, the Project is approximately 9 miles long, and is predominately located in Hudson and Sudbury, Massachusetts. In total, the portion of the Project in Hudson is approximately 4.7 miles in length which begins at the HLPD substation and continues along municipal roadways for approximately 1.4 miles to the intersection of Wilkins Street and the inactive MBTA ROW. From this intersection, the Project continues in Hudson approximately 3.3 miles along the existing inactive MBTA ROW to the Hudson/Sudbury municipal border. The Project in Sudbury is approximately 4.3 miles long and is located entirely within the MBTA ROW from the Hudson/Sudbury municipal border to the Sudbury Substation off Route 20. The Project extents in Stow and Marlborough are limited and are confined to the existing MBTA ROW.

The Project will involve excavating and handling soil and groundwater to construct the proposed electric transmission line, install 28 manholes, and complete associated infrastructure improvements along the former MBTA ROW. The proposed electrical transmission line trench will measure approximately five (5) feet wide and 5 feet deep. Manholes will be approximately eight (8) feet wide by 24 feet long by eight (8) feet deep and will be placed approximately every 1,500 to 1,800 linear feet along the Project. It is estimated that the transmission line construction will require managing an estimated 58,000 cubic yards

of excavated soil. Based on the anticipated depth of excavation, the Project will also require groundwater dewatering to complete construction. Procedures for appropriate soil and groundwater management during the Project are outlined in Sections 3.0 and 4.0.

1.2 Project Area Description

For the purposes of this SGMP, the Project is discussed in terms of work areas located in the public right-of-way (herein referred to as the “in-road” portion), and the remaining work areas in the inactive MBTA ROW (herein referred to as the “MBTA ROW” portion). These areas are shown in Figure 1 and described below.

1.2.1 In-Road Portion

The in-road portion of the Project includes portions of public roads, which have been roads since the early 1900s. The in-road portion of the Project begins at the HLDP substation, extends approximately 1.4 miles in Hudson and is bounded by cross streets Wilkins Street and Forest Avenue. As shown in Figure 1, the eastern extent of the in-road portion is characterized primarily by undeveloped or residential land use. The western extent includes mixed residential, undeveloped, commercial, and industrial/manufacturing uses.

1.2.2 MBTA Right-of-Way

The MBTA ROW portion of the Project includes a section of the former Central Massachusetts Railroad from the intersection of Wilkins Street in Hudson to the Sudbury Substation located off Route 20 in Sudbury. Historically used for railroad operations from at least 1881 until 1971, this portion of the Project consists of approximately 3.3 miles in Hudson and 4.3 miles in Sudbury. As shown in Figure 2, the ROW portion includes intersections with several public roads, including Chestnut Street/Marlboro Street, Main Street, Paramenter Street, and White Pond Road in Hudson and Dutton Road, Horse Pond Road, Union Avenue, Boston Post Road and Landham Road in Sudbury.

According to historical aerial photographs, the area surrounding the Project was historically associated with agricultural use or undeveloped until at least 1960; after which residential developments began to appear around the Project area. Industrial property development also occurred between 1965 and 1978 along the portion of the Project located in Sudbury. Since these developments, the general uses abutting the ROW have largely remained the same. Currently, the area surrounding the ROW includes residential areas, commercial developments, wooded areas, and roadways. The MBTA ROW itself is variable in width but is approximately 82 feet wide in most locations. Within the ROW, the former track and underlying ballast occupy a footprint that is approximately 11 feet wide. In most areas, walking paths of variable width also exist. Figure 2 depicts surrounding areas, the MBTA ROW property boundary, and the Project's limits of work.

1.3 Natural Resource Areas

According to available information from the Massachusetts Bureau of Geographic Information (MassGIS), the Project corridor intersects Estimated Habitat designated by the natural Heritage & Endangered Species Program, a Federal Emergency Management Agency (FEMA) 100-year flood plain, freshwater wetlands, Zone II Protection Areas, Protected Open Space, potentially productive aquifers, and medium yield non-potential drinking water source areas. Additionally, there are also potential and certified vernal pools within 500 feet of the Project.

Properties within Hudson and Sudbury are serviced by public water supply wells and a municipal sewer system. Within Hudson, there are four (4) public water supply wells within 1,000-feet of the Project Area. There no public water supply wells within 1,000 feet in Sudbury or Stow; however, a portion of the Project in Sudbury does coincide with a Zone II groundwater public water supply protection area for wells in Sudbury. Wetland resource areas jurisdictional limits within the Project limits are presented on Figure 3.

Because the Project will involve working in or proximate to various natural resource areas or their jurisdictional buffer zones established under the Massachusetts Wetlands Protection Act, Eversource submitted Notices of Intent (NOIs) with Conservation Commissions in the Towns of Hudson, Stow, and Sudbury. The Orders of Conditions (OOC) issued from each Commission specify special conditions for handling soil and groundwater during work within natural resource areas of their buffer zones. These conditions are further discussed in Sections 3.0 and 4.0. Copies of the OOCs are provided in Appendix A.

1.4 Soil & Groundwater Management Scope of Work

The soil and groundwater management activities addressed by this SGMP will be performed under the control and responsibility of Eversource and its LSP during the civil earthwork for the underground transmission line installation and any associated ancillary civil construction such as bridge reconstruction and the construction of an underpass at Chestnut Street. Based on the Project's plans and specifications, work requiring the handling soil and potentially groundwater includes:

- Installation of manholes and duct banks
- Construction of bridge and culvert crossing (Bridge 130 and Chestnut Street underpass required for the MCRT).
- Installation of electrical and signal conduit for MCRT at road crossings
- Rail removal and grading construction platform and installation of stormwater management features, and
- Final grading

It is anticipated that excavation for new transmission lines will require excavating trenches generally five (5) feet wide to depths of five (5) feet below ground surface (ft bgs) and excavating for the installation of 28 manholes every 1,500 to 1,800 feet along the Project's alignment. Each manhole is approximately eight (8) feet wide by eight (8) feet high and 24 feet long. The manhole depth will vary by location, with the base measuring approximately 12 to 15 feet below the proposed final grade. Additional details are provided in the Project's plans and specifications.

1.5 Regulatory Requirements and Applicable Guidance

The soil and groundwater management requirements described in this plan have been developed based on Eversource's *Massachusetts Excess Soil and Groundwater Management Policy* (revised January 2020), the plans and specifications prepared for the Project, and relevant local, state, and federal regulations, policies, and guidance. The due diligence performed, and Project design elements are in accordance with the Massachusetts Department of Environmental Protection (MassDEP) *Best Management Practices for Controlling Exposure to Soil During the Development of Rail Trails* (MassDEP *Rail Trail policy*). The Massachusetts Contingency Plan (MCP) 310 CMR 40.0000 is also the basis for managing OHM encountered on the Project. As noted in this SGMP, additional local, state and federal

requirements may apply during construction of the Project, including MassDEP COMM-97 *Reuse and Disposal of Contaminated Soil at Massachusetts Landfills*.

As noted in Section 1.3, the Project intersects or is adjacent to various natural resource areas. As such, the Project is subject to natural resource/wetland permitting with MassDEP and local conservation commissions in Hudson, Stow, and Sudbury. The activities covered by this plan are subject to various approvals or OOCs imposed by these local and state bodies as well as associated wetland ordinances/bylaws and the MassDEP's Wetland Protection Act Regulations, 310 CMR 10.00. Where these requirements overlap with soil and groundwater management, they are addressed in Section 5.0.

2.0 BACKGROUND

As noted in Section 1.0, the MBTA ROW portion of the Project will be the foundation for a future rail trail completed and maintained by DCR. Given the future use is coupled with the linear nature of the Project and its location predominantly within a former railroad ROW, the MassDEP in their comments to the Environmental Notification Form (ENF) for the Project referenced the use of the *Best Management Practices for Controlling Exposure to Soil During the Development of Rail Trails* guidance document to mitigate potential exposures to OHM for the Project. The specific use of this guidance document was to identify areas of concerns, assess those areas of concern for residual concentration of OHM, and identify best management practices (BMPs) to mitigate potential OHM exposures to construction workers during and future trail users following the Project's completion. Use of the RTG was confirmed during a meeting with the MassDEP Bureau of Waste Site Cleanup staff in 2017.

As described in the RTG, due diligence was conducted between 2015 and 2017 to evaluate potential impacts from known and suspected OHM releases within the project and develop an overall soil and groundwater management strategy that would enable reusing excavated soil where appropriate. Due diligence included review of historic information/photographs, database review of federal, state and local government records, and site reconnaissance to evaluate visual and reasonable identifiable indications of OHM along the Project. Ultimately, the due diligence findings were used to classify segments of the Project as "Rural/Residential" or "Industrial Commercial" as described below:

Rural/Residential

These are stretches along a rail line that border historically residential, undeveloped, or rural properties. These areas are likely to have been affected only by the normal operation of the rail line, with a residual level of contamination. The BMPs outlined in the RTG document are considered appropriate for these locations. Absent evidence of a specific release, segments classified in this group do not require further assessment or sampling and analysis to characterize risk to public health or the environment.

Industrial/Commercial

These are rail trails segments that pass through industrial areas, even the predominantly rural trails of western and central Massachusetts. These stretches have a higher potential for contamination within the right-of-way that is unrelated to the historic railroad use. The BMPs outlined in the RTG document may not be sufficiently protective of public health and the environment at these locations. Further evaluation is needed to establish whether there are site-specific concerns indicating the need for further investigation, including soil testing. Absent a site-specific concern, the RTG indicates that the BMPs outlined in the guidance is appropriate for work in areas designated into this group.

Pursuant to the MassDEP RTG, segments of the Project designated as Industrial/Commercial were targeted, along with the in-road portion of the Project in Hudson, for pre-characterization sampling based on the location of potential sources of OHM, scope of the Project, and associated waste management constraints. Additional justification and clarification on pre-characterization rationale is outlined in the following Sections.

2.1 Environmental Database Review

An environmental database review was completed in 2017 to identify properties and/or known OHM release sites with the potential to impact the Project. The review was completed by VHB using the Environmental Risk Information Services (ERIS) computer database and MassDEP's Bureau of Waste Site Cleanup online data bases. An update was provided to Weston & Sampson by ERIS by in October 2020. A summary of the updated findings is presented below.

Federal Environmental Records			
<i>Record Source</i>	<i>Search Radii</i>	<i>Subject Property Listed</i>	<i>Number of Sites Within Search Distance</i>
National Priorities List (NPL) Sites	1.0 mile	No	0
Safety and Environmental Management System (SEMS) Sites	0.5 miles	No	7
Comprehensive Emergency Response, Compensation, and Liability Information System (CERCLIS) Sites	0.5 miles	No	6
CERCLIS No Further Action Planned (NFRAP) Sites	Property & Abutting	No	4
Resource Conservation and Recovery Act (RCRA) Corrective Action (CORRACTS) Sites	1.0 mile	No	0
RCRA Non-CORRACTS Treated, Stored, and Disposed of hazardous wastes (TSD) Sites	0.5 miles	No	1
RCRA Generators	0.25-miles	No	26
RCRA NonGen (No Longer Generating)	0.25 miles	No	28
Engineering/ Institutional Control Sites	Property & Abutting	No	0
Federal Emergency Release Notification System (ERNS)	Property	No	2
Federal Facility Index System (FINDS)	Property	No	10

State Environmental Records			
<i>Record Source</i>	<i>Search Radii</i>	<i>Subject Property Listed</i>	<i>Number of Sites Within Search Distance</i>
SHWS (MassDEP Disposal Sites)	1 mile	No	186
Solid Waste Disposal Sites	0.5 miles	No	3
Leaking Storage Tank Sites	0.5 miles	No	26
Registered Storage Tank Sites	0.25 miles	No	20
Activity Use Limitation Properties	0.5 miles	No	7
Brownfield Sites	0.5 miles	No	5

As shown above, the environmental database review identified various sites along the Project's alignment, including CERCLIS sites, RCRA generators, registered and leaking underground and or aboveground storage tank sites, and MassDEP Disposal Sites. Available information for these Disposal Sites was subsequently reviewed to assess each sites potential to impact the Project, and those sites considered to have potential to impact the Project are discussed below. The 2020 ERIS database report is provided in Appendix B.

2.1.1 Hudson – In-Road & MBTA ROW Portion

The environmental database review identified a total of 104 MassDEP Disposal Sites within a 1-mile radius of the Hudson portion of the Project. Among the 104 sites, a total of six (6) were determined to have the potential to impact the Project and were therefore further evaluated. These sites included one (1) located within the in-road Hudson portion and five (5) sites located in the MBTA ROW Hudson portion of the Project. The last known status of these sites is described below. The sites are listed in order from the Project start to the Hudson/Sudbury municipal border.

Release Tracking Number (RTN) 2-10202 | Figure 2 – Sheet 1

The property located at the western end of the Project with an address of 49 Forest Avenue is identified as Hudson Light and Power Department is listed in the Aboveground Storage Tank (AST), RCRA-Small Quantity Generator (SQG), FINDS, UST, HW GEN, SHWS, and Release databases associated with the property's use as an electrical substation. It should be noted that a second property owned by Hudson Light and Power is also listed in the ERIS report, however this property is located approximately 400 feet North of the Project area and is therefore not considered a concern. The property has two permits for ASTs that are currently active. The property is listed in the RCRA-SQG and RCRALQG databases for the generation of ignitable waste. One former 4,000-gasoline UST was removed from the property in October 1997. No additional information regarding the removal of the UST was obtained. The property is listed in the SHWS and Release databases for the release of 20 gallons of diesel fuel assigned Release Tracking Number (RTN) 2-10202. The release achieved as Class A-1 RAO in April 1994 indicating a Condition of No Significant Risk and contamination was removed to background conditions.

Based on current Site conditions, this Disposal Site is considered unlikely to impact environmental conditions within the Project area; however, we will be continuously evaluating if a potential exists from the current operations of the property as an electrical substation and associated USTs and ASTs during construction.

RTN-2-20907 | Figure 2 – Sheet 2

The property located on Chestnut Street is identified as Chestnut Street Well and is listed in Tier Classified Oil and/or Hazardous Material and Release databases. The property was assigned RTN 2-20907 in August 2016 after PFAS compounds were detected in the Town of Hudson Public Water Supply wells known as Chestnut Street Well #1, Chestnut Street Well #2, Chestnut Street Well #3, and Kane Well. The source of PFAS contamination is unknown, and as a result, MassDEP issued several Request for Information (RFIs) to industrial owners in proximity to PFAS-impacted wells to better identify current and historic use or storage of PFAS materials at these manufacturing facilities.

In July 2019, MassDEP received a PFAS Source Assessment Summary Report from Corporate Environmental Advisors (CEA). The report identified thirteen (13) production and manufacturing facilities within the study area who are potential sources of PFAS. As of January 2020, MassDEP is continuing to

sample monitoring wells surrounding the Hudson Water Supply Wells while waiting for remaining RFI replies.

Based on the conditions at this Disposal Site, there is a potential to impact environmental conditions within the Project area based on the location of the impacted wells and their proximity to the Project as well as the lack of available information regarding potential PFAS sources from industrial property use in the area. We will be continuously evaluating the potential for impacts associated with this RTN to encroach on the Project area as more information becomes available; however, no impacts have yet been identified.

RTN-2-20923

The property located on 308 Chestnut Street is identified as Chestnut Street PFAS is listed in the Release database. The property was assigned RTN 2-20923 in June 2019 following the detection of PFAS in the on-site private drinking water well. Subsequent investigations identified PFAS in several other private wells within 599 feet of the 308 Chestnut Street property; requiring MassDEP to provide bottled drinking water and install point of entry treatment (POET) systems. As of March 2020, MassDEP continues to monitor and sample these POET systems, with limited additional investigation performed to assess the nature and extent of the PFAS impacts. The source of PFAS contamination is currently unknown; however, the property is located approximately 4,300 feet to the south-southwest of Project.

Based the location of the impacted well and the proximity to the Project, this Disposal Site is considered unlikely to impact environmental conditions within the Project area. We will be continuously evaluating the potential for impacts associated with this RTN to encroach on the Project area.

RTN 2-68 & 2-16560 | Figure 2 – Sheet 3

The property located at 555 Main Street in Hudson identified as Arrow Automotive Industrial Incorporated was listed in the LAST, LUST, Spills, RCRA Non-Gen, and SHWS databases. The property was assigned RTN 2-68 in 1987 due to historical volatile organic compound (VOC) impacts from leaking storage containers. Subsequent assessment activities identified VOCs in groundwater across the property and downgradient of the property to the north and northwest. A Class C-1 RAO (i.e. Temporary Solution) was submitted in May 2000 and later revised in April 2001 to include revisions such as the abutting properties connection to municipal sewer.

According to available records, in the course of investigation RTN 2-68 additional VOC exceedances in groundwater were identified and assigned RTN 2-16560. This Disposal Site was linked to the primary RTN and all response actions are being conducted under the Temporary Solution for RTN 2-68. According to the most recent status report submitted in August, concentrations of VOCs appear to be decreasing, but remain above applicable regulatory standards.

Based on the regulatory status of the property, the proximity to the Project area, and the north – northwesterly flow of groundwater towards to the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN-2-275 | Figure 2 – Sheet 3

The property located at 560 Main Street is identified as M&M Drilling Kane Perkins was listed in the RCRA-Conditionally Exempt Small Quantity Generator (CESQG), RCRA Non – Gen, Spills, UST, Release and SHWS (i.e. MassDEP Disposal Site) databases. The property was assigned RTN 2-275 in

September 1987 for the discovery of approximately thirty (30) 55-gallon drums containing oil. Upon further assessment, it was determined that petroleum impacts from the 55-gallon drums was only limited to surficial soils up to 2 feet below ground surface (bgs). Petroleum-impacted soil was removed from the property during Release Abatement Measure (RAM) activities. The disposal site achieved a Class A-2 Release Action Outcome (RAO) in June 1995, which indicates that a Condition of No Significant Risk was achieved; however, contaminant concentrations were not reduced to background. Also, the disposal site boundaries appear to encroach upon the Project Area.

Based on residual contamination still being present and the proximity to the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

566 Main Street | Figure 2 – Sheet 3

The property identified as Rich's Auto Parts Incorporated located at 566 Main Street situated directly north of the Project area is listed in the FINDs, ICIS, and RCRA Non-Gen databases. Although no documented releases are recorded for the property, the industrial operations conducted at the property have the potential to have resulted in undocumented releases of OHM. with the potential to impact environmental conditions within the Project area.

Based on industrial operations performed near the Project, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN-2-248 & RTN 2-20439 | Figure 2 – Sheet 3

The property located at 51 Parmenter Road is identified as Boyd Coatings Research Co., Inc. and is listed in RCRA Small Quantity Generator (SQG), Tier Classified Oil and/or Hazardous Material and Release databases. The property was assigned RTN 2-248 in May 1987 and RTN 2-20439 in January 2018.

RTN 2-248 was assigned after detecting trichloroethylene (TCE), 1,2-dichloroethylene (DCE), ethylbenzene, and xylenes in water samples. In July 1987, the equivalent of a Phase I and Phase II report was submitted to DEP identifying an abandoned septic tank east of the building as the source of TCE contamination in the form of a one-time release. This resulted in further assessment in the form of periodic sampling which suggested the source of the contamination was no longer present as concentration continuously decreased over time. In 1994, the only VOC detected was toluene at concentration well below the Reportable Concentration which led to the property being classified as Tier IA (now retired) and achieving a Class B-1 RAO indicating no further action is warranted because a level of No Significant Risk exists.

In January 2018, MassDEP assigned a new RTN, 2-20439, to the property after sampling of the Town of Hudson's Cranberry Bog Supply Well identified perfluoralkyl substances (PFAS). According to the Notice of Responsibility (NOR), the RTN was assigned to the property due to its proximity to the supply wells and because MassDEP believed that historic industrial operations at property involved PFAS. As such, a NOR was issued to the former owner/operator, Boyd Coatings, as well as the current owner (Dylan Limited Partnership) and operator (Precision Coating Co., Inc.). The NOR also indicated that the PFAS detection constituted a Condition of Substantial Release Migration (SRM), requiring Immediate Response Actions (IRA) under the MCP.

In response to the NOR, IRA activities were initiated to investigate the nature and extent of PFAS impacts. To date, the IRA-related investigation activities have identified PFAS compounds in soil at the property, groundwater wells at or near the property, stormwater runoff from the property, and in drinking water samples collected from the Cranberry Bog supply well and twenty-two (22) nearby private wells.

Based on the PFAS investigations conducted to date identifying PFAS-impacted groundwater in the area surrounding the property, including to the north and south of the MBTA ROW portion of the Project, this Disposal Site has the potential to impact environmental conditions within the Project area. We will be continuously evaluating the potential for impacts associated with this RTN to encroach on the Project area.

2.1.2 Stow – MBTA ROW Portion

The environmental database review identified a total of eight (8) MassDEP Disposal Sites within a 1-mile radius of the Project in Stow. Among the eight (8) sites, a total of four (4) sites were determined to have the potential to impact the Project. A summary of the sites last known status are listed below.

RTN 2-722 | Figure 2 – Sheet 4

The property identified as Fort Devens Training Annex in Stow was listed in the Superfund and SHWS databases. The property was assigned RTN 2-722 in January 1990 for the identification of 73 study areas and areas of concern (AOCs), which had evidence of contamination from a variety of sources. The Disposal Site identified as AOC 10 and P32 was identified as a location of a railroad pit and former UST area where residents in the area reportedly dumped waste automotive oil. The former USTs have been pumped out and filled with water and the property is included in an arsenic investigation. The Disposal Site is listed as Adequately Regulated due to the Disposal Site status as an EPA Superfund Site. The listing was removed from the Superfund National Priorities List (NPL) in 2002.

Based on its former status as a Superfund Site and the proximity to the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN-2-20337

The property located at 220 and 216 Barton Road is identified as Barton Road Neighborhood is a residential area listed in the MassDEP Disposal Site Release database. The property was assigned RTN 2-20337 in October 2017 after the Nashoba Board of Health informed MassDEP of the discovery of chlorinated solvents, including trichloroethene (TCE) and 1,4-dioxane, at concentrations above drinking water standards in three (3) private drinking water wells. Upon further assessment, it was determined that multiple surrounding properties were also affected, although the source of the contamination is unknown.

In response to detecting contaminants in the several private drinking water wells, MassDEP installed POET systems at several affected properties, which they continue to monitor to ensure the effective removal of TCE and other contaminants of concern. To date, limited additional investigation to evaluate the nature extent of contamination has been performed.

Based on the closest affected private drinking water well located approximately 3,600 feet north of the Project, this Disposal Site is considered unlikely to impact environmental conditions within the Project area.

RTN-2-21045

The property located at 664 Sudbury Road is a Massachusetts Department of Fire Services (DFS) Firefighting Academy and is a listed MassDEP Disposal Site that was assigned RTN 2-21045 in October 2019. The RTN was assigned after results from a September 2019 PFAS investigation by MassDEP identified a Condition of Substantial Release Migration (SRM) associated with PFAS detected in surface water at White Pond. Additional investigations subsequently detected elevated total PFAS concentrations in soil, groundwater, sediment, and surface water samples collected at the property.

In December 2019, GZA Geoenvironmental, Inc. prepared and submitted an initial Immediate Response Action (IRA) Plan, which include provisions for conducting additional investigations to assess the nature and extent of PFAS. Based on the investigations conducted to date, the source of PFAS-impacted areas on property is believed to be historic use of aqueous film-forming foams (AFFF) during historic fire training exercises and the introduction of PFAS-impacted water from the existing potable water supply system (White Pond). The main impacted media and migration pathway for PFAS compounds appears to be movement through the wetland area at the western end of property toward surface water bodies; although, groundwater on property is also impacted and generally flows from the northeast to southwest towards White Pond.

Based on the property's proximity to the Project area being approximately 4,600 feet to the north-northeast, this Disposal Site is considered unlikely to impact environmental conditions within the Project area.

RTN-2-21116

The property located at 501 Gleasondale Road is identified as Gleasondale Mill is listed in the MassDEP Disposal Site Release database. The property was assigned RTN 2-21116 in December 2019 after an investigation of PFAS detected in Hudson's Chestnut Street public water supply resulted the detection of PFAS in private supply well and additional monitoring wells on property. The source of PFAS in groundwater is unknown; however, based on previous groundwater sampling locations, a potential source area may be located on the southern portion of the property.

In August 2020, Stow Industrial LLC, current owner and operator of property, submitted an IRA plan to MassDEP addressing the presence of PFAS in groundwater and associated SRM condition. Conditional approval of IRA plan was granted in September 2020. IRA activities are currently ongoing, which include limited on-site soil and groundwater testing and off-site testing of several private water supply wells. According to MassDEP records, the IRA-related sampling has yet to be conducted.

Based on the property's proximity to the Project area being approximately 3,200 feet to the north, this Disposal Site is considered unlikely to impact environmental conditions within the Project area; however, conditions associated with the site will be continuously evaluated.

2.1.3 Sudbury – MBTA ROW Portion

The environmental database review identified a total of 59 MassDEP Disposal Sites within a 1-mile radius of the Project in Sudbury. Among the 59 sites, a total of five (5) were determined to have the potential to impact the Project. A summary of the sites last known status are listed below in order from the Hudson/Sudbury municipal border to the Sudbury Substation off Route 20.

RTN 3-24573 | Figure 2 – Sheet 5

The property identified as Former Rod and Gun Club located at 33 Bulkley Road was listed in the CERCLIS, SEMS, Spills, and Release databases. The property was assigned RTN 3-24573 in January 2005 for the identification of lead in surficial soils associated with the property's former operation as a recreational shooting range. Impacted soils were removed and confirmatory soil sampling determined that all lead concentrations were below the applicable standards. A Class A-1 RAO was submitted in March 2005, which indicates that a Condition of No Significant Risk was achieved, and contamination has been reduced to background.

Based on the property's current regulatory status, this Disposal Site is considered unlikely to impact environmental conditions within the Project area.

RTNs 3-3037 & 3-27243 | Figure 2 – Sheet 7

The property located at 528 Boston Post Road was listed in the RCRA-TSD and SHWS databases for the property's use as a Raytheon facility. The property was assigned RTN 3-3037 in April 1990 due to the presence of chlorinated volatile organic compounds (cVOCs) such as Trichloroethene (TCE) in groundwater. In addition, a release of 35 gallons of No. 2 heating oil occurred at the property in 1987, which was also addressed under RTN 3-3037. It was determined that release conditions did not warrant inclusion in the MassDEP's Locations to be Investigated List for potential Disposal Sites in 1990 as all soil concentrations were below regulatory standards in effect at the time. RTN 3-3037 achieved regulatory closure with MassDEP in 1997 under the condition of Pending No Further Action.

Raytheon continued to monitor groundwater quality at the property until 2007 when the elevated concentrations of cVOCs in groundwater were reported to MassDEP and assigned RTN 3-27243. In November 2008, the Disposal Site achieved a Class C-1 RAO, which is a Temporary Solution consisting of periodic groundwater sampling to monitor for natural attenuation. The most recent Class C-1 RAO Status Report in March 2017 for the Site indicated that all groundwater concentrations were below the applicable standards.

Between November 2016 and August 2018, several RAM Plans were filed on behalf of private developers to manage contaminated materials during redevelopment of the former Raytheon industrial facility. According to latest Post-Temporary Solution Status report filed for RTN 3-27243 in November 2018, the RAM activities/site redevelopment have had little impact on overall site conditions. Isolated areas of elevated CVOC concentrations exceeding the GW-1 standards continue to persist at the site.

Based on the site's location, the northwesterly flow of groundwater towards the Project area, and the regulatory status of the property, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN 3-74 | Figure 2 – Sheet 7

The property located at 33 Union Avenue identified as Coatings Engineering was listed in the RCRA Non-Gen, RCRA-Small Quantity Generator (SQG), UST, Spills, and SHWS databases. A least 10 former USTs were located on the property there had been removed by June 1987. The property was assigned RTN 3-74 in February 1986 for the identification of elevated levels of cVOCs in groundwater at the Disposal Site due to the former manufacturing of coated wire products. Groundwater monitoring was conducted from 2002 until 2012 to evaluate cVOC concentrations under Remedy Operation Status (ROS). A Class C-2 RAO (i.e. Temporary Solution) was submitted in April 2014. According to the most

recent Status Report submitted for the Site in April 2017, elevated levels of cVOCs were detected above the Method 1 GW-1 Standard in a monitoring well identified as RIZ-1 located approximately 75 feet south of the Project area with the Disposal Site boundary extending into the southern portion of the Project. Depth to groundwater at the property ranges from approximately 1.26 to 6.13 ft bgs.

Based on the regulatory status of the property and the location of the Disposal Site within the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN 3-2640 | Figure 2 – Sheet 7

The property located at 39 Union Avenue identified in Mullen Lumber was listed in the Release database and assigned RTN 3-2640 in 1990 for the identification of 1,1,2-trichloroethane and 1,2-dichloroethane within groundwater at the property. The Disposal Site boundary is directly along the boundary between 39 Union Avenue and the Project area and is therefore conservatively assumed that impacts extend into the Project area. Reports infer that impacts are a result of groundwater migration from RTN 3-74 discussed above but the site is not eligible for a Downgradient Property Status (DPS). A Class C-1 RAO (i.e. Temporary Solution) was submitted in August 1997. According to the Five-Year Periodic Review of the Temporary Solution submitted in December 2012, groundwater at the Disposal Site continues to exceed the applicable Method 1 GW-1 standards in wells located closest to the Project area. Depth to groundwater at the Disposal Site ranges from approximately 1.21 to 6.89 ft bgs.

Based on the regulatory status of the property, depth to impacted groundwater at this property and the close proximity to the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

38-40 Station Road | Figure 2 – Sheet 7

The property identified as Mosher Auto Body located at 34 Station Road situated directly north of the Project area is listed in the FINDs databases for the property's use as an automotive repair shop. The property is also listed in the RCRA-CESQG database for the property's generation of ignitable waste and nonhalogenated solvents. The property has received several written informal violations regarding the generation of this waste.

Based on the history of violations and the close proximity of hazardous materials storage to the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN 3-15581 | Figure 2 – Sheet 7

The property identified as Mill Village located at the intersection of Concord Road and Boston Post Road in Sudbury, north of the Project area is listed as having achieved a Class B-1 RAO on September 29, 1997. Chlorinated solvents, specifically vinyl chloride, were identified on the property in exceedance of MCP thresholds in 1994 but not reported until 1997.

Based on current regulatory status, this Disposal Site is unlikely to impact environmental conditions within the Project area.

RTN 3-33240 | Figure 2 – Sheet 8

The property located at 209 Boston Post Road was listed in the LUST, Spills, UST, and Release databases. Four USTs were formerly located at the property and two USTs are currently in use. RTN 3-33240 was assigned in November 2015 for the identification of petroleum constituents in soil following

the removal of a UST. During assessment activities, over a foot of separate-phase petroleum product (gasoline) was identified in groundwater at the property. Following the completion of a Phase I Investigation Report and Phase II Comprehensive Site assessment the limits of the LNAPL were defined, impacted soil has been removed, and the Disposal Site was classified as a Tier II Disposal Site. The Phase III Feasibility Study and Remedial Action Plan report concluded and selected a down well skimmer remedial solution as the best available technology for LNAPL recovery. According to the RAM Completion Report submitted in June 2020, approximately 639 gallons of LNAPL have been collected from several monitoring wells installed on site, including wells located approximately 150 feet north of the Project. The remedial system was constructed and online by July 2020, and since its startup has recovered approximately 73 gallons of LNAPL as of October 2020, as stated in the latest Phase IV Status Report and Remedial Monitoring Report submitted in November 2020. Regulatory closure has not been achieved and periodic monitoring will continue to determine the effectiveness of the system to recover and control NAPL migration potential.

Based on the regulatory status of the Disposal Site and the proximity to the Project area, this Disposal Site has the potential to impact environmental conditions within the Project area.

RTN 3-27224 | Figure 2 – Sheet 8

The property identified as Sudbury Automotive located at the intersection of Route 20 and Landham Road is listed in the historical leaking underground storage tank (LUST), SHWS, and Spill databases for a release of gasoline from a former UST at the property. Approximately 50 to 100 gallons of gasoline impacted soil at the property due to an overfill. The Spill ID is N91-1290 and the spill has since achieved closure. A release identified under RTN 3-27224 occurred at the property in October 2007 and achieved closure under a Utility-Related Abatement Measure (URAM) in March 2008.

Based on the release impacts limited to soil and the location of the Disposal Site greater than 250 feet north to the Project area, this Disposal Site is considered unlikely to impact environmental conditions within the Project area. However, conditions associated with LUST closure are unknown and may present a risk to environmental conditions within the Project area, which was already identified as a concern under RTN 3-33240.

2.1.4 Environmental Database Review Summary

As described in the preceding sections, the environmental database review identified 15 sites with the potential to affect soil and groundwater conditions along the Project. The 2017 environmental database review results were subsequently used to inform site reconnaissance according to DEP's RTG of the MBTA ROW portion of the Project, which is described in Section 2.1.5. Results were also used to inform soil and groundwater pre-characterization, with locations preferentially selected near sites of potential concern. Soil and groundwater pre-characterization is described in Section 2.2.

2.2 Site Reconnaissance & ROW Classifications

Based on the findings above, a site reconnaissance was conducted by VHB in 2015 and 2017 to evaluate site conditions for the MBTA ROW portion of the Project for visual and/or reasonably identifiable indicators of OHM. The site reconnaissance identified the former rail line along the entire length with rail spurs noted in several locations. Urban fill material (i.e., soil containing asphalt, bricks and debris) was also observed in addition to coal slag at the Geasondale Station.

2.2.1 Railroad ROW History

According to historical railroad plans, the former railroad was historically owned and operated by the Boston and Maine Railroad, and there were five former railroad stations adjacent or within the Project area.

Station	Town	Location	Years of Operation
Gleasondale	Hudson	Along Chestnut Street	1881 to 1965
Ordway		Along Parmenter Road	1902 to 1965
Wayside Inn	Sudbury	Along Dutton Road	1881 to ~1940
South Sudbury		97 Union Road	1881 to 1971
East Sudbury		Along Landham Road	1887 to 1971

As noted previously, the Central Massachusetts Railroad operated from at least 1881 until 1971. According to historic records, construction of the railroad line began in 1870 and was acquired by the Boston and Maine Railroad by 1887. Records also indicate there were historic train derailments within the Project Area in 1955 and 1978, and that the Wayside Inn Station in Sudbury was destroyed by a fire in 1940. These events may have contributed to the presence of oil and/or hazardous materials (OHM) in the ROW.

2.2.2 ROW Classifications

Pursuant to MassDEP RTG and findings of the 2017 environmental database review and site reconnaissance, the MBTA ROW portion of the Project was divided into Rural/Residential and Industrial/Commercial segments. Four (4) segments were established which are shown on Figure 2 and further discussed below:

- Segment 1 Rural/Residential** - extends from the beginning of the MBTA ROW portion of the Project in Hudson at STA 100+00 to approximately STA 150+00, and is classified as Residential, Rural, or Undeveloped. According to historical information, only one railroad station was located within this segment. Based on review of available documents, there are no reported releases associated with this station; however, coal slag was identified at the former Gleasondale Station during site reconnaissance. As outlined in the RTG, due to the presence of potential contamination at the station location, additional assessment is recommended with isolated soil testing at this location. However, with exception of the Gleasondale Station (STA 130+00 to 132+76), the remainder of the segment is considered likely to have been affected only by normal operations of the rail line, with a residual level of contamination. The BMPs outlined in the RTG are appropriate for the remaining portion of the segment due to the absence of any releases within this area.
- Segment 2 Industrial/Commercial** - includes the portion of the MBTA ROW in Hudson, extending from STA 150+00 to STA 307+70, and is defined as an Industrial Corridor due to the industrial nature of the surrounding properties and the presence of four (4) nearby Disposal Sites with the potential to impact the Project are located within this segment (see Figure 2 – Sheets 2 and 3). Additionally, there are various industrial businesses that use hazardous materials in their day-to-day operations, including a concrete plant, plastic manufacturer, an automotive repair facility, that abut the Project. Therefore, this stretch is considered to have a higher potential for contamination beyond what is expected for normal rail line use. According to historical information, only one railroad station is located within this segment, and based on visual

observations and a review of available documents, there is no known releases or evidence of contamination associated with the Ordway Station.

- **Segment 3 Rural/Residential** - begins at STA 307+70 in Hudson, passes through Stow and ends at approximately STA 569+61 in Sudbury. Segment is defined as Residential, Rural, and Undeveloped with exception of the Fort Devens Training Annex RTN 2-722 (STA 360+15 to 362+90). Based on the environmental database review, there are two Disposal Sites within this segment; neither of which is expected to impact the Project.
- **Segment 4 Industrial/Commercial** - runs from STA 569+61 to the Project end at STA 767+20.85. This segment of the Project area is defined as an Industrial Corridor due to the industrial nature of the surrounding properties and proximity of multiple Disposal Sites. As depicted on Figure 2 – Sheets 7 and 8, five of the Disposal Sites with the potential to impact the Project are located within this segment. According to historical information, the segment also contained two stations, identified as East Sudbury Station and South Sudbury Station; however, based on visual observations and a review of available documents, there is no evidence of contamination associated with these stations.

Note that the re-use of soil during Project construction will be limited by results of any characterization (i.e., testing) performed but also by the segment classification described above. Soil in the MBTA ROW portion of the Project may only be re-used within a similar segment classification (i.e., Industrial Commercial soils may only be re-used in an Industrial/Commercial segment and efforts should be made to re-use soil as close to the point of generation as possible. Although the MassDEP RTG does not specify a limitation for the reuse of soil within similarly classified segments (i.e. Industrial only within Industrial), Eversource and DCR have adopted this conservative soil management approach. Therefore, soils generated from construction activities will be managed separately depending on their classification, both within the ROW as well as at off-site laydown areas.

Right of Way Rail Trail Classifications			
Project Segments		Project Stationing (STA)*	
		Begin	End
Segment 1	Rural/Residential	100 + 00	130 + 00
	Industrial/Commercial	130 + 00	132 + 76
	Rural/Residential	132 + 76	150 + 00
Segment 2	Industrial/Commercial	150 + 00	307 + 70
Segment 3	Rural/Residential	307 + 70	360 + 35
	Industrial/Commercial	360 + 35	363 + 05
	Rural/Residential	363 + 05	569 + 61
Segment 4	Industrial/Commercial	569 + 61	767 + 21

*Stationing from Sudbury-Hudson Transmission Reliability Project Plans dated October 2020.

The 2015 and 2017 site reconnaissance resulted in the Project being divided into the segments as discussed above which directly influenced the location and frequency of samples to be taken during the re-characterization sampling program. For example, soil and groundwater samples were only taken in the in-road and “Industrial/Commercial” segments of the Project. Further details on the site pre-characterization sampling program are described in the following section.

2.3 Pre-Characterization Sampling Program

Based on the findings above, a soil and groundwater pre-characterization sampling program was completed in 2018 to assess the presence of OHM within the in-road and Industrial/Commercial segments of the MBTA ROW portions of the Project and to identify applicable BMPs for handling excavated soil and groundwater during future construction. The program was conducted concurrent with a geotechnical subsurface exploration and included advancing soil borings, installing monitoring wells, and soil and groundwater sampling and analysis. Areas targeted for investigation included sites of potential concern described in Section 2.1 and identified in the VHB ROW table in Appendix C, as well as the following:

- Segment 1 was classified as residential, rural, and undeveloped and therefore MassDEP RTG BMPs would apply and sampling would only be required at the Gleasondale Station due to evidence of contamination (coal slag) identified during Project reconnaissance.
- Segment 3 was characterized as residential, rural, and undeveloped; however, one disposal site of concern is located within this segment which is also the location of Mirror Lake Junction where historical collisions took place. As such, sampling was conducted at Mirror Lake Junction.
- The in-road portion

The soil boring and monitoring well locations are shown on Figure 2.

2.3.1 Subsurface Conditions

In 2018, geotechnical investigations were completed by Lahlaf Geotechnical Consulting, Inc. (LGCI), to gather subsurface information and provided recommendations regarding foundation design and construction along the Project. To assess subsurface conditions, LGCI oversaw a total of sixty-six (66) borings, with thirty-three (33) borings completed in Hudson and thirty-three (33) borings completed in Sudbury. According to the geotechnical explorations, subsurface conditions consisted of the following:

- Asphalt was encountered only in Hudson at depths ranging between 0.7 to 0.9 ft bgs.
- Surficial organic topsoil and subsoil, generally made up of silty sand with organic fines, roots, leaves, grass, and wood, encountered less than 1.5 feet thick in Hudson and 0.5 in Sudbury; however, the thickness ranged between 0.1 and 4 feet in Hudson and 0.1 and 2 feet in Sudbury,
- Fill, mostly poorly graded sand and some silty sand or well graded sand, encountered at ground surface and/or underneath the asphalt or surficial organic layers at various locations in Hudson and Sudbury. Fill depths extended up to 11 ft bgs; however, one location fill was encountered at the termination depth of 16 ft bgs. Note, fill along the abandoned MBTA railroad contained traces of organic fines, coal ash, coal, slag, roots, and wood,
- Buried Organic Soil and Swamp Deposits, generally made up of fibrous peat, organic fines, roots, and wood, encountered beneath the fill and extended to depths up to 10 to 11 ft bgs in Hudson and Sudbury. Note, in Hudson there were a few instances of buried organic soil depths extended up to 20 to 25 ft bgs and swamp deposits were only located in Sudbury,

- Sand, mostly well graded sand and silty sand with some poorly graded sand, encountered beneath the asphalt, surficial organic soil, fill, or buried organic soil and extended to boring termination depths at all locations with few exceptions in Hudson and Sudbury
- Bedrock, hard, slightly weathered, slightly fractured, fine-grained, gray with black mottles Granite, encountered in Sudbury at depths ranging between 6 to 18 ft bgs. Bedrock was not encountered in any of the borings completed in Hudson, however boulders were encountered at depths of 6 ft bgs

In addition, to characterizing soil conditions as part of their investigation, LCGI also evaluated groundwater levels during drilling. According to LCGI observations, groundwater was encountered at every soil boring location with few exceptions. Where encountered, groundwater was observed to be between 4 and 15 ft bgs along the MBTA portion of the Project and 5 to 10 ft bgs along the in-road portion of the Project. Using these depths and the corresponding soil information from the soil borings, LCGI estimated groundwater infiltration flow rates between 1,000 to 4,000 gallons per day for the proposed vault excavation and 10 to 40 gallons per day per foot of transmission line trench.

Further details regarding soil conditions along the Project are provided with the LCGI investigation report provided in Appendix D.

2.3.2 Soil Sampling & Analysis

Soil samples to assess the presence of OHM within the Project area, herein referred to as environmental borings/samples, were collected from select soil borings completed in Hudson and Sudbury to support Project design. These environmental borings were advanced by hollow stem auger or tripod methods, and four discrete samples were collected from each location using two-foot split spoons. Samples were then logged for their physical characteristics (i.e., grain size, moisture content, etc.) and evaluated for visual and olfactory contamination. Samples were also screened for volatile organic compounds (VOCs) using a photoionization detector (PID). The PID screening resulted in <3 parts per million volume (ppmV) at most sample locations except for seven (7) locations in Hudson that resulted in a range of 19 – 80 ppmV. The environmental soil boring logs and corresponding PID results are provided in Appendix E.

In addition to assessing potential impacts through field screening, samples were collected from each environmental boring (i.e., a boring used to evaluate for the presence of contaminants vs. geotechnical properties) and submitted for laboratory analysis to evaluate potential contamination and identify preliminary disposal categories for excavated soil. In general, samples to pre-characterize excavated soils were collected at a frequency of 1 sample per 500 cubic yards of expected soil to be handled. Sample depths were selected to coincide with proposed depths of construction, generally 12 ft. bgs for proposed manholes and 7 ft bgs along the proposed duct bank. A summary of sample depths by location is provided in Appendix C.

Samples for disposal characterization included one discrete sample based on field screening results from each boring for laboratory analysis of VOCs by EPA Method 8260. A vertical composite from the anticipated depth of construction was also collected for analysis of the remaining disposal characterization parameters. The disposal characterization laboratory analysis was conducted by Con-Test Analytical Laboratories according to MassDEP's Policy# COMM-97-001. Laboratory analyses included the following:

- Total Petroleum Hydrocarbons (TPH), Method SW-846 8100 Modified
- VOCs, EPA Method SW-846 8260C
- Semi-volatile organic compounds (sVOCs), EPA Method SW-846 8270D
- RCRA-8 Metals by Method SW-846 6010D and 7471B
- Polychlorinated biphenyls (PCBs), Method SW-846 8082A
- Herbicides, Method SW-846 8151A
- Organochlorine Pesticides, Method SW-846 8081B
- Reactive Sulfide & Reactive Cyanide, Method SW-846 9014/ 9030A
- Ignitability, SW-846 1030
- Conductivity, SM21-22 2510B Modified
- Corrosivity (pH), Method SW-846 9045C

Laboratory data reports are provided in Appendix F. Assessment and remediation of hazardous waste sites in the state of Massachusetts are governed under the Massachusetts Contingency Plan (MCP, 310 CMR 40.0000) enacted under M.G.L. C. 21E. Therefore, to determine potential regulatory obligations resulting from pre-characterization sampling, results of soil analysis compared to the MCP Reportable Concentrations for Soil Category 1 (RCS-1), which is applicable due to the presence of residences within 500 feet of the Project.

2.3.2.1 Hudson In-Road Results

Between June 2018 and August 2018, twenty (20) soil samples from select soil borings were collected for laboratory analysis. The sample locations are shown in Figure 2, Sheet 1. The laboratory results are summarized in Table 1.

Soil samples from the in-road portion of the Project contained various metals, pesticide, semi-volatile organic compounds (SVOCs) and petroleum hydrocarbon concentrations. Where detected, the concentrations were below their respective MCP RCS-1 standards, except for the concentration of hexachlorobenzene at MP-5 and benzo(a)pyrene at MP-2, MP-5 and MP-21.

2.3.2.2 Hudson Rail ROW Results

Between May 2018 and June 2018, thirty-two (32) soil samples from select soil borings were collected for laboratory analysis. The sample locations are shown in Figure 2, Sheets 2 through 4. Sampling results are summarized in Table 2. As shown, soil samples from the MBTA ROW portion of the Project in Hudson contained various metals and TPH concentrations. Where detected, the concentrations were all below their MCP RCS-1 standards.

2.3.2.3 Sudbury MBTA ROW Results

Between October and November 2018, twenty-nine (29) soil samples from select soil borings and one test pit sample (MP40) were collected for laboratory analysis. The sample locations are shown in Figure 2, Sheets 4 through 8. The laboratory results are summarized in Table 3.

Soil sampling results from the Sudbury ROW identified various metals, petroleum hydrocarbons, and SVOCs concentrations. Where detected concentrations were below their respective MCP RCS-1 standards, except for the following:

- Arsenic concentrations at MP34 (21 mg/kg) and SB36 (21 mg/kg) exceeded the MCP RCS-1 standard of 20 mg/kg.
- Two polycyclic aromatic hydrocarbons (PAHs) concentrations, benzo(a)pyrene at MP-33 and phenanthrene at MP34, were equal to their respective MCP RCS-1 standards.
- The TPH concentration at SB42 equaled the MCP RCS-1 standard of 1,000 mg/kg.

The detection of these contaminants at concentrations equal or exceeding their respective MCP RCS-1 standards were subsequently considered to be exempt from notification according to the MCP. The exception from notification was based on the following:

- Arsenic is a commonly detected contaminant of concern within railroad ROWs, having been used historically in various lead-arsenate pesticides as well as frequently detected in coal and coal ash. As such, the detection of arsenic is considered exempt from notification according to the MCP 310, CMR 40.0317(8), which states OHM releases result from the application of pesticides in a manner consistent with the labelling, and 310 CMR 40.0317(9), covering OHM related to coal and coal ash.
- PAHs are commonly detected contaminants in ROW and other areas of historic railroad operations. Although detected at concentrations equal to their respective MCP RCS-1 standards, they were considered exempt according to 310 CMR 0317 because the source of the PAHs was attributed to coal and coal ash. Additionally, these concentrations are consistent with background levels for soil containing coal or coal ash as listed in MassDEP's 2002 technical update Background Levels of Polycyclic Aromatic Hydrocarbons and Metals in Soil.
- TPH is a screening level analysis that is typically used where there is no known release of specific petroleum hydrocarbons. Based on the location of SB42 at the intersection of two public roadways associated Station Road and Boston Post Road, the observed concentrations of TPH in the soil sample can likely be attributed to the normal operations of motor vehicles. Vehicle emissions typically contain low levels of petroleum constituents as well as PAHs. Due to the low levels of TPH at the MCP RC and the low detections of other PAHs such as benzo(a)pyrene, benzo(g,h,i)perylene, benzo(k)fluoranthene, and pyrene, the concentration of TPH in the soil sample associated SB42 is likely attributable to emissions from the exhaust of an engine and is considered exempt from reporting under 310 CMR 40.0317(8)(b). In addition, petroleum residues that are incidental to the normal operation of motor vehicles meet the definition of Anthropogenic Background conditions in accordance with 310 CMR 40.0006.

2.3.3 Groundwater Sampling & Analysis

To characterize groundwater within the Project area, select soil borings were completed as groundwater monitoring wells. As mentioned previously, well locations were installed to sample groundwater in areas that were considered to have the potential to impact the Project based on the environmental database review and site reconnaissance conducted. The wells were constructed using 1- or 2-inch polyvinyl chloride (PVC) riser and a minimum 10-feet of slotted screen set. Groundwater monitoring well locations are shown in Figure 2. Monitoring well construction logs are provided in Appendix E.

Following installation, each newly installed well was developed by purging several well volumes (20 to 30 gallons) using a submersible pump. After allowing the wells to equilibrate, samples were collected using the Environmental Protection Agency (EPA) low flow sampling technique, using a peristaltic pump

and lab grade silicon tubing attached to disposable polyethylene tubing set to the midpoint of the saturated screen, to minimize turbidity. These samples were field preserved and submitted to ConTest for analysis of:

- VOCs, by EPA Method 8260
- Polychlorinated Biphenyls (PCBs), by EPA Method 8082
- RCRA-8 Metals by SW-846 Method 6020/7476, and
- TPH by EPA Method 8100M.

Groundwater sampling results are summarized in Tables 4 and 5. Laboratory data reports are provided in Appendix F.

2.3.3.1 Hudson In-Road & MBTA ROW

Three environmental soil boring locations (SB-5, SB-21 and SB-24) in Hudson were completed as groundwater monitoring wells as shown in Figure 2 – Sheets 2 and 4. On August 3, 2018, groundwater sampling from wells were collected, at which time groundwater was present at depths from 7.65 feet at SB/MW-24 to 15.32 feet in SB/MW-5. As shown in Table 4, no groundwater impacts were identified in any of the three samples. Groundwater analytical results were below the most stringent Reportable Concentrations, category GW-1 (RCGW-1) standards.

2.3.3.2 Sudbury ROW

Three soil boring locations (SB-33, SB-35, and SB-42) in Sudbury were completed as monitoring wells as shown in Figure 2 – Sheets 6 and 7. Groundwater sampling of these wells was completed by VHB on December 5, 2018. Depth to groundwater during the sampling ranged from 1.25 feet at SB/MW-35 to 3.31 at SB/MW-33. As shown in Table 5, the groundwater sampling identified no impacts within this portion of the Project area. Groundwater analytical results were below the most stringent RCGW-1 standards.

In conclusion, the 2018 soil and groundwater pre-characterization sampling program and geotechnical subsurface exploration, as discussed above, assessed the presence of OHM within the in-road and Industrial/Commercial segments of the MBTA ROW portions of the Project. The results from these activities were used to identify applicable BMPs for managing excavated soil and groundwater. Further details on the management of soil and groundwater encountered along the Project are described in the following sections.

3.0 SOIL MANAGEMENT

Excavated soil will be managed according to the requirements of Eversource's *Massachusetts Excess Soil and Groundwater Management Policy* (January 2020), the plans and specifications for the Project, DEP's RTG, and applicable local, state and federal regulations, policies and approvals, including the special conditions identified in Orders of Conditions issued by the Towns of Hudson, Sudbury and Stow. In general, geotechnically suitable excavated soil shall be reused to greatest extent feasible within the Project's limits of work to reduce surplus soil requiring off-site transportation and disposal. A summary of the estimated surplus and potential soil available for reuse is outlined in the table below.

Segment	Classification	Town	Excavation (cy)	Soil Reuse (cy)	Excess Soil (cy)
1	Residential/Rural	Hudson	7,980	410	7,570
	Industrial	Hudson	1,350	--	1,350
	Residential/Rural	Hudson	2,330	190	2,140
2	Industrial	Hudson	8,060	1,550	6,510
3	Residential/Rural	Hudson	4,380	2,580	1,800
	Industrial	S/H	260	260	--
4	Residential/Rural	Sudbury	15,010	8,170	6,840
	Industrial	Sudbury	10,040	6,640	3,400
	In-Road	Industrial	Sudbury	8,470	--
SS	Industrial	Sudbury	330	--	330
TOTAL			58,210	19,800	38,410

"In-Road" = In-road portion of the Project, from HLPD to MBTA ROW

"SS" = Sudbury Substation

"—" = Indicates no or minimal amounts anticipated | "cy" = cubic yards

Refer to Section 2.1.6 for MBTA ROW RTG Segment delineation and Project stationing.

The requirements for on- and off-site soil management re outlined in this Section.

3.1 On-Site Soil Reuse

The on-site reuse of excavated soil will be performed according to where the soil is excavated within the overall Project area. For work in the in-road areas, soil will be reused in the general locations it was excavated. Reuse within the MBTA ROW portion will be performed according to MassDEP's RTG and the segment classification discussed in Section 2.2.1. Additionally, Eversource has adopted the conservative approach that soil reuse from Rural/Residential and Industrial/Commercial segments will be kept separate since soil from Rural/Residential segments has not been characterized and intermixing of soil between different segments classifications is not allowed pursuant to Town approvals. Town approval also prohibit the reuse of excavated soil from the ROW across municipal boundaries to the greatest extent practicable.

As noted above, it is estimated that there will be up to approximately 19,800 cubic yards of excavated soil available for on-site reuse during the Project. Based on the soil pre-characterization sampling results, this SGMP has established appropriate BMPs to minimize or eliminate exposure to contaminated soil by construction workers, site visitors, and the adjacent community as well as to mitigate the track out/migration of contaminated materials, where present, outside the Project's limits of work. The RTG BMPs will include:

- Preparation of site-specific health and safety plan covering the potential hazardous associated with working with contaminated soil likely to be encountered during the Project.
- Implementing dust control measures, such as wet misting, during excavation and grading operations to prevent fugitive dust emissions.
- Covering loads of soil during transport within the Project Area and during transport between off-site laydown areas.
- Securing active work areas and temporary soil stockpile areas to prevent exposure to potentially contaminated soils.
- Providing appropriate erosion and sedimentation controls and stabilization of exposed areas to prevent/control stormwater runoff.
- Limit temporary stockpiles within active work areas and provide temporary soil stockpile locations that are adequately protected/safe-guarded. Stockpiles to be placed on and covered with polyethylene sheeting and provided with erosion and sedimentation controls.

Additionally, an independent environmental monitor will conduct inspections of Project work areas and off-site laydown and stockpile areas to assess BMP effectiveness and identify additional controls, where needed.

3.2 Off-Site Soil Management

3.2.1 Eversource Soil Types

It is estimated that the Project may result in generating up to approximately 38,400 cubic yards of surplus excavated soil. Surplus soil unable to be reused within the Project area will be transported off-site for appropriate reuse, recycling, treatment or disposal. The transport and off-site management of surplus soil will be performed according to applicable local, state and federal regulations and polices and Eversource's *Massachusetts Excess Soil Management Policy* and MassDEP's COMM-97 policy and Similar Soils Provisions Guidance (WSC-13-500). To evaluate management options, soil within the Project Area will be classified according to the following Eversource soil management categories:

Type A Soil: Reuse at Sand and Gravel facility: Soils which do not contain oil or hazardous material (OHM) or contain OHM below levels consistent with "natural" soil per MassDEP's Similar Soils Provision Guidance (WSC-13-500) are not considered Remediation Waste; this includes soil that exhibits concentrations of TPH less than or equal to 25 parts per million (ppm). These "natural" soils may be reused at specific beneficial reuse locations on a case-by-case basis under the discretion of Eversource and may be reused at an active sand and gravel processing facility that holds a Site Assignment Authorization with approval from the LSP-of-Record. Facilities that are reclaiming former sand and gravel pits must have a MassDEP approved ACO in place in accordance with MassDEP Interim Policy COMM-15-01: Re-Use of Soil for Large Reclamation Projects Policy.

Type B-1 Soil: <RCS-1 Beneficial Reuse: Soil containing OHM concentrations below MCP RCS-1 criteria can be used as fill material at off-site industrial/commercial locations provided that pre-existing OHM concentrations at the fill location are equal to or higher than those that exist in the construction generated soil and are not located within the Utility Related Abatement Measure (URAM). Facilities must have a MassDEP approved Administrative Consent Order (ACO) in place in accordance with MassDEP Interim Policy COMM-15-01.

Type B-2 Soil: <RCS-2 Beneficial Reuse: Soil containing OHM concentrations below MCP RCS-2 criteria can be used as fill material at off-site industrial/commercial locations provided that pre-existing OHM concentrations at the fill location are equal to or higher than those that exist in the construction generated soil and are not located within the URAM. Facilities must have a MassDEP approved ACO in place in accordance with MassDEP Interim Policy COMM-15-01.

Type C-1 Soil: Massachusetts Unlined Landfills: Soil that contains OHM concentrations above MCP RCS-1 levels but below the criteria for Massachusetts Unlined landfills per MassDEP Policy COMM-97-001.

Type C-2 Soil: Massachusetts Lined Landfills: Soil that contains OHM concentrations above MCP RCS-1 levels and Massachusetts Unlined landfills but below the criteria for Massachusetts Lined landfills per MassDEP Policy COMM-97-001.

Type D-1 Soil: Asphalt Batch Facility: Soil that contains OHM concentrations above MCP RCS-1 levels and above the criteria for Massachusetts unlined and lined landfills per MassDEP Policy COMM-97-001 but meets acceptance criteria for a permitted asphalt batch facility can be recycled at such facilities.

Type D-2 Soil: Thermal Desorption Facility: Soil that contains OHM concentrations above MCP RCS-1 levels and above the criteria for Massachusetts unlined and lined landfills per MassDEP Policy COMM-97-001 but meets acceptance criteria for a permitted thermal desorption facility can be recycled at such facilities.

Type D-3 Soil: Non-Hazardous Waste Out of State RCRA Subtitle D Landfill Facility Daily Cover: Soil that contains OHM concentrations above MCP RCS-1 levels and above the criteria for Massachusetts unlined and lined landfills per MassDEP Policy COMM-97-001 but meets acceptance criteria for a permitted non-hazardous waste out of state Subtitle D landfill facility for use as daily cover.

Type D-4 Soil: Non-Hazardous Waste Out of State RCRA Subtitle D Landfill Facility Disposal: Soil that contains OHM concentrations above MCP RCS-1 levels and above the criteria for Massachusetts unlined and lined landfills per MassDEP Policy COMM-97-001 but meets acceptance criteria for a permitted non-hazardous waste out of state Subtitle D landfill facility can be disposed at such facilities.

Type E-1 Soil: U.S. EPA Hazardous Waste RCRA Subtitle B Treatment Facility or RCRA Subtitle C Landfill Facility: Soil containing OHM concentrations that exceed reuse levels for Massachusetts landfills, asphalt batch and/or thermal desorption facilities and exceed federal TCLP limits or otherwise meets the definition of hazardous waste. Meets acceptance criteria for a permitted hazardous waste out of state RCRA Subtitle B treatment facility of RCRA Subtitle C landfill facility.

Type E-2 Soil: U.S. EPA Hazardous Waste PCB TSCA Landfill: Soils that either contain PCB concentrations greater than 50 PPM or are TSCA regulated and being managed under a Performance Based Cleanup can be disposed at approved TSCA facilities in accordance with 40 CFR 761.

Type E-3 Soil: Soil Stabilization to treat TCLP metals: Soil stabilization treatment of soil containing OHM concentrations that exceed federal TCLP limits for metals, to render soils non-hazardous prior to generation.

As noted above, it is estimated that the Project will require managing up to 38,410 cubic yards (approximately 65,200 tons) of surplus soil. The pre-characterization sampling program results described in Section 2.0 indicate management of these materials will generally be as either Type A, Type B-1 or Type C-1. The soil meeting these classifications along the Project area are color-coded as shown in Figure 2 and summarized below.

Pre-Characterization Soil Management Summary					
Town	Figure 2 Sheet No.	Soil Type Grouping Locations	Project Stationing		Soil Category
			Begin	End	
Hudson	1	Project Start to MP-1	00+00	--	B-1
		MP-1 to MP-3	--	--	C-1
		MP-3 to SB-1	--	--	B-1
		SB-1 to MP-6	--	--	C-1
		MP-6 to SB-2	--	--	B-1
		SB-2 to MP-10	--	--	A
		MP-10 to MP-14	--	--	B-1
	2	MP-14 to MP-15	100+00	129+00	B-1
		MP-15 to SB/MW-5	129+00	131+50	A
		SB/MW-5 to SB-14	131+50	152+05	B-1
		SB-14 to SB-15	152+05	156+52	A
		SB-15 to SB-44	156+52	161+87	B-1
	2 - 3	SB-44 to SB-45	161+87	180+40	A
	3	SB-45 to MP-22	180+40	186+50	C-1
		MP-22 to SB-16	186+50	211+43	A
		SB-16 to SB-43	211+43	303+85	B-1
2 - 3	SB-43 to SB/MW-24	303+85	360+93	A	
Sudbury	3 - 6	SB/MW-24 to MP-27	360+93	572+00	B-1
	6	MP-27 SB/MW-33	572+00	576+76	A
	6 - 7	SB/MW-33 to MP-28	576+76	579+96	B-1
	6 - 7	MP-28 to MP-29	576+96	587+00	C-1
	7	MP-29 to SB-34	587+00	591+83	A
		SB-34 to MP-32	591+83	603/700+00	B-1
		MP-32 to SB-40	603/700+00	714+90	C-1
	7 - 8	SB-40 to Project End	714+90	767+20.85	B-1

According to Eversource's guidelines for excess soil management and the Project's excess soil management specifications, the following table outlines the anticipated types of facilities to be utilized and the required sampling frequencies to facilitate acceptance for surplus soil generated from the Project.

Soil Type	Expected Surplus Tonnage (% of total)	Destination Facility	Typical Sampling Frequency (per ton)
Type A	15	Reuse at Sand & Gravel Facility	800
Type B-1	76	<RCS-1 or 2 ACO Soil Reclamation Site	800
Type C-1	9	Unlined In-State Landfill	800

The Project contractor will be responsible for selecting appropriate destination facilities based on the pre-characterization soil sampling results and any supplemental testing performed by contractor during the Project. According to the Project's specifications, it is the contractor's responsibility to perform additional sampling, where required, to obtain approval from off-site facilities. The Contractor shall transport surplus soil off-site under a Massachusetts Material Shipping Record (MSR), Bill of Lading (BOL) or uniform hazardous waste manifest. Draft shipping documentation shall be prepared by the Contractor and submitted to Eversource and LSP for review a minimum 14 days prior to soil shipment. Eversource will sign all documentation as generator. Where required, Weston & Sampson will sign/stamp MSRs and BOLs as the LSP-of-Record/Qualified Environmental Professional. Final shipping documentation, once approved by the facility will be provided to the Sudbury Conservation Commission.

3.3 Soil Handling Procedures

Soil management will be overseen by Eversource and Weston & Sampson as the Licensed Site Professional (LSP) of Record for the Project. As noted above, inspections by a Project EM will be made during the Project to monitor the Contractor's soil handling operations and BMPs. Weston & Sampson will also conduct regular (weekly) inspections to verify that soil handling conforms with the Project's plans and specifications and this SGMP. General soil excavation and handling requirements are described below. Additional handling procedures are also outlined in Eversource's Excess Soil Management Specification 22153 included with the contract documents.

3.3.1 Excavation

Excavation of soil shall be handled in a manner that minimizes the spread and loss of contaminated materials, prevents cross-contamination of soil types/classifications, and segregates construction debris from excavated contaminated materials. Excavation activities should implement measures to divert and/or prevent surface water from directly entering open excavation areas. Following excavation, excess soil must be transported directly to the approved temporary controlled stockpile area for stockpiling prior to on-site reuse or transported directly off-site for reuse/recycling/disposal. No soils shall be removed from the Project area without prior approval from Eversource.

Excavated soils shall be handled according to their pre-characterization Eversource soil category and their RTG segment designation. Soils may be reclassified by the LSP and/or Eversource during excavation based on field screening, visual and olfactory observations, and the results of additional laboratory testing performed by the Contractor or LSP. Additionally, the LSP may evaluate excavation areas for the presence of debris to assess if such material can be designated as uncontaminated general demolition material. Excavation areas will also be inspected if unforeseen contaminated materials are encountered. The management of debris and unknown contaminated materials will be according to the Project specifications and Sections 5.0 and 6.0 of this SGMP.

3.3.2 *Dust Controls*

Soil excavation shall be performed in a manner that limits generating fugitive dust. Dust control measures and airborne particulate matter monitoring will be implemented to prevent unacceptable levels of dust resulting from handling operations associated with contaminated materials. Dust controls utilized by the contractor shall include wet misting during excavation activities or soil stockpiling activities, covering inactive soil stockpiles with polyethylene tarps, and covering each load of materials transported within and outside the Project area. Additionally, the Contractor is responsible for sweeping/cleanup of any materials tracked onto local streets. Lastly, any water used for dust suppression cannot be pumped or obtained from resource areas. The dust suppression methods shall be subject to approval from LSP. If alternate dust suppression methods are proposed by the contractor, the Sudbury Conservation Commission will be notified prior to implementation.

3.3.3 *Stockpiling & Temporary Storage*

Following excavation, excess soil must be transported directly to the approved temporary controlled stockpile area for stockpiling prior to on-site reuse or transported directly off-site for reuse/recycling/disposal. The Contractor may be permitted to temporarily stockpile excavated materials upon approval by Eversource and the LSP. Soil stockpiles within the Project area will be limited in size and duration (no longer than one week) with appropriate runoff and erosion controls (silt fence and/or straw bales) installed around its perimeter. Sediment controls must be inspected regularly and repaired or replaced, as needed. Stockpiles of contaminated soils must be placed on and covered with a minimum of 6 mil polyethylene sheeting and at the end of each day secure the covering to prevent the stockpile from becoming uncovered due to winds. Excavated contaminated materials shall not be placed directly on the ground.

3.3.4 *Transportation & Disposal*

The Contractor is responsible for facilitating acceptance and transporting surplus excavated materials off-site for appropriate reuse, recycling or disposal. As noted above, no soil shall be removed from the Project area without prior approval from Eversource. The transport of soil classified as Type B-1 and Type C-1 will also require a signed/stamped Massachusetts BOL, MSR, and/or opinion letter from the LSP. During transportation, the Contractor is responsible for employing all measures necessary to prevent debris and/or soil from being spilled from trucks or tracked out onto local streets. Transportation shall also be performed according to any municipal traffic management plans required.

Following receipt of the surplus soil by off-site receiving facilities, the Contractor shall provide copies of fully executed manifests, MSRs and/or BOLs to Eversource and the LSP along with copies of certified weight slips for each load received. Information shall be provided to Eversource and LSP within 20 days of the last shipment.

4.0 GROUNDWATER MANAGEMENT

Observations during the Project's pre-characterization sampling program indicate depth to groundwater within the Project area generally ranges between 1 to 4 ft bgs in Sudbury and 7.5 to 15 ft bgs in Hudson. Based on these depths and the anticipated excavation depths for the Project, groundwater dewatering is likely to be required during construction. Given that previous groundwater sampling did not identify any locations where contaminant concentrations exceeded applicable standards, it is anticipated that only uncontaminated groundwater management will be necessary.

4.1 Groundwater Management Procedures

As described in Section 2.2.1, in 2018 LGCI performed geotechnical subsurface explorations across the Project in 2018. Based on soil observations and the perceived depth to groundwater encountered during their investigation, LGCI estimated groundwater infiltrations between 1,000 to 4,000 gallons per day for proposed vault excavations and 10 to 40 gallons per day per foot of transmission line trench could be expected.

The LCGI investigations indicate groundwater dewatering will be required to complete construction. Where dewatering is necessary, it shall be managed in accordance with the Project specifications, Section 22151 – Construction Dewatering, and all applicable local, state and federal regulations, polices and approvals, including the special conditions stipulated by OOCs issued by the Towns of Hudson, Sudbury and Stow. The Contractor shall note handling groundwater dewatering may vary by locations based on location of work and nearby resource areas. In general, groundwater shall be discharged in the vicinity of where it was generated and not within any wetland or 100-feet of a RFA. Additional dewatering handling requirements are discussed in Section 5.0.

4.1.1 General Requirements

Given the extent of dewatering that is likely to be necessary during the Project, efficient handling and discharge of dewatering effluent will be critical to completing construction and comply with the OCC issued from the local conservation commissions having jurisdiction over the work. Options for handling groundwater include the following based on work area conditions, infiltrations rates, and locations of any nearby natural resource areas:

- Infiltration by overland flow of the groundwater discharge to a vegetated upland area within the limit of work.
- Filtration of dewatering effluent using a filter bag surrounded by straw wattles or similar method before entering a dedicate catch basin or drain.
- On-site recharge through an adjacent section of trench within the limit of work.

Irrespective of the Contractor's chosen method, the Contractor is required to implement methods of controlling groundwater, seepage, precipitation, surface water runoff, and construction-generated water both inside and outside the excavation. The Contractor is responsible to furnish, install, operate, maintain, and remove a temporary construction dewatering systems/equipment to handle the expected flows. According to the Project specifications, the Contractor's dewatering system shall be capable of handling varying flow rates up to 50,000 gallons per day for every 100 linear feet of trench and manhole based on conditions encountered during construction. It is also the Contractor's responsibility to sufficiently dewater excavated soil to prevent transporting soil containing free liquids from the Project.

4.1.2 System Operation

The Contractor shall operate dewatering systems as necessary to lower and maintain groundwater water table and hydrostatic pressures below subgrade of trench and manholes to allow construction to proceed in a reasonably dry condition and maintain safe working conditions. Groundwater seepage, precipitation, surface water runoff and other construction-generated water shall be controlled until excavation and backfilling activities are complete. It is also the Contractor's responsibility to provide adequate collection, pumping, storage, sedimentation controls and, if necessary, treatment to comply with all local, state and federal regulations affecting the work. Eversource, the Sudbury Conservation Commission, and LSP shall be notified a minimum 7 days prior to dewatering discharge. Additional requirements outlined by the OOCs for the Project are summarized in Section 5.2.

4.1.3 On-site Recharge Requirements

The Contractor may discharge/recharge construction-related water on-site provide that the on-site discharge/recharge does not result in on-site surface runoff or damage to on-site construction and on-site discharge does not spread contamination or increase existing levels of contamination in other portions of the site or adjacent sites. On-site discharge must be performed according to the requirements of the MCP, Town/Conservation Commission requirements, and all other local, state and federal regulations. The Contractor is responsible for providing equipment and incidentals necessary for adequate flow and sedimentation control for on-site discharge of construction-related water. Additional groundwater management requirements are outlined in the Project Specifications.

5.0 REGULATORY REQUIREMENTS

The excavation and handling of soil and groundwater in some areas of the Project will be subject regulation under the MCP for handling contaminated materials as well as the special conditions stipulated by the Orders of Conditions issued by Town of Hudson, Sudbury and Stow for work in natural resource areas along the Project route. These requirements are discussed below.

5.1 Utility-Related Abatement Measure

The pre-characterization sampling program identified two locations within the Hudson in-road portion of the Project where contaminant concentrations exceeded their applicable MCP RCS-1 standards. Based on the exceedances, soil and groundwater management activities during work in these areas will be conducted under a Utility-Related Abatement Measure (URAM) prepared according to the MCP, 310 CMR 40.0460. The URAM will be filed by Eversource and Weston & Sampson prior to construction in these areas. The limits of the URAM areas based on the pre-characterization data performed to date are shown on Figure 2, Sheets 1 and 3.

5.2 Order of Conditions

The Orders of Conditions issued by the Towns of Hudson, Sudbury and Stow will affect portions of the earthwork conducted during the Project. In addition to complying with the requirements of this SGMP, work must be performed according to the OOC from each town. The OOC include various special conditions with the potential to impact environmental protection, earthwork and dewatering activities are outlined below. Where applicable, wetland jurisdictional areas are shown in Figure 3.

Order of Conditions – Special Conditions	
HUDSON	<p><u>EARTHWORK CONDITIONS</u></p> <ul style="list-style-type: none"> All Time-Of-Year (TOY) construction restrictions and sweeps required by the Natural Heritage and Endangered Species Program shall be followed. TOY restrictions include no work within 450 feet of vernal pools between March 1 and June 1. The Project EM shall be always on site that work is being performed in jurisdictional wetland areas. If on-site excavation or other work reveals any soil contamination in reportable concentrations or quantities, the Conservation Commission shall be notified and shall be copied on all related correspondence. If it is necessary to clean construction equipment while on site, it must be cleaned outside of the 100-foot Buffer Zone, Riverfront Area, or any other Resource Areas. <p><u>DEWATERING CONDITIONS</u></p> <ul style="list-style-type: none"> If dewatering is necessary, water will not be discharge directly into any waterbodies, BVW, or inner 100-feet of RFA. Conservations Commission shall be notified in advance if dewatering required within jurisdictional areas and shall inspect work site before dewatering commences if such inspection can occur within 24 hours of notification.

	<ul style="list-style-type: none"> If any remedial activities or changes to the work plans are required due to the potential presence of PFAS in the Zone II wellhead area or other jurisdictional areas; the Conservation Commission shall be notified.
<p style="text-align: center;">SUDBURY</p>	<p><u>EARTHWORK CONDITIONS</u></p> <ul style="list-style-type: none"> All stumping, grubbing, and grading shall be conducted after erosion controls have been installed and shall not adversely affect woody vegetation, or disturb soils, outside the permitted erosion control barriers. Laydown areas shall be located predominantly outside resource areas subject to the Commission's jurisdiction. If any construction laydown area is proposed outside of the currently proposed work limits and in an area subject to the Commission's jurisdiction, an erosion control plan shall be submitted in advance to the Commission's representative for review and approval. In any part of the Project work limits within 200 feet of a road crossing where the MBTA ROW crosses a Zone II for the Sudbury Water District supply wells, if a clay layer is encountered in the excavation for the transmission line and the excavation will extend below the bottom of the clay layer, the clay shall be stockpiled and reused to backfill and line the excavation before the transmission line duct bank is placed in that location. Stockpiling of materials within the ROW shall be limited in size and duration (one-week maximum) and shall be located as far from sensitive areas as possible. Soil stockpiles shall be covered with tarp or plastic sheet and surrounded by erosion controls. Excess soil not reused within the Project site shall be stockpiled outside the ROW and wetland jurisdiction. Weekly reports prepared by the Project EM throughout construction will identify the locations of active stockpiles and will confirm that the appropriate erosion control measures are being implemented. At least two weeks prior to the start of Phase I, the Applicant shall provide a construction schedule detailing construction activities and sequencing. This shall be amended as necessary throughout construction. Weekly reports shall be submitted to the Commission that details work completed each week and anticipated work for the coming week, including identifying when work is located in areas of potential elevated levels of soil and groundwater contamination. These reports shall include anticipated dewatering activities so that oversight can be provided by the Commission or its Agent, if found necessary, and include the location of active stockpiles with confirmation that appropriate erosion control measures are being implemented. No equipment cleaning or refueling may occur within a wetland or upland resource area, with the exception of the crane. For cranes positioned within wetland jurisdiction for more than one day, the Applicant shall provide secondary containment to contain any leaks that may emanate from equipment. Other than the grading of minor amounts of soil within the immediate vicinity of the Hudson/Sudbury town boundary, no soil excavated from Hudson may be used in Sudbury. The Sudbury Conservation Commission shall be copied if the Hudson Conservation Commission is notified of any remedial activities or changes to the work plans required due to the potential presence of PFAS in jurisdictional areas in Hudson. The Applicant shall ensure that any reuse of on-site soils shall not result in the degradation of soil or groundwater in the area.

	<ul style="list-style-type: none"> Loam borrow brought to the site to stabilize the work area after completing Phase I shall be sourced appropriately. Use of impacted soils (from contamination or invasive seed) shall be prohibited. <p><u>DEWATERING CONDITIONS</u></p> <ul style="list-style-type: none"> If dewatering is required, the Project EM shall be notified of all dewatering activities and be on-site during dewatering in sensitive locations, i.e., whenever excavation is proposed within 50 feet of a wetland, or when extensive dewatering will be needed. All dewatering shall include appropriate physical measures to filter sediment from water pumped from excavations, slow down velocity of discharge to eliminate potential for erosion and promote infiltration back to the local groundwater table. Dewatering activities shall be located as far as possible from wetland resource areas and shall be prohibited from discharging to Bordering Vegetated Wetlands, Isolated Vegetated Wetlands, Land Under Water Bodies and Waterways, or within the inner Riverfront Area. Dewatering may only occur in other upland resource areas provided adequate control measures are implemented and locations are identified by the contractor and review and approved by the Commission and/or its agent prior to implementation.
<p style="text-align: center;">STOW</p>	<p><u>EARTHWORK CONDITIONS</u></p> <ul style="list-style-type: none"> No filling or excavating of land beyond the limits or above the grades on the submitted plans is authorized. All stockpiles shall be within the limit of work. The erosion controls shall serve as a limit of work and no activity, including stockpiling or storage of material, is permitted beyond the sediment controls. If dust controls beyond water spraying is required, the Conservation Commission shall be notified. All trenches shall be backfilled or secured at the completion of each workday. All imported soils shall be clean and reasonably free of invasive species. No soil contaminated with Japanese knotweed and/or knotweed rhizomes may be reused in Stow. The Environmental Monitor shall identify and document any areas contaminated with Japanese knotweed within 500 of the eastern and western Town of Stow line prior to commencing construction. <p><u>DEWATERING CONDITIONS</u></p> <ul style="list-style-type: none"> If dewatering is necessary, the Conservation Commission shall be notified in advance and must approve this work in the field prior to commencing dewatering. No direct discharge to a waterbody is permitted. No overland discharge of water is allowed within 100 feet of vegetated wetlands.

	<ul style="list-style-type: none">• Concrete wash-out water shall not be discarded within the 100' buffer or within 100' of any drainage system that may discharge to wetlands or outside of the limit of work.
--	---

Restricted areas for dewatering are shown in Figure 3. Additional conditions affecting the other portions of the work are included with the OOCs in Appendix A.

6.0 MANAGEMENT OF OTHER EXCAVATED MATERIALS

Based on historic review of the Project Area, site reconnaissance, and the completed subsurface investigations, Project work may require excavating and handling of additional materials, such as the former rail line and railroad ties within the MBTA ROW portion of the Project. Types of materials to may be encountered and corresponding management requirements are outlined below.

6.1 Construction & Demolition Debris

Construction and demolition debris, such as plastic, metal, wood debris and glass, may be encountered during some soil excavation work. If encountered, these materials shall be segregated to maximum extent feasible for separate off-site transportation and recycling at an appropriate facility permitted to receive such materials.

6.2 Railroad Ties and Ballast

Work within the MBTA ROW portion of the Project is anticipated to encounter rail lines and ties associated with the former train service in this area. These materials shall be segregated during soil excavation for separate handling and disposal. Excavated rail ties shall be transported off-site for appropriate recycling or disposal according to MassDEP solid waste regulations, 310 CMR 16.00 and 310 CMR 19.00 and all other applicable local, state and federal regulations.

If ballast is encountered, it should be visually evaluated for the presence of OHM such as staining or sheening. If ballast is visually impacted, this material should be segregated for off-Site disposal consistent with section 22153 of the Project specification. If unimpacted, the contractor should re-use ballast whenever practicable or export with excess soil, as required.

6.3 Asphalt, Brick & Concrete

Asphalt, brick and concrete (ABC) that is encountered during the Project shall be segregated from excavated soil to maximum extent feasible for separate handling/disposal. ABC materials shall be managed/recycled according to MassDEP's solid waste regulations, 310 CMR 16.00 and 310 CMR 19.00. The crushing/downsizing of ABC materials to facilitate their loading, transport and acceptance by off-site recycling facilities is the Contractor's responsibility.

7.0 MANAGEMENT OF UNEXPECTED SOIL OR GROUNDWATER CONDITIONS

The Contractor shall immediately notify Eversource, the Sudbury Conservation Commission, and the LSP if suspected contaminated materials are encountered during the Project. Suspected contaminated material characteristics include: significant petroleum and/or chemical odors, an oily sheen or the presence of non-aqueous phase liquid (NAPL), and/or materials that exhibit significant staining or are comingled with suspect building debris (i.e., floor tile, insulation, etc.) or asbestos containing cement pipe.

Before continuing to handle any suspect contaminated materials, the Contractor will be provided guidance on how to manage, characterize, temporarily store, and recycle/dispose of any such materials. At a minimum, the Contractor will segregate suspect contaminated materials from other materials, as required by Eversource and the LSP. Stockpiles of contaminated materials will be placed and covered by 6-mil polyethylene sheeting, while groundwater/NAPL will be containerized in drums or frac tank. Additionally, best management practices (BMPs) for erosion and sedimentation control of soil stockpiles (e.g., straw wattles, silt socks, etc.) will also be employed to prevent silt-laden runoff. These BMPs and stockpile covers shall be maintained until the materials are removed from the Site.

In the event suspect contaminated materials are encountered, it may be necessary for the Contractor to stop work and assist Eversource/LSP with collecting samples to evaluate the nature of potential soil and groundwater impacts and to characterize materials for appropriate off-site transportation and disposal. Work in suspected contaminated areas shall not resume until receipt of the sampling data unless approved by Eversource and the LSP. Based on the data, the Contractor shall transport suspected contaminated materials off-site for appropriate disposal. No materials shall be transported from the area without approval by Eversource and LSP as well as the Contractor's receipt of a signed/stamped BOL, MSR or hazardous waste manifest, as appropriate.

8.0 ORGANIZATION & RESPONSIBILITIES

Managing soil and groundwater will involve coordination between Eversource, Weston & Sampson as LSP-of-Record, and the Construction Contractor. This Section outlines the roles and responsibilities as well as lines of communication between these parties. Contact information for Eversource and Weston & Sampson are provided below.

Eversource Project Contact:

Mr. Dean Bebis
Environmental Specialist – Soil & Groundwater Management
Eversource Energy
247 Station Drive, SE270
Westwood, Massachusetts 02090
508-654-0492 | Dean.bebis@eversource.com

Weston & Sampson Project Contact:

Mr. Paul McKinlay, PG, LSP
Senior Project Manger
51 Walkers Brook Drive, Suite 100
Reading, Massachusetts 01867
617-5714521 | Mckinlayp@wseinc.com

8.1 Construction Contractor

The selected contractor will be responsible for managing surplus soil and groundwater as outlined in Section 22153 – Excess Soil Management and Section 22151 – Construction Dewatering of the Project's specifications. Work will include:

- Provide an off-site laydown area, as needed, for the temporary storage of excavated soil and groundwater prior to reuse within the Project Area or off-site reuse, recycling, treatment or disposal. Storage area locations and materials are subject to approval by Eversource and LSP and shall coordinate with relevant sections of the Project plans and specifications. Note that the local OOCs included in Appendix A include specific provisions and restrictions for permitted stockpile locations and procedures.
- Submit for approval by Eversource /LSP all required submittals outlined by Section 22153 and Section 22151 (Appendix G), including a list of proposed soil reuse, recycling, and/or disposal facilities for each category of surplus soil identified. For each category, a primary and secondary facility shall be identified.
- Comply with all applicable permits and approvals for the work including OOCs included as Appendix A.
- Submit all required disposal paperwork to coordinate acceptance of surplus soil and groundwater by approved off-site facilities.
- Excavate, stockpile, load, transport and dispose/reuse of surplus soil and groundwater off-site at approved facilities.
- Excavate, segregate, stockpile, load, transport and dispose/reuse of miscellaneous excavated materials at approved facilities.
- Provide weekly soil management reports for review and approval by Eversource and the LSP. A copy of these weekly reports will be provided to the Sudbury Conservation Commission.

8.2 Eversource

Eversource shall be responsible for the following soil and groundwater management activities:

- Review and approve the Contractor's selected primary and secondary off-site reuse, recycling, treatment and disposal facilities.
- Review and approve the Contractor's temporary staging/laydown area location.
- Sign appropriate disposal documentation, including MSRs, BOLs, and waste profile forms, to facilitate acceptance and the transportation off-site of excavated materials, excess soil and groundwater to approved facilities. Licensed Site Professional.

8.3 Licensed Site Professional

The LSP shall be responsible for the following soil and groundwater management activities:

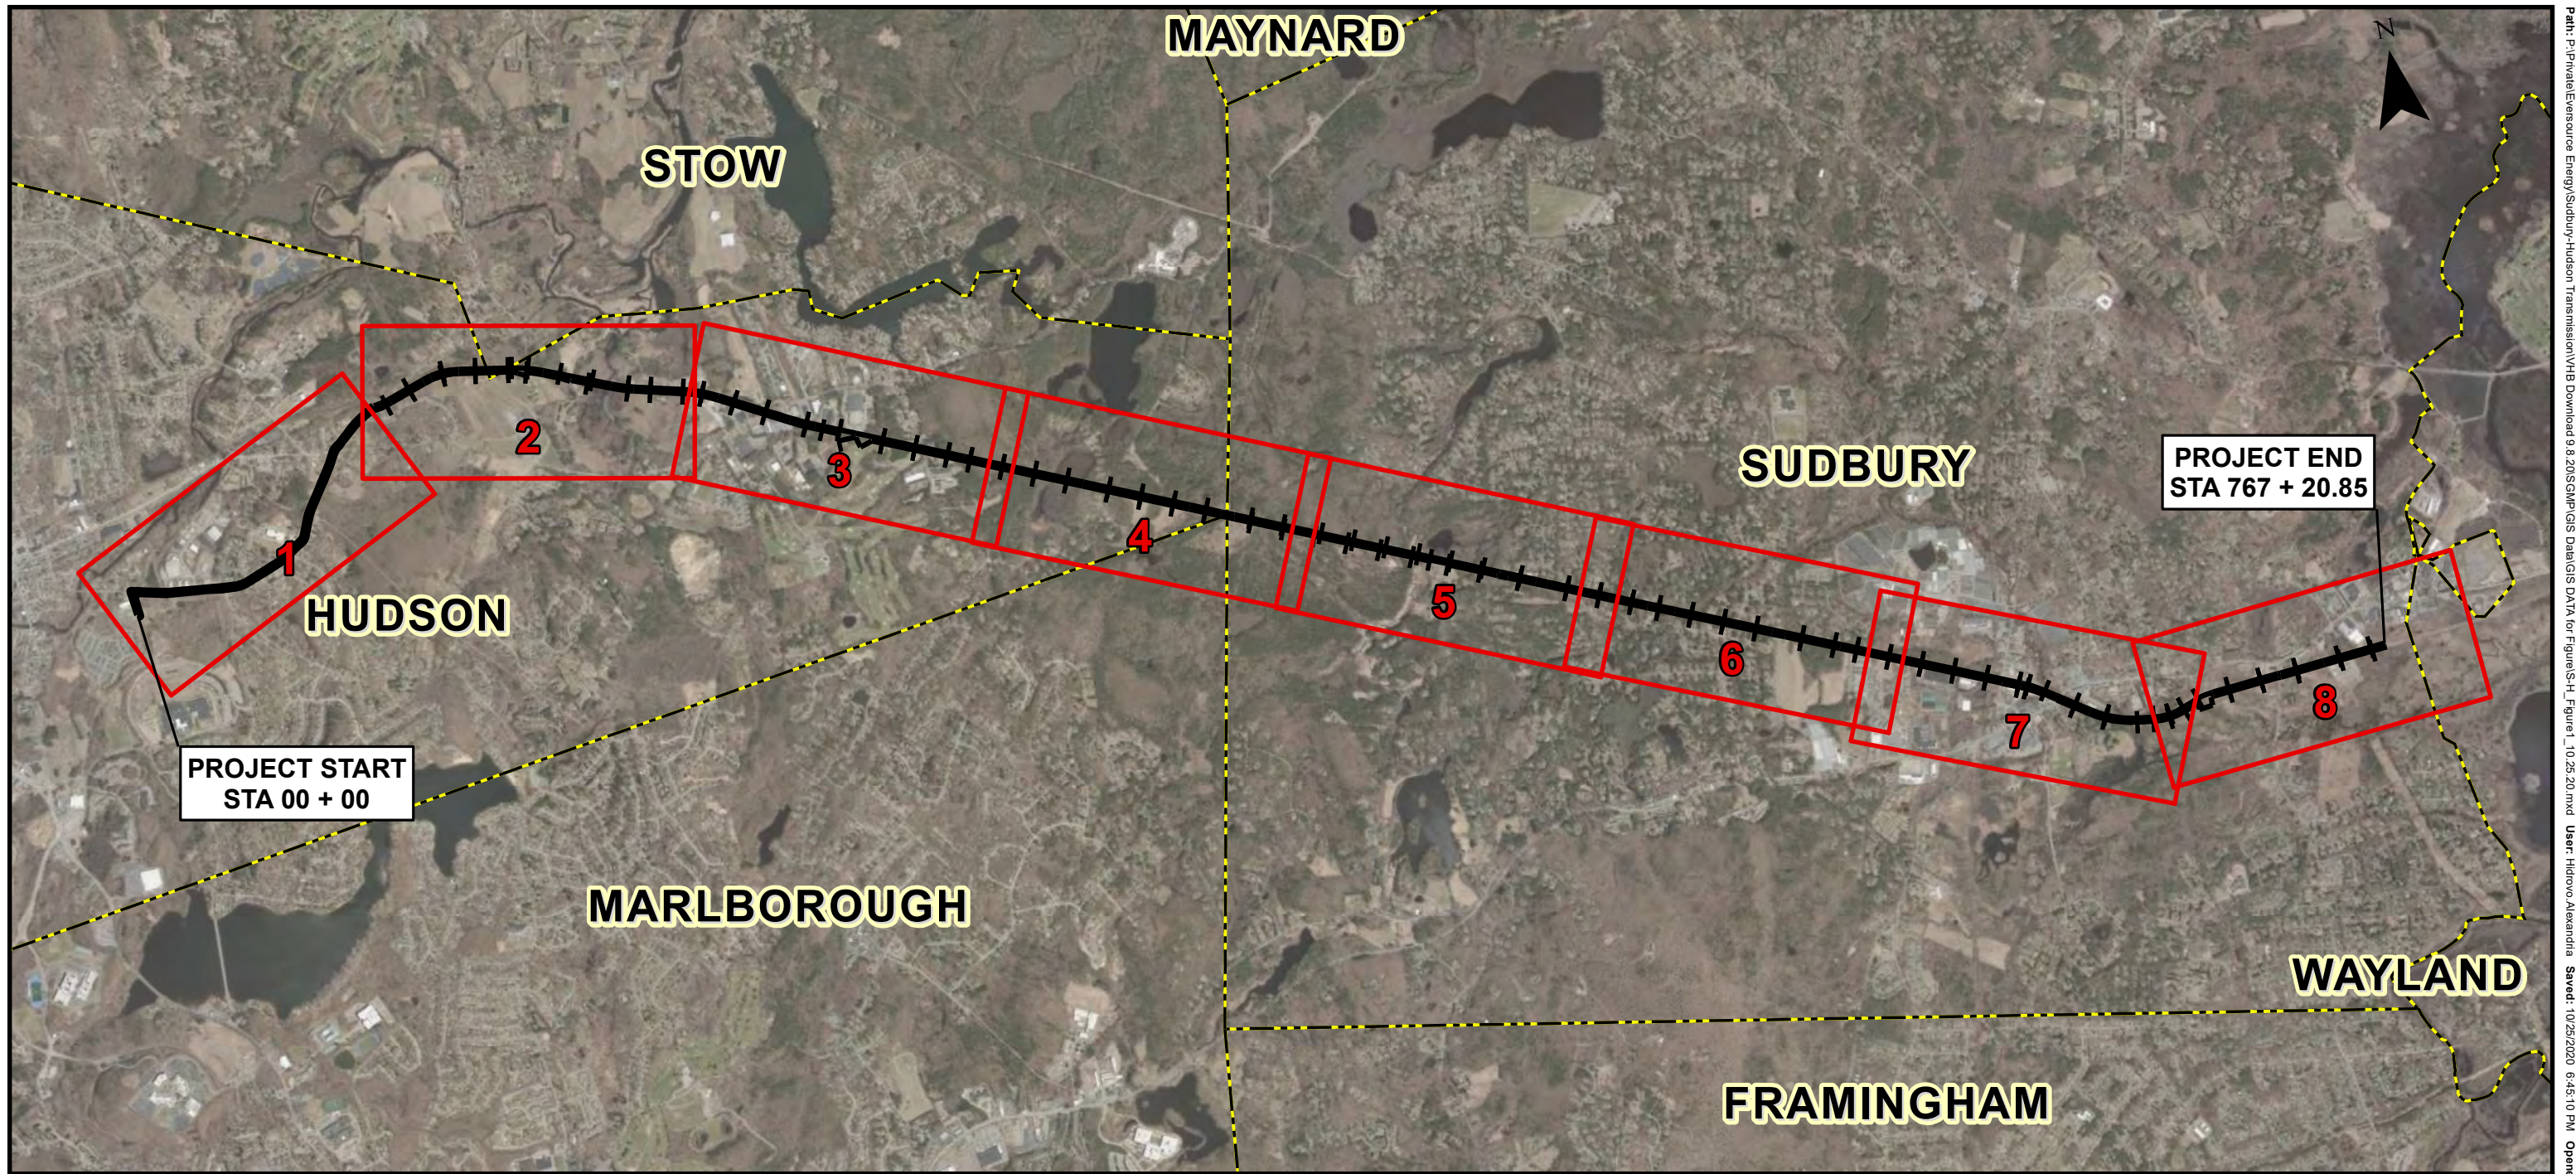

- Review the pre-characterization sampling results to develop appropriate soil classifications according to categories outlined in as well as relevant MassDEP policies (COMM-97-001, COMM-15-01) and approved off-site reuse, recycling, treatment or disposal facility acceptance requirements.
- Preparation and updating (as necessary) this SGMP.
- Responding to and establishing requirements for handling, segregating and stockpiling of unanticipated contamination discovered during the Project.
- Conduct supplemental soil and groundwater sampling and analysis as needed to support acceptance of surplus excavated soil and groundwater by approved off-site facilities.
- Review and approval of the Contractor's proposed transportation companies and off-site reuse, recycling, treatment and disposal facilities for surplus excavated materials, soil and groundwater.
- Review and approval of the Contractor's proposed staging locations.
- Preparing MSRs and BOLs along with all applicable waste profile questionnaires or control forms for the Contractor's use in obtaining acceptance for surplus excavated materials, soil and/or groundwater by approved off-site facilities.
- Preparing Utility-Related Abatement Measure (URAM) notifications along with associated status and completion reports where required to handling contaminated materials during the Project.
- Prepare any required Release Notification Forms (RNFs) to address unforeseen contaminated materials requiring notification to MassDEP under the MCP.

9.0 REFERENCES

Type A Soil: Reuse at Sand and Gravel facility: Soils which do not contain oil or hazardous material (OHM) or contain OHM below levels consistent with "natural" soil per MassDEP's Similar Soils Provision Guidance (WSC-13-500) are not considered Remediation Waste; this includes soil that exhibits concentrations of TPH less than or equal to 25 parts per million (ppm). These "natural" soils may be reused at specific beneficial reuse locations on a case by case basis under the discretion of Eversource and may be reused at an active sand and gravel processing facility that holds a Site Assignment Authorization with approval from the LSP-of-Record.

Type B-1 Soil: Less than RCS-1 Beneficial Reuse: Soil containing OHM concentrations below MCP RCS-1 criteria can be used as fill material at off-site industrial/commercial locations provided that pre-existing OHM concentrations at the fill location are equal to or higher than those that exist in the construction generated soil and are not located within the Utility Related Abatement Measure (URAM). Facilities must have a MassDEP approved Administrative Consent Order (ACO) in place in accordance with MassDEP Interim Policy COMM-15-01.

Type C-1 Soil: Massachusetts Unlined Landfills: Soil that contains OHM concentrations above MCP RCS-1 levels but below the criteria for Massachusetts Unlined landfills per MassDEP Policy COMM-97-001.

NOTES:
 Bolded, shaded, and underlined results meet or exceed regulatory threshold
 Bolded results are a laboratory detection limit that exceed a regulatory threshold
 RCS-x = MCP Reportable Concentrations for Soil Category x
 U = Not detected above the laboratory reporting limits shown to the left of the "U"
 NE = Standard not established
 mg/kg = Milligrams per kilogram, also known as parts per million

SOIL DISPOSAL CLASSIFICATION CATEGORIES
Type A Soil: Reuse at Sand and Gravel facility: Soils which do not contain oil or hazardous material (OHM) or contain OHM below levels consistent with "natural" soil per MassDEP's Similar Soils Provision Guidance (WSC-13-500) are not considered Remediation Waste; this includes soil that exhibits concentrations of TPH less than or equal to 25 parts per million (ppm). These "natural" soils may be reused at specific beneficial reuse locations on a case by case basis under the discretion of Eversource and may be reused at an active sand and gravel processing facility that holds a Site Assignment Authorization with approval from the LSP-of-Record. Facilities that are reclaiming former sand and gravel pits must have a MassDEP approved ACO in place in accordance with MassDEP Interim Policy COMM-15-01: Re-
Type B-1 Soil: <RCS-1 Beneficial Reuse: Soil containing OHM concentrations below MCP RCS-1 criteria can be used as fill material at off-site industrial/commercial locations provided that pre-existing OHM concentrations at the fill location are equal to or higher than those that exist in the construction generated soil and are not located within the Utility Related Abatement Measure (URAM). Facilities must have a MassDEP approved Administrative Consent Order (ACO) in place in accordance with MassDEP Interim Policy COMM-15-01.
Type C-1 Soil: Massachusetts Unlined Landfills: Soil that contains OHM concentrations above MCP RCS-1 levels but below the criteria for Massachusetts Unlined landfills per MassDEP Policy COMM-97-001.

 f. Latitude 42.39629N g. Longitude 71.52249W
6. Property recorded at the Registry of Deed for:
 a. County SOUTHERN MIDDLESEX b. Certificate c. Book 13156 d. Page 34
7. Dates
 a. Date NOI Filed : 1/2/2020 b. Date Public Hearing Closed: 8/6/2020 c. Date Of Issuance: 8/24/2020
8. Final Approved Plans and Other Documents
 a. Plan Title: SEE ATTACHED b. Plan Prepared by: c. Plan Signed/Stamped by: d. Revised Final Date: e. Scale:

B. Findings

1. Findings pursuant to the Massachusetts Wetlands Protection Act
 Following the review of the the above-referenced Notice of Intent and based on the information provided in this application and presented at the public hearing, this Commission finds that the areas in which work is proposed is significant to the following interests of the Wetlands Protection Act.

Check all that apply:

a. <input checked="" type="checkbox"/> Public Water Supply	b. <input checked="" type="checkbox"/> Land Containing Shellfish	c. <input checked="" type="checkbox"/> Prevention of Pollution
d. <input checked="" type="checkbox"/> Private Water Supply	e. <input checked="" type="checkbox"/> Fisheries	f. <input checked="" type="checkbox"/> Protection of Wildlife Habitat
g. <input checked="" type="checkbox"/> Ground Water Supply	h. <input checked="" type="checkbox"/> Storm Damage Prevention	i. <input checked="" type="checkbox"/> Flood Control

2. Commission hereby finds the project, as proposed, is:

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands
WPA Form 5 - Order of Conditions
 Massachusetts Wetlands Protection Act M.G.L. c. 131, §40

Provided by MassDEP:
 MassDEP File #:190-0647
 eDEP Transaction #:1218293
 City/Town:HUDSON

Approved subject to:

a. The following conditions which are necessary in accordance with the performance standards set forth in the wetlands regulations. This Commission orders that all work shall be performed in accordance with the Notice of Intent referenced above, the following General Conditions, and any other special conditions attached to this Order. To the extent that the following conditions modify or differ from the plans, specifications, or other proposals submitted with the Notice of Intent, these conditions shall control.

Denied because:

b. The proposed work cannot be conditioned to meet the performance standards set forth in the wetland regulations. Therefore, work on this project may not go forward unless and until a new Notice of Intent is submitted which provides measures which are adequate to protect interests of the Act, and a final Order of Conditions is issued. **A description of the performance standards which the proposed work cannot meet is attached to this Order.**

c. The information submitted by the applicant is not sufficient to describe the site, the work or the effect of the work on the interests identified in the Wetlands Protection Act. Therefore, work on this project may not go forward unless and until a revised Notice of Intent is submitted which provides sufficient information and includes measures which are adequate to protect the interests of the Act, and a final Order of Conditions is issued. **A description of the specific information which is lacking and why it is necessary is attached to this Order as per 310 CMR 10.05(6)(c).**

3. Buffer Zone Impacts: Shortest distance between limit of project disturbance and the wetland resource area specified in 310CMR10.02(1)(a).

C. General Conditions Under Massachusetts Wetlands Protection Act

The following conditions are only applicable to Approved projects

1. Failure to comply with all conditions stated herein, and with all related statutes and other regulatory measures, shall be deemed cause to revoke or modify this Order.
2. The Order does not grant any property rights or any exclusive privileges; it does not authorize any injury to private property or invasion of private rights.
3. This Order does not relieve the permittee or any other person of the necessity of complying with all other applicable federal, state, or local statutes, ordinances, bylaws, or regulations.
4. The work authorized hereunder shall be completed within three years from the date of this Order unless either of the following apply:
 - a. the work is a maintenance dredging project as provided for in the Act; or
 - b. the time for completion has been extended to a specified date more than three years, but less than five years, from the date of issuance. If this Order is intended to be valid for more than three years, the extension date and the special circumstances warranting the extended time period are set forth as a special condition in this Order.
5. This Order may be extended by the issuing authority for one or more periods of up to three years each upon application to the issuing authority at least 30 days prior to the expiration date of the Order.
6. If this Order constitutes an Amended Order of Conditions, this Amended Order of Conditions does not exceed the issuance date of the original Final Order of Conditions.
7. Any fill used in connection with this project shall be clean fill. Any fill shall contain no trash, refuse, rubbish, or debris, including but not limited to lumber, bricks, plaster, wire, lath, paper, cardboard, pipe, tires, ashes, refrigerators, motor vehicles, or parts of any of the foregoing.
8. This Order is not final until all administrative appeal periods from this Order have elapsed, or if such an appeal has been taken, until all proceedings before the Department have been completed.
9. No work shall be undertaken until the Order has become final and then has been recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property. In the case of recorded land, the Final Order shall also be noted in the Registry's Grantor Index under the name of the owner of the land upon which the proposed work is to be done. In the case of the registered land, the Final Order shall also be noted on the Land Court Certificate of Title of the owner of the land upon which the proposed work is done. The recording information shall be submitted to the Conservation Commission on the form at the end of this Order, which form must be stamped by the Registry of Deeds, prior to the commencement of work..
10. A sign shall be displayed at the site not less then two square feet or more than three square feet in size bearing the words,

" Massachusetts Department of Environmental Protection"

**Massachusetts Department of Environmental
Protection**

Bureau of Resource Protection - Wetlands

WPA Form 5 - Order of Conditions

Massachusetts Wetlands Protection Act M.G.L. c. 131, §40

Provided by MassDEP:

MassDEP File #:190-0647

eDEP Transaction #:1218293

City/Town:HUDSON

[or "MassDEP"]
File Number : "190-0647"

11. Where the Department of Environmental Protection is requested to issue a Superseding Order, the Conservation Commission shall be a party to all agency proceedings and hearings before Mass DEP.
12. Upon completion of the work described herein, the applicant shall submit a Request for Certificate of Compliance (WPA Form 8A) to the Conservation Commission.
13. The work shall conform to the plans and special conditions referenced in this order.
14. Any change to the plans identified in Condition #13 above shall require the applicant to inquire of the Conservation Commission in writing whether the change is significant enough to require the filing of a new Notice of Intent.
15. The Agent or members of the Conservation Commission and the Department of Environmental Protection shall have the right to enter and inspect the area subject to this Order at reasonable hours to evaluate compliance with the conditions stated in this Order, and may require the submittal of any data deemed necessary by the Conservation Commission or Department for that evaluation.
16. This Order of Conditions shall apply to any successor in interest or successor in control of the property subject to this Order and to any contractor or other person performing work conditioned by this Order.
17. Prior to the start of work, and if the project involves work adjacent to a Bordering Vegetated Wetland, the boundary of the wetland in the vicinity of the proposed work area shall be marked by wooden stakes or flagging. Once in place, the wetland boundary markers shall be maintained until a Certificate of Compliance has been issued by the Conservation Commission.
18. All sedimentation barriers shall be maintained in good repair until all disturbed areas have been fully stabilized with vegetation or other means. At no time shall sediments be deposited in a wetland or water body. During construction, the applicant or his/her designee shall inspect the erosion controls on a daily basis and shall remove accumulated sediments as needed. The applicant shall immediately control any erosion problems that occur at the site and shall also immediately notify the Conservation Commission, which reserves the right to require additional erosion and/or damage prevention controls it may deem necessary. Sedimentation barriers shall serve as the limit of work unless another limit of work line has been approved by this Order.

NOTICE OF STORMWATER CONTROL AND MAINTENANCE REQUIREMENTS

19. The work associated with this Order(the "Project") is (1) is not (2) subject to the Massachusetts Stormwater Standards. If the work is subject to Stormwater Standards, then the project is subject to the following conditions:
 - a) All work, including site preparation, land disturbance, construction and redevelopment, shall be implemented in accordance with the construction period pollution prevention and erosion and sedimentation control plan and, if applicable, the Stormwater Pollution Prevention Plan required by the National Pollutant Discharge Elimination System Construction General Permit as required by Stormwater Standard 8. Construction period erosion, sedimentation and pollution control measures and best management practices (BMPs) shall remain in place until the site is fully stabilized.
 - b) No stormwater runoff may be discharged to the post-construction stormwater BMPs unless and until a Registered Professional Engineer provides a Certification that: *i.* all construction period BMPs have been removed or will be removed by a date certain specified in the Certification. For any construction period BMPs intended to be converted to post construction operation for stormwater attenuation, recharge, and/or treatment, the conversion is allowed by the MassDEP Stormwater Handbook BMP specifications and that the BMP has been properly cleaned or prepared for post construction operation, including removal of all construction period sediment trapped in inlet and outlet control structures; *ii.* as-built final construction BMP plans are included, signed and stamped by a Registered Professional Engineer, certifying the site is fully stabilized; *iii.* any illicit discharges to the stormwater management system have been removed, as per

- the requirements of Stormwater Standard 10; *iv.* all post-construction stormwater BMPs are installed in accordance with the plans (including all planting plans) approved by the issuing authority, and have been inspected to ensure that they are not damaged and that they are in proper working condition; *v.* any vegetation associated with post-construction BMPs is suitably established to withstand erosion.
- c) The landowner is responsible for BMP maintenance until the issuing authority is notified that another party has legally assumed responsibility for BMP maintenance. Prior to requesting a Certificate of Compliance, or Partial Certificate of Compliance, the responsible party (defined in General Condition 19(e)) shall execute and submit to the issuing authority an Operation and Maintenance Compliance Statement ("O&M Statement") for the Stormwater BMPs identifying the party responsible for implementing the stormwater BMP Operation and Maintenance Plan ("O&M Plan") and certifying the following: *i.*) the O&M Plan is complete and will be implemented upon receipt of the Certificate of Compliance, and *ii.*) the future responsible parties shall be notified in writing of their ongoing legal responsibility to operate and maintain the stormwater management BMPs and implement the Stormwater Pollution Prevention Plan.
 - d) Post-construction pollution prevention and source control shall be implemented in accordance with the long-term pollution prevention plan section of the approved Stormwater Report and, if applicable, the Stormwater Pollution Prevention Plan required by the National Pollutant Discharge Elimination System Multi-Sector General Permit.
 - e) Unless and until another party accepts responsibility, the landowner, or owner of any drainage easement, assumes responsibility for maintaining each BMP. To overcome this presumption, the landowner of the property must submit to the issuing authority a legally binding agreement of record, acceptable to the issuing authority, evidencing that another entity has accepted responsibility for maintaining the BMP, and that the proposed responsible party shall be treated as a permittee for purposes of implementing the requirements of Conditions 19(f) through 19(k) with respect to that BMP. Any failure of the proposed responsible party to implement the requirements of Conditions 19(f) through 19(k) with respect to that BMP shall be a violation of the Order of Conditions or Certificate of Compliance. In the case of stormwater BMPs that are serving more than one lot, the legally binding agreement shall also identify the lots that will be serviced by the stormwater BMPs. A plan and easement deed that grants the responsible party access to perform the required operation and maintenance must be submitted along with the legally binding agreement.
 - f) The responsible party shall operate and maintain all stormwater BMPs in accordance with the design plans, the O&M Plan, and the requirements of the Massachusetts Stormwater Handbook.
 - g) The responsible party shall:
 - 1. Maintain an operation and maintenance log for the last three (3) consecutive calendar years of inspections, repairs, maintenance and/or replacement of the stormwater management system or any part thereof, and disposal (for disposal the log shall indicate the type of material and the disposal location);
 - 2. Make the maintenance log available to MassDEP and the Conservation Commission ("Commission") upon request; and
 - 3. Allow members and agents of the MassDEP and the Commission to enter and inspect the site to evaluate and ensure that the responsible party is in compliance with the requirements for each BMP established in the O&M Plan approved by the issuing authority.
 - h) All sediment or other contaminants removed from stormwater BMPs shall be disposed of in accordance with all applicable federal, state, and local laws and regulations.
 - i) Illicit discharges to the stormwater management system as defined in 310 CMR 10.04 are prohibited.
 - j) The stormwater management system approved in the Order of Conditions shall not be changed without the prior written approval of the issuing authority.
 - k) Areas designated as qualifying pervious areas for the purpose of the Low Impact Site Design Credit (as

D. Findings Under Municipal Wetlands Bylaw or Ordinance

1. Is a municipal wetlands bylaw or ordinance applicable? Yes No

2. The Conservation Commission hereby (check one that applies):

a. DENIES the proposed work which cannot be conditioned to meet the standards set forth in a municipal ordinance or bylaw specifically:

1. Municipal Ordinance or Bylaw _____

2. Citation _____

Therefore, work on this project may not go forward unless and until a revised Notice of Intent is submitted which provides measures which are adequate to meet these standards, and a final Order or Conditions is issued. Which are necessary to comply with a municipal ordinance or bylaw:

b. APPROVES the proposed work, subject to the following additional conditions.

1. Municipal Ordinance or Bylaw _____

2. Citation _____

3. The Commission orders that all work shall be performed in accordance with the following conditions and with the Notice of Intent referenced above. To the extent that the following conditions modify or differ from the plans, specifications, or other proposals submitted with the Notice of Intent, the conditions shall control.

The special conditions relating to municipal ordinance or bylaw are as follows:

E. Signatures

This Order is valid for three years, unless otherwise specified as a special condition pursuant to General Conditions #4, from the date of issuance.

8/24/2020
 1. Date of Issuance

Please indicate the number of members who will sign this form.

5

This Order must be signed by a majority of the Conservation Commission.

2. Number of Signers

The Order must be mailed by certified mail (return receipt requested) or hand delivered to the applicant. A copy also must be mailed or hand delivered at the same time to the appropriate Department of Environmental Protection Regional Office, if not filing electronically, and the property owner, if different from applicant.

By vote on April 2, 2020 the individuals listed below have authorized the Conservation Agent to sign on their behalf pursuant to the signature authorization recorded with the Middlesex South Registry of Deeds Book 74456 Page 40. They also intend for the typed names below to serve as their electronic signature for any entity (MassDEP) that accepts electronic signatures.

F. Appeals

The applicant, the owner, any person aggrieved by this Order, any owner of land abutting the land subject to this Order, or any ten residents of the city or town in which such land is located, are hereby notified of their right to request the appropriate MassDEP Regional Office to issue a Superseding Order of Conditions. The request must be made by certified mail or hand delivery to the Department, with the appropriate filing fee and a completed Request for Departmental Action Fee Transmittal Form, as provided in 310 CMR 10.03(7) within ten business days from the date of issuance of this Order. A copy of the request shall at the same time be sent by certified mail or hand delivery to the Conservation Commission and to the applicant, if he/she is not the appellant.

Any appellants seeking to appeal the Department's Superseding Order associated with this appeal will be required to demonstrate prior participation in the review of this project. Previous participation in the permit proceeding means the submission of written information to the Conservation Commission prior to the close of the public hearing, requesting a Superseding Order, or providing written information to the Department prior to issuance of a Superseding Order.

The request shall state clearly and concisely the objections to the Order which is being appealed and how the Order does not contribute to the protection of the interests identified in the Massachusetts Wetlands Protection Act (M.G.L. c. 131, § 40), and is inconsistent with the wetlands regulations (310 CMR 10.00). To the extent that the Order is based on a municipal ordinance or bylaw, and not on the Massachusetts Wetlands Protection Act or regulations, the Department has no appellate jurisdiction.

(M.G.L. c. 131, § 40), and is inconsistent with the wetlands regulations (310 CMR 10.00). To the extent that the Order is based on a municipal ordinance or bylaw, and not on the Massachusetts Wetlands Protection Act or regulations, the Department has no appellate jurisdiction.

G. Recording Information

This Order of Conditions must be recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property. In the case of recorded land, the Final Order shall also be noted in the Registry's Grantor Index under the name of the owner of the land subject to the Order. In the case of registered land, this Order shall also be noted on the Land Court Certificate of Title of the owner of the land subject to the Order of Conditions. The recording information on this page shall be submitted to the Conservation Commission listed below.

MassDEP File #190-0647

Findings of Fact

Existing Conditions

The Project extends from Sudbury, through small portions of Stow and Marlborough, and into Hudson. The site within Hudson is 4.7 miles in length, of which 3.3 miles is along the existing inactive MBTA ROW from the Hudson/Sudbury municipal border to Wilkins Street. Crossing Wilkins Street, it continues within Town of Hudson–owned property for approximately 230 feet, to connect to the existing Assabet River Rail Trail (ARRT). It also continues southwest within Wilkins Street and Forest Avenue for approximately 1.4 miles to the Hudson Light and Power Substation, which is exempt pursuant to 310 CMR 10.02(2)(b)1.

The following freshwater wetland resource areas are present within or proximate to the Project Site: Bank, LUWW, BVW, BLSF, ILSF, and RFA. Major features consist of wetlands associated with the Assabet River and Fort Meadow Brook. In addition, there are two certified vernal pools within the site and the project passes through a Zone II Wellhead Protection Area associated with Hudson’s public water supply. A portion of the Project Site within the MBTA ROW east of White Pond Road to the Hudson/Sudbury town line is within Priority and Estimated Habitat of rare species.

All wetland resource areas within the Project Site, except for the MCRT Connection to the ARRT, were reviewed and approved in an ORAD, 190-0611, issued February 6, 2018. The additional Resource Areas near the MCRT Connection to the ARRT are approved as part of this Order of Conditions.

The bridge spanning Fort Meadow Brook within the Project Site is severely damaged and is a historic location of beaver dams. Two streams, one perennial (Stream 1) and one intermittent (Stream 3), cross beneath the Project Site through stone and clay culverts, both of which are over 100 years old.

Proposed Conditions

The Project includes installation of a 115 kilovolt underground electric transmission line (Phase 1), followed by completion of a portion of the regional Massachusetts Central Rail Trail (MCRT) (Phase 2) in the same footprint. In addition to the work in the MBTA ROW, the project will include a connection to the existing ARRT alongside the existing parking lot on Wilkins Street and installation of underground transmission line within public roadways for connection to the Hudson Light and Power substation.

Phase 1 of the Project will be implemented by Eversource and will include all major earthwork, bridge reconstruction, construction of the Chestnut Street underpass, installation of the underground transmission line, and the majority of the restoration work. Phase 2 of the Project will be under the control and responsibility of DCR and will include installation of road crossings, paving the MCRT, and final restoration. Long-term, ongoing maintenance shall be the responsibility of DCR.

The limits of work will mostly be 22 feet in width. The final paved bike path will be 10 feet wide. The graded platform will also contain a 5-foot corridor that contains the

Special Conditions Under Massachusetts Wetlands Protection Act
MBTA ROW/Central Mass Line Railroad
MassDEP File #190-0647

underground duct bank. Two-foot shoulders on either side of the path will be loamed and seeded. The remainder of the 22-foot work area will be restored to a naturally vegetated state. In some sensitive environmental areas the work area will be reduced to 18 feet in width, with the duct bank beneath the paved bike path. There will be an access manhole approximately every 1500 feet, which will require a work area 40 feet wide by 50 feet in length. There will be ten such manholes in Hudson, three of which are in jurisdictional areas: one in River Front Area and two in Buffer Zone.

The only BVW disturbance will be at Fort Meadow Brook. The existing bridge is burned and badly damaged and must be replaced. Crane mats will be used to allow cranes to remove the old bridge and install a new single span bridge in its place. Areas disturbed by the crane mats will be restored.

There are some Time-Of-Year (TOY) restrictions set by Natural Heritage and Endangered Species Program (NHESP). Wildlife habitat in critical areas will be restored by replacing dead snags and brush piles that are removed for construction and revegetating the areas. TOY restrictions within Vernal Pool migration areas have been extended to include March 1 through June 1.

Storm water management on the bike path will mostly rely on sheet flow through a vegetated filter strip. There will be some drainage swales with check dams, one leaching catch basin and an infiltration basin at the ARRT trail head.

Maintenance of the bike path will include mowing or weed-whacking the 2-foot shoulders biweekly during the growing season, or as needed, and mowing the 5-foot corridor over the duct bank once a year. Invasive species removal will be by mechanical means when possible and spot treatments of herbicide by a licensed applicator when other approaches are not effective. Trash on the bike path shall be removed and disposed of. Natural debris such as leaves and twigs may be blown off the sides of the bike path except in areas near vernal pools.

Mitigation Plantings

There will be significant reseedling of disturbed Riverfront Area with a seed mix containing both herbaceous and woody vegetation. In addition, 600 woody plantings shall be installed in five areas along the Project corridor. In the Riverfront Area associated with Fort Meadow Brook, approximately 19 trees and 122 shrubs shall be planted in addition to the seed mix, and 40 aquatic plugs shall be installed in the area of BVW disturbed by the crane mats. Shrubs shall also be planted along the 2500 linear feet of Priority Habitat Areas.

Compliance with Applicable Performance Standards:

Both the transmission line and the rail trail qualify as Limited Projects under the Wetlands Protection Act Regulations. The Project complies with all applicable performance standards for BVW, BLSF, and ILSF, but exceeds the 10 percent threshold in the RFA performance standards due to the long, linear nature of the project and disturbs vegetation within the inner 100-foot RFA. This is permitted for Limited Projects if the applicant meets the Performance Standards to the maximum extent practicable. The Commission

Special Conditions Under Massachusetts Wetlands Protection Act
MBTA ROW/Central Mass Line Railroad
MassDEP File #190-0647

was satisfied that this requirement has been met and that mitigation has been provided in the form of restoration plantings in Riverfront Area. There will be no permanent impact to BVW and there will be a minimal increase in flood storage area.

Special Conditions

GENERAL:

19. The Findings of Fact are incorporated as a special condition and given equal status as a special condition of this Order.

Special Conditions Under Massachusetts Wetlands Protection Act
MBTA ROW/Central Mass Line Railroad
MassDEP File #190-0647

20. No excavated material shall be disposed of in violation of any local, state, or federal laws. All stumps must be removed from the site; no burying of stumps on site is permitted.
21. Plantings must be native plants or substitutions only as identified on the approved plans. No invasive vegetation shall be planted.

PRECONSTRUCTION:

22. Within thirty (30) days of the issuance of this Order of Conditions, the applicant, property owner, project representative, or other applicable party must record the original copy of the Order with the Registry of Deeds. Proof of recording is required to be submitted to the Commission or Conservation Agent prior to the pre-construction site visit and commencement of work.
23. Erosion controls shall consist of (a) silt fence or (b) silt fence with compost filter tubes, double-staked straw bales, or wattles, as shown on the plans. Only invasive seed free erosion controls shall be used. Syncopated fencing shall be used within 450 feet of vernal pools. A silt curtain shall be used in Fort Meadow Brook near the bridge if conditions warrant.
24. Prior to the beginning of each Phase, the applicant shall:
 - a. Provide the Conservation Commission with the name and telephone number in writing, of the person who will be immediately responsible for supervision of all work on the project site and compliance with this Order of Conditions. The Conservation Commission shall be notified in the event that the site supervisor or contractor is changed.
 - b. Clearly mark the limits of work in the field and instruct all workers not to work beyond the limits.
 - c. Notify Conservation Commission of the date upon which work will commence and provide the commission with the most up-to-date project timeline and project workflow.
 - d. Properly install all siltation controls according to the plans approved by the Conservation Commission and arrange with the Commission to have a site visit after installation, before work begins.
25. Environmental Monitoring:
 - a. Resumes of Environmental Monitors being considered for the project shall be submitted to the Commission for review.
 - b. If the chosen Environmental Monitor does not have a qualified Vernal Pool Biologist or equivalent, a separate Vernal Pool Specialist shall be hired by the applicant to approve and supervise work within 450 feet of Vernal Pools during the TOY restriction of March 1 to June 1. A qualified Vernal Pool Specialist will have at least three years of experience

Special Conditions Under Massachusetts Wetlands Protection Act
MBTA ROW/Central Mass Line Railroad
MassDEP File #190-0647

conducting vernal pool assessments or surveys in the northeastern United States.

26. A structural engineer shall inspect the culverts conveying Streams 1 and 3 beneath the MBTA ROW within the Project Site to determine whether they are structurally sound to (a) function hydrologically and (b) withstand the planned construction activities, and shall provide a report of the findings to the Commission. If either culvert does not meet these requirements or is damaged during construction, it shall be replaced with a culvert that meets current MA Stream Crossing Standards to the maximum extent practicable, as determined by the Commission or its Agent, during construction.
27. The following final documents shall be provided for review and comment by the Conservation Commission:
 - a. Final Stormwater O&M Plan
 - b. Final Stormwater Pollution Prevention Plan
 - c. Final MOU between Eversource and DCR on Corridor Maintenance and Management
 - d. Soil and Groundwater Management Plan
 - e. Structural Engineer report on culvert conditions

DURING CONSTRUCTION

28. All Time-Of-Year (TOY) construction restrictions and sweeps required by the Natural Heritage and Endangered Species Program shall be followed. Time-of-Year restrictions for work within 450 feet of vernal pools shall be March 1 through June 1. Between March 1 and June 1, the Environmental Monitor shall conduct sweeps prior to vehicles traveling down the Project Site within vernal pool buffers. Between April 1 and Oct 31, the Environmental Monitor shall conduct turtle sweeps prior to initiating work in, or prior to vehicles traveling through, the Box Turtle Protection Area.
29. There shall be a qualified Environmental Monitor on site at all times that work is being performed in jurisdictional wetland areas. The Environmental Monitor shall send weekly reports and reports following any storm events of ½ inch or greater electronically to the Conservation Agent.
30. Detailed construction sequencing and schedules shall be submitted to the Commission electronically, as they are completed or whenever they are revised.
31. The applicant shall endeavor to locate a supplier of pesticide-free seed mixes. All restoration seed mixes shall be pesticide-free if practicable. Documentation of seed sources shall be provided to the Commission, prior to purchase if practicable.
32. Detailed sequencing of the bridge removal work based on water levels and other conditions at the time of removal shall be provided to the Commission prior to commencement of work in this area. A silt curtain shall be used if conditions

Special Conditions Under Massachusetts Wetlands Protection Act
MBTA ROW/Central Mass Line Railroad
MassDEP File #190-0647

warrant. The Conservation Agent shall be notified when bridge removal is to begin and perform a site inspection before work commences. The Conservation Agent shall be kept informed on a daily basis of bridge work to be performed and when the work is complete, and shall perform site inspections before any phase of work as the Commission or Agent deems appropriate.

33. Trash removal shall be performed along the ROW, even outside the limits of work, as practicable. Locations of trash removal shall be determined by a site walk of the applicant and Conservation Agent and/or Commissioner.
34. If dewatering is necessary, water will not be discharged directly into any waterbodies, BVW, or inner 100' of RFA. The Conservation Commission shall be notified in advance if dewatering is required within jurisdictional areas and shall inspect the work site before dewatering commences if such inspection can occur within 24 hours of notification.
35. If on-site excavation or other work reveals any soil contamination in reportable concentrations or quantities, the Conservation Commission shall be notified and shall be copied on all related correspondence.
36. The Conservation Commission shall be notified of any remedial activities or changes to the work plans required due to the potential presence of PFAS in the Zone II wellhead area or other jurisdictional areas.
37. The catch basin at stations 119 shall be a leaching catch basin.
38. All equipment and timber mats shall be cleaned prior to use on the site to prevent the introduction of invasive species. If it is necessary to clean construction equipment while on site, it must be cleaned outside of the 100-foot Buffer Zone, Riverfront Area, or any other Resource Area.

CONSTRUCTION GAP BETWEEN PHASE 1 PHASE II

39. If there is a gap between Phase 1 and Phase 2, erosion controls shall be maintained by Eversource. Erosion control in Priority and Estimated Habitat of Rare Species and within 450 feet of Vernal Pools may require removal. This shall be determined by a site walk with the applicant and Conservation Agent.
40. If there is a gap between Phase 1 and Phase 2, Eversource shall be responsible for the health of the restoration areas and the control of invasive species in these areas.

POSTCONSTRUCTION

41. Prior to the issuance of a Certificate of Compliance the site shall be stabilized with vegetation or other measures approved by the Conservation Commission.
42. Prior to the issuance of a Certificate of Compliance and after the site has been stabilized, all erosion controls shall be removed from the site.
43. Two (2) full growing seasons shall be required to determine that any plantings within buffer zones and/or resource areas or as part of any mitigation plan have successfully

Special Conditions Under Massachusetts Wetlands Protection Act
MBTA ROW/Central Mass Line Railroad
MassDEP File #190-0647

established or may require replanting in case of significant failure.

- a. During this 2-year period, the applicant/property owner shall submit a report from a qualified wetlands scientist or landscape specialist at the end of each growing season describing the condition of the plantings following installation. If greater than 25% of plantings are not in good health then replacement plantings are required.
 - b. The consultant shall prepare a final report on the status of the plantings as part of the Request for a Certificate of Compliance. Successful establishment of the plantings will mean that at least 75% of the plantings have survived and are in good health and that the planting is free of invasive species. Successful establishment is a requirement for the issuance of a Certificate of Compliance.
44. Prior to the issuance of a Certificate of Compliance, the applicant shall submit to the Conservation Commission for review and approval an as-built plan and a letter of compliance stamped by a registered professional engineer. Said plan and letter shall show that all conditions of this Order have been complied with in substantial compliance with the Order and explain any differences from the approved plans.

CONDITIONS IN PERPETUITY

45. When maintaining the path, no debris including natural debris such as leaves and twigs shall be blown or swept from the bike path into areas within 25 feet of vernal pools. The boundaries of these areas shall be indicated with a method to be determined before the Certificate of Compliance is granted. This Condition is ongoing and does not expire with the expiration of the Order of Conditions or the issuance of a Certificate of Compliance.
46. The culverts beneath the ROW shall be inspected and cleared of debris at least annually. If the culverts become damaged or no longer function as required, they shall be replaced according to the most current MA Stream Crossing Standards. This Condition is ongoing and does not expire with the expiration of the Order of Conditions or the issuance of a Certificate of Compliance.
47. DCR shall notify the Commission in advance if herbicides are to be used for vegetation control within wetland jurisdictional areas, indicating the target control species, the type(s) of herbicide to be used, and the on-going maintenance plan for the targeted area. This Condition is ongoing and does not expire with the expiration of the Order of Conditions or the issuance of a Certificate of Compliance.

B. Findings (cont.)

* #22. If the project is for the purpose of restoring or enhancing a wetland resource area in addition to the square footage that has been entered in Section B.5.c (BVW) or B.17.c (Salt Marsh) above, please enter the additional amount here.

22. Restoration/Enhancement *:

a. square feet of BVW

b. square feet of salt marsh

23. Stream Crossing(s):

a. number of new stream crossings

b. number of replacement stream crossings

C. General Conditions Under Massachusetts Wetlands Protection Act

The following conditions are only applicable to Approved projects.

1. Failure to comply with all conditions stated herein, and with all related statutes and other regulatory measures, shall be deemed cause to revoke or modify this Order.
2. The Order does not grant any property rights or any exclusive privileges; it does not authorize any injury to private property or invasion of private rights.
3. This Order does not relieve the permittee or any other person of the necessity of complying with all other applicable federal, state, or local statutes, ordinances, bylaws, or regulations.
4. The work authorized hereunder shall be completed within three years from the date of this Order unless either of the following apply:
 - a. the work is a maintenance dredging project as provided for in the Act; or
 - b. the time for completion has been extended to a specified date more than three years, but less than five years, from the date of issuance. If this Order is intended to be valid for more than three years, the extension date and the special circumstances warranting the extended time period are set forth as a special condition in this Order.
5. This Order may be extended by the issuing authority for one or more periods of up to three years each upon application to the issuing authority at least 30 days prior to the expiration date of the Order.
6. If this Order constitutes an Amended Order of Conditions, this Amended Order of Conditions does not extend the issuance date of the original Final Order of Conditions and the Order will expire on 7/10/2023 unless extended in writing by the Department.
7. Any fill used in connection with this project shall be clean fill. Any fill shall contain no trash, refuse, rubbish, or debris, including but not limited to lumber, bricks, plaster, wire, lath, paper, cardboard, pipe, tires, ashes, refrigerators, motor vehicles, or parts of any of the foregoing.
8. This Order is not final until all administrative appeal periods from this Order have elapsed, or if such an appeal has been taken, until all proceedings before the Department have been completed.

9. No work shall be undertaken until the Order has become final and then has been recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property. In the case of recorded land, the Final Order shall also be noted in the Registry's Grantor Index under the name of the owner of the land upon which the proposed work is to be done. In the case of the registered land, the Final Order shall also be noted on the Land Court Certificate of Title of the owner of the land upon which the proposed work is done. The recording information shall be submitted to the Conservation Commission on the form at the end of this Order, which form must be stamped by the Registry of Deeds, prior to the commencement of work.
10. A sign shall be displayed at the site not less than two square feet or more than three square feet in size bearing the words,

"Massachusetts Department of Environmental Protection" [or, "MassDEP"]
"File Number 299-677 "
11. Where the Department of Environmental Protection is requested to issue a Superseding Order, the Conservation Commission shall be a party to all agency proceedings and hearings before MassDEP.
12. Upon completion of the work described herein, the applicant shall submit a Request for Certificate of Compliance (WPA Form 8A) to the Conservation Commission.
13. The work shall conform to the plans and special conditions referenced in this order.
14. Any change to the plans identified in Condition #13 above shall require the applicant to inquire of the Conservation Commission in writing whether the change is significant enough to require the filing of a new Notice of Intent.
15. The Agent or members of the Conservation Commission and the Department of Environmental Protection shall have the right to enter and inspect the area subject to this Order at reasonable hours to evaluate compliance with the conditions stated in this Order, and may require the submittal of any data deemed necessary by the Conservation Commission or Department for that evaluation.
16. This Order of Conditions shall apply to any successor in interest or successor in control of the property subject to this Order and to any contractor or other person performing work conditioned by this Order.
17. Prior to the start of work, and if the project involves work adjacent to a Bordering Vegetated Wetland, the boundary of the wetland in the vicinity of the proposed work area shall be marked by wooden stakes or flagging. Once in place, the wetland boundary markers shall be maintained until a Certificate of Compliance has been issued by the Conservation

Commission.

C. General Conditions Under Massachusetts Wetlands Protection Act (cont.)

18. All sedimentation barriers shall be maintained in good repair until all disturbed areas have been fully stabilized with vegetation or other means. At no time shall sediments be deposited in a wetland or water body. During construction, the applicant or his/her designee shall inspect the erosion controls on a daily basis and shall remove accumulated sediments as needed. The applicant shall immediately control any erosion problems that occur at the site and shall also immediately notify the Conservation Commission, which reserves the right to require additional erosion and/or damage prevention controls it may deem necessary. Sedimentation barriers shall serve as the limit of work unless another limit of work line has been approved by this Order.

NOTICE OF STORMWATER CONTROL AND MAINTENANCE REQUIREMENTS

19. **The work associated with this Order (the "Project") is (1) is not (2) subject to the Massachusetts Stormwater Standards. If the work is subject to the Stormwater Standards, then the project is subject to the following conditions:**

a) All work, including site preparation, land disturbance, construction and redevelopment, shall be implemented in accordance with the construction period pollution prevention and erosion and sedimentation control plan and, if applicable, the Stormwater Pollution Prevention Plan required by the National Pollution Discharge Elimination System Construction General Permit as required by Stormwater Condition 8. Construction period erosion, sedimentation and pollution control measures and best management practices (BMPs) shall remain in place until the site is fully stabilized.

b) No stormwater runoff may be discharged to the post-construction stormwater BMPs unless and until a Registered Professional Engineer provides a Certification that:

- i. all construction period BMPs have been removed or will be removed by a date certain specified in the Certification. For any construction period BMPs intended to be converted to post construction operation for stormwater attenuation, recharge, and/or treatment, the conversion is allowed by the MassDEP Stormwater Handbook BMP specifications and that the BMP has been properly cleaned or prepared for post construction operation, including removal of all construction period sediment trapped in inlet and outlet control structures;
- ii. as-built final construction BMP plans are included, signed and stamped by a Registered Professional Engineer, certifying the site is fully stabilized;
- iii. any illicit discharges to the stormwater management system have been removed, as per the requirements of Stormwater Standard 10;
- iv. all post-construction stormwater BMPs are installed in accordance with the plans (including all planting plans) approved by the issuing authority, and have been inspected to ensure that they are not damaged and that they are in proper working condition;
- v. any vegetation associated with post-construction BMPs is suitably established to withstand erosion.

C. General Conditions Under Massachusetts Wetlands Protection Act (cont.)

- c) The landowner is responsible for BMP maintenance until the issuing authority is notified that another party has legally assumed responsibility for BMP maintenance. Prior to requesting a Certificate of Compliance, or Partial Certificate of Compliance, the responsible party (defined in General Condition 18(e)) shall execute and submit to the issuing authority an Operation and Maintenance Compliance Statement ("O&M Statement") for the Stormwater BMPs identifying the party responsible for implementing the stormwater BMP Operation and Maintenance Plan ("O&M Plan") and certifying the following: *i.*) the O&M Plan is complete and will be implemented upon receipt of the Certificate of Compliance, and *ii.*) the future responsible parties shall be notified in writing of their ongoing legal responsibility to operate and maintain the stormwater management BMPs and implement the Stormwater Pollution Prevention Plan.
- d) Post-construction pollution prevention and source control shall be implemented in accordance with the long-term pollution prevention plan section of the approved Stormwater Report and, if applicable, the Stormwater Pollution Prevention Plan required by the National Pollution Discharge Elimination System Multi-Sector General Permit.
- e) Unless and until another party accepts responsibility, the landowner, or owner of any drainage easement, assumes responsibility for maintaining each BMP. To overcome this presumption, the landowner of the property must submit to the issuing authority a legally binding agreement of record, acceptable to the issuing authority, evidencing that another entity has accepted responsibility for maintaining the BMP, and that the proposed responsible party shall be treated as a permittee for purposes of implementing the requirements of Conditions 18(f) through 18(k) with respect to that BMP. Any failure of the proposed responsible party to implement the requirements of Conditions 18(f) through 18(k) with respect to that BMP shall be a violation of the Order of Conditions or Certificate of Compliance. In the case of stormwater BMPs that are serving more than one lot, the legally binding agreement shall also identify the lots that will be serviced by the stormwater BMPs. A plan and easement deed that grants the responsible party access to perform the required operation and maintenance must be submitted along with the legally binding agreement.
- f) The responsible party shall operate and maintain all stormwater BMPs in accordance with the design plans, the O&M Plan, and the requirements of the Massachusetts Stormwater Handbook.

C. General Conditions Under Massachusetts Wetlands Protection Act (cont.)

- g) The responsible party shall:
 1. Maintain an operation and maintenance log for the last three (3) consecutive calendar years of inspections, repairs, maintenance and/or replacement of the stormwater management system or any part thereof, and disposal (for disposal the log shall indicate the type of material and the disposal location);
 2. Make the maintenance log available to MassDEP and the Conservation Commission ("Commission") upon request; and
 3. Allow members and agents of the MassDEP and the Commission to enter and inspect the site to evaluate and ensure that the responsible party is in compliance with the requirements for each BMP established in the O&M Plan approved by the issuing authority.

- h) All sediment or other contaminants removed from stormwater BMPs shall be disposed of in accordance with all applicable federal, state, and local laws and regulations.
- i) Illicit discharges to the stormwater management system as defined in 310 CMR 10.04 are prohibited.
- j) The stormwater management system approved in the Order of Conditions shall not be changed without the prior written approval of the issuing authority.
- k) Areas designated as qualifying pervious areas for the purpose of the Low Impact Site Design Credit (as defined in the MassDEP Stormwater Handbook, Volume 3, Chapter 1, Low Impact Development Site Design Credits) shall not be altered without the prior written approval of the issuing authority.
- l) Access for maintenance, repair, and/or replacement of BMPs shall not be withheld. Any fencing constructed around stormwater BMPs shall include access gates and shall be at least six inches above grade to allow for wildlife passage.

D. Findings Under Municipal Wetlands Bylaw or Ordinance

1. Is a municipal wetlands bylaw or ordinance applicable? Yes No
2. The Stow Conservation Commission hereby finds (check one that applies):
- a. that the proposed work cannot be conditioned to meet the standards set forth in a municipal ordinance or bylaw, specifically:

1. Municipal Ordinance or Bylaw _____ 2. Citation _____

Therefore, work on this project may not go forward unless and until a revised Notice of Intent is submitted which provides measures which are adequate to meet these standards, and a final Order of Conditions is issued.

- b. that the following additional conditions are necessary to comply with a municipal ordinance or bylaw:

Stow Wetlands Bylaw

1. Municipal Ordinance or Bylaw _____ 2. Citation _____

3. The Commission orders that all work shall be performed in accordance with the following conditions and with the Notice of Intent referenced above. To the extent that the following conditions modify or differ from the plans, specifications, or other proposals submitted with the Notice of Intent, the conditions shall control.

The special conditions relating to municipal ordinance or bylaw are as follows (if you need more space for additional conditions, attach a text document):
see attached

ORDER OF CONDITIONS #299-677

**Massachusetts Wetlands Protection Act and Town of Stow Wetland Bylaw
Off Marlboro Road, Stow, MA
Assessors Map U7, Parcel 3**

List of Submittals for the Record

From the Applicant:

- Notice of Intent with Stormwater Management Report
- Mass Central Rail Trail Plans, last revised 3/4/20, 9 sheets
- Transmission Line Plans along MTBA Right of Way, last revised 3/4/20, 19 sheets
- Cover Letter and Supplemental Riverfront Area Narrative Submitted for Eversource by VHB dated 3/4/20
- Memo from VHB re: Sudbury-Hudson Soil and Groundwater Analytical Results, dated 3/18/20
- Email from VHB re Soil and Groundwater Sampling Results dated 3/23/20
- Response to Questions about Soil and Groundwater Sampling Results, dated 3/30/20

From Members of the Public, Organizations and Officials

- Email from Laurel Cohen dated 2/28/20 re project concerns
- Email from Laurel and Steve Cohen dated 4/7/20 re project concerns
- Email from Margaret Costello with attached public hearing statement dated 3/6/20
- Email from Rebecca Cutting (Sudbury) dated 3/5/20
- Email from David Gray regarding project hearing dated 3/4/20
- Email with letter from Bhaïrd Campbell dated 4/6/20 re procedural questions
- Copy of Letter from Sen. James Eldridge, Rep. Kate Hogan, Rep Carmine Gentile to Jim Montgomery, Commission of Department of Conservation and Recreation re project concerns, dated 5/14/20 and email transmitting letter
- Email/Letter from Bhaïrd Campbell dated 4/6/20 re procedural concerns.
- Letter from Sudbury Valley Trustees dated 4/2/20 re project concerns
- Letter from Protect Sudbury Inc. dated 4/2/20 re project concerns with seven attachments
- Email from Gleasondale Steering Committee dated 5/28/20 re project concerns
- Statement from Margaret Costello for the record, dated 6/2/20
- Email and List of Questions from Rebecca Cutting of Sudbury dated 6/2/20

From Regional Conservation Commissions

- Peer Review for the Town of Hudson Conservation Commission by WDA Design Group, dated 3/11/20
- Letter from VHB responding to Hudson Peer Review on behalf of Applicants, dated 3/13/20
- Follow up Peer Review Letter from the Town of Hudson Conservation Commission by WDA Design Group, dated 4/9/20
- Peer Review for the Town of Sudbury Conservation Commission by BETA, dated 5/11/20

- "Conservation Commission and Public Comments on the Eversource/DCR Notice of Intent Application", undated, from the Sudbury Conservation Commission

Other Materials

- DEP Best Management Practices for Controlling Exposure to Soil during the Development of Rail Trails, undated.
- Energy Facilities Siting Board Decision, dated 12/18/19
- Letter from Mass DEP to MEPA Commenting on Draft EIR, dated 12/8/17

Conservation Commission Findings:

1. The applicants have filed a Notice of Intent for work proposed within an area subject to regulation under the Massachusetts Wetlands Protection Act and the Town of Stow Wetlands Protection Bylaw and Regulations.
2. NSTAR Electric Company d/b/a Eversource Energy ("Eversource") and the Mass Department of Conservation and Recreation ("DCR") are applying jointly for Eversource to install a 115 kV underground electric transmission line and for DCR to complete construction of a 10 foot wide multi-use path along a portion of the Massachusetts Bay Transportation Authority right-of-way, an inactive railroad right of way. The stated goal of the transmission line is to improve reliability of electric service in the region and the goal of the multi-use path is to advance a regional multi-use trail project. The construction would extend from Sudbury, through Stow and Marlboro and into Hudson. The portion of the project in Stow is approximately 350 feet long and entirely within the railroad right of way between Wilkins Street and Chestnut Street.
3. The project will be built in two phases: Phase 1 will be completed by Eversource and will entail vegetation clearing, installation of erosion controls, removal of existing railroad track and ties, site preparation, installation of the underground transmission line, grading, stormwater controls, installation of a final gravel base and site stabilization. Eversource will be responsible for the property until Phase 2 commences. Phase 2 will be completed by the MA Department of Conservation and Recreation and would entail paving of the multi-use recreational path, grading, final seeding, signage and access controls. The timing of commencement of both phases is unclear at this time, given pending appeals and funding issues.
4. The Eversource portion of the project has received approval from the Energy Facilities Siting Board in a decision dated 12/18/19.
5. Riverfront Area Impacts: Portions of the proposed work are within the Riverfront Area to an unnamed perennial stream which flows into the Assabet River, the 100' buffer zone to Bordering Vegetated Wetlands (BVW), and within the 100' buffer zone to Bordering Land Subject to Flooding under the Town of Stow Wetlands Protection Bylaw. The total Riverfront Area alteration is 5,111 square feet, all of which is in the Outer Riparian Zone. Of this, 1,751 sq. ft. is permanent disturbance and 3,360 sq. ft. is temporary disturbance. There is a total of 13,925 square feet of Riverfront Area on the property. This means that the amount of total alteration (and permanent alteration) is greater than the 10% performance standard in the Wetlands Protection Act.

6. Buffer Zone Impacts: The amount of disturbance to the 100' buffer to BVW is a total of 3,602 sq. ft. of which 1,357 sq. ft. is permanent disturbance and 2,245 sq. ft. is temporary disturbance.
7. BLSF Buffer Zone Impacts (Bylaw): The amount of disturbance to the 100' buffer to BLSF is a total of 9,246 sq. ft., of which 3,399 sq.ft. is permanent disturbance and 5,847 sq. ft. is temporary disturbance. The Town of Stow Wetlands Bylaw and Regulations contain no performance standards for this resource area. No work will occur within Bordering Land Subject to Flooding.
8. Both the underground transmission line and the rail trail qualify as limited projects under the Wetlands Protection Act Regulations. Reference is made to Sections 310 CMR 10.53(3)(d) [Construction of underground and overhead public utilities] and 10.53 (6) [bikepaths to or along Riverfront Areas]. The Commission has the authority to waive strict compliance with the performance standards and require compliance to the maximum extent feasible for such limited projects.
9. The Commission finds that the two phases of the project as proposed are limited projects and that the applicant has complied with the Riverfront Area performance standards to the maximum extent feasible.
10. The applicant has also argued that portions of the Riverfront Area are previously developed pursuant to the meaning of that term in 310 CMR 10.58(5) of the Wetlands Protection Act regulations. The Commission makes no finding as to whether the Riverfront Area on the project site is "previously developed" within the meaning of the regulations, as no such finding is needed to allow the project to proceed in Stow given the previous finding relative to limited projects.
11. There is no Estimated Habitat of Rare Species within the project locus in Stow and no certified or potential vernal pools.
12. No work will occur within the 35' undisturbed buffer area required by the Town of Stow Wetlands Protection Bylaw and Regulations.
13. Concern was expressed at the public hearing by members of the public that contaminated soils may be disturbed during project construction. No documentation was provided as to actual contamination at the project locus and none are listed on DEP's online inventory of waste sites in Massachusetts. Eversource performed limited soil testing, however none of this testing was completed in Stow. The applicant is required to comply with DEP's Massachusetts Contingency Plan requirements, where applicable, as well as DEP Best Management Practices for Controlling Exposure to Soil during the Development of Rail Trails (undated).
14. Information submitted by the applicant indicates that groundwater flow in the area is roughly from north to south. No evidence was provided at the public hearings to the contrary.

15. Concern has been expressed by some members of the public about the use of herbicides for vegetation management along the right of way. In Phase 1, and until the initiation of Phase 2, no herbicides will be used, and all vegetation removal will be strictly mechanical. The Department of Conservation and Recreation will be responsible for long-term vegetation management along the rail trail right of way following the Completion of Phase 2. They have indicated that most vegetation management along the right of way will be done mechanically, but are seeking to use herbicides selectively, as a tool of last resort to address difficult to manage species such as bittersweet in tree canopies, poison ivy and Japanese knotweed. All herbicide application would be by a licensed pesticide applicator using commonly available general (not restricted) use pesticides and in accordance with a Vegetation Management Plan.
16. The Commission held a duly noticed public hearing on March 4, 2020 at which testimony was taken on the project. The hearing was subsequently continued without further testimony to April 7, 2020, April 21, 2020, and May 19, 2020. On May 19, 2020, the hearing was continued to June 2, 2020 at which time a second public hearing was held. The hearing was held by remote participation pursuant to Governor Baker's March 12, 2020 Order Suspending Certain Provisions of the Open Meeting Law, Chapter 53 of the Acts of 2020, G.L. c. 30A, §18, and the Governor's March 15, 2020 Order imposing strict limitation on the number of people that may gather in one place. The hearing was closed on June 2, 2020. Interested parties were given ample opportunities for written and verbal comments on the project.
17. The Commission has voted to issue an Order of Conditions with the above findings and the following special conditions, together with DEP's general conditions, all of which are necessary to enable the project to be in compliance with the Wetlands Protection Act and regulations and the Town of Stow Wetlands Bylaw and regulations.

Special Conditions for Phases 1 and 2

Pre-Construction Conditions – Phases 1 and 2

21. The form provided at the end of this Order shall be completed and stamped at the Middlesex Registry of Deeds. This form shall be returned to the Commission in accordance with General Condition #8, and prior to the commencement of Phase 1.
22. All work shall be performed in accordance with the final plans as described in the Notice of Intent or as specified in this Order of Conditions. No filling or excavating of land beyond the limits or above the grades on the submitted plans is authorized. Any deviation from the approved plans shall require prior approval from the Stow Conservation Commission. This may require resubmission or modification of the Notice of Intent.
23. At least 45 days prior to the anticipated start of Phase 1 construction, the following final documents shall be provided for review and approval of the Stow Conservation Commission or their designee:

a) Two copies of the final dated and stamped construction plans (all pages shall be stamped) for the Stow portion of the Eversource transmission line with the following revisions made to the plans:

i) The location of any construction stockpiles shall be shown on the plans along with a detail for protecting stockpiles from erosion by water and wind at the end of each workday. All stockpiles shall be within the limit of work.

ii) A note shall be added to the dewatering detail indicating that the Conservation Commission shall be notified in advance of any planned dewatering and must approve this work in the field prior to commencing dewatering.

iii) Erosion control barriers shall either be shown as continuous, with straw wattle used to demarcate the limit of work in all areas where the plans do not show erosion controls, or plastic construction fencing shall be used to mark the limit of work in these areas. The plans shall show a continuous physical barrier along the right of way which shall serve as a limit of work.

iv) A note shall be added indicating that the Conservation Commission shall be notified in the event that dust controls beyond water spraying is required on the project site.

b) Two copies of the final stamped plans (all pages shall be stamped) of the DCR Rail Trail construction plans. If these plans are subsequently modified, updated plans shall be provided at least 45 days prior to the start of Phase 2 for the Commission's review and approval.

i) The location of any construction stockpiles shall be shown on the plans along with a spec for stockpile management.

ii) Erosion control barriers shall either be continuous, with straw wattle used to demarcate the limit of work in all areas where the plans do not show erosion controls or plastic construction fencing shall be used to mark the limit of work in these areas.

c) A copy of the final Stormwater O&M Plan.

d) A copy of the final Soil and Groundwater Management Plan.

e) A copy of the MOU between Eversource and DCR on Corridor Maintenance and Management.

The review of these plans and documents shall be limited to a determination of consistency with prior submittals and the conditions of this decision.

24. **At least one week prior to the anticipated start of Phase 1 construction by Eversource, the Stow Conservation Commission shall be notified and given the opportunity to inspect the erosion controls and participate in a pre-construction site meeting. The following shall be provided at or prior to the pre-construction meeting:**

a) The applicant shall advise the Commission of the name(s) and contact numbers(s) of the person(s) responsible on site for compliance with this Order, including the on-site Environmental Monitor.

b) A copy of this Order including final plans shall be on the site upon commencement and during any site work for contractors to view and adhere to.

- c) The Certificate of Understanding for this project must be signed by Eversource and the on-site supervisor responsible for the project(s).
- d) A project schedule must be provided to the Commission.
- e) If wetland flagging is no longer obvious in the field, these flags shall be replaced prior to the pre-construction site meeting.
- f) The DEP file number sign shall be posted as required by the general conditions.

25. **At least one week prior to the anticipated start of Phase 2 construction by the Department of Conservation and Recreation (DCR), the Stow Conservation Commission shall be notified and given the opportunity to inspect the erosion controls and participate in a Phase 2 pre-construction site meeting. The following shall be provided at or prior to the pre-construction meeting:**

- a) The applicant shall advise the Commission of the name(s) and contact numbers(s) of the person(s) responsible on site for compliance with this Order, including the on-site Environmental Monitor.
- b) A copy of this Order including final plans shall be on the site upon commencement and during any site work for contractors to view and adhere to.
- c) The Certificate of Understanding for this project must be signed by DCR and the on-site supervisor responsible for the project(s).
- d) A project schedule must be provided to the Commission.
- e) If wetland flagging is no longer obvious in the field, these flags shall be replaced prior to the pre-construction site meeting.
- f) The DEP file number sign shall be posted as required by the general conditions.

During Construction Conditions – Phases 1 and 2

- 26. The Stow Conservation Commission shall be notified of the time and location of regular project meetings relative to construction within the Town of Stow and provided with copies of meeting notes as applicable.
- 27. Sediment and erosion control devices shall be installed in accordance with the final plan by Eversource prior to the beginning of Phase 1 construction, and shall be maintained for the duration of construction on the site. **If there is a gap between Phase 1 and Phase 2, Eversource shall be responsible for monitoring and maintaining erosion controls and site stabilization until Phase 2 commences or until a Partial Certificate of Compliance is issued for Phase 1 in accordance with the condition below. A second erosion control barrier inspection shall be required prior to the commencement of Phase 2, and the Commission may require that erosion controls be replaced or repaired by the Department of Conservation and Recreation at this time in order to maintain their full functionality.**
- 28. The erosion controls shall serve as a limit of work and no activity, including stockpiling or storage of material, is permitted beyond the sediment controls. The sediment and erosion control specifications in this Order and on the final plans will be the minimum standards for this project; the Commission may require additional measures. These will be maintained in good repair until the disturbed area is re-vegetated and stabilized to the

satisfaction of the Stow Conservation Commission at which time they must be removed. **The Stow Conservation Commission shall be contacted and approval obtained prior to removal of sediment and erosion controls.**

29. The areas of construction shall remain in a stable condition at the close of each construction day. All trenches shall be backfilled or secured at the completion of each work day. Sediment and erosion controls shall be inspected daily and repaired or reinforced or replaced as necessary, with any accumulated sediments removed as needed. A stockpile of additional sediment and erosion controls shall be maintained on the site for this purpose.
30. The Commission shall be notified if dewatering is deemed necessary during construction activities and given an opportunity to review the proposed location and method of dewatering prior to the commencement of dewatering activities. No direct discharge to a waterbody is permitted. No overland discharge of water is allowed within 100 feet of vegetated wetlands.
31. Concrete wash-out water shall not be discarded within the 100' buffer or within 100' of any drainage system that may discharge to wetlands or outside of the limit of work. All washout materials will be managed with an appropriate BMP. If concrete is spilled during construction, spilled materials shall be removed from the buffer zone and disposed of properly.
32. SWPPP Inspection reports shall be provided to the Commission electronically within 48 hours of completion. The Commission shall be kept apprised of any corrective actions needed and taken.
33. If on-site excavation or other site work during Phase 1 or Phase 2 reveals any soil contamination in reportable concentrations or quantities, the Stow Conservation Commission shall receive notification concurrent with Mass DEP and shall be copied on all correspondence relating to site investigation and remedial actions. Remedial activities may require filing of an additional Notice of Intent in accordance with the Wetlands Protection Act and Stow Wetlands Bylaw.
34. If disturbed areas are not permanently stabilized by the end of the growing season, the owner must monitor the area and install or repair sediment and erosion controls to protect the resource area until the site is stabilized.
35. There shall be no outside storage of chemicals, oil, fuel, fertilizer, or other potentially hazardous materials within the limit of work. No refueling shall occur within the 100' buffer. A spill containment kit shall be kept on site at all times.
36. All waste and excavated material including railroad ties and tracks shall be disposed of in accordance with applicable laws. Any fill or borrow material brought onto the project site in Stow from outside of Stow shall be 1) re-located from qualified immediately adjacent residential areas per DEP's *Best Management Practices for Controlling Exposure to soil during the Development of Rail Trails*; 2) certified as clean fill by the supplier; or 3) subject to analytical testing.

37. All imported soils shall be clean and reasonably free of invasive species. No soil contaminated with Japanese knotweed and/or knotweed rhizomes may be reused in Stow. The Environmental Monitor shall identify and document any areas contaminated with Japanese knotweed within 500' of the eastern and western Town of Stow line prior to commencing construction.

Closing the Project

38. Eversource shall notify the Commission upon the completion of the work in Phase 1. Eversource shall be required to maintain erosion controls and site stabilization until a Phase 1 Partial Certificate of Compliance is received by Eversource or the Conservation Commission receives formal notification via DCR that they are commencing Phase 2 and a Certificate of Understanding is received from DCR per Condition #25.
39. **Certificates of Compliance:**

Phase 1:

If Eversource desires a Partial Certificate of Compliance, it may submit the following to the Stow Conservation Commission:

- a. A letter from the applicant requesting a Partial Certificate of Compliance.
- b. A written statement from a registered professional engineer of the Commonwealth and as-built plan signed and stamped by a registered professional engineer or land surveyor certifying that the project has been constructed as shown on the plan(s) and documents referenced above, and as conditioned by the Commission.
- c. A letter from the Department of Conservation and Recreation assuming responsibility for the management of the site beginning on the date of issuance of the Partial Certificate of Compliance.

Phase 2:

At time that the Department of Conservation and Recreation desires to receive a final Certificate of Compliance, the following must be submitted:

- a. A letter from the applicant requesting a Final Certificate of Compliance.
- b. A written statement from a registered professional engineer of the Commonwealth and as-built plan signed and stamped by a registered professional engineer or land surveyor certifying that the project has been constructed as shown on the plan(s) and documents referenced above, and as conditioned by the Commission.
- c. A plan for the long-term maintenance and vegetation management of the project site consistent with the Perpetual Conditions in this Order of Conditions.

Alternatively, if Phase 2 is abandoned, and the site is fully stabilized, Eversource may submit a request for a Final Certificate of Compliance at the conclusion of Phase 1 with the following:

- a. A letter from the Department of Conservation and Recreation indicating that Phase 2 has been abandoned
- b. A plan for the long-term maintenance and vegetation management of the project site consistent with the Perpetual Conditions in this Order of Conditions and any other restrictions applicable.

Perpetual Conditions

The following conditions will be included in the Certificate of Compliance and will continue in perpetuity:

40. No dumping of leaves, woody debris, dog waste, excessive snow and any other materials is permitted in or within 100' of wetland resource areas, including the Riverfront Area.

41. Herbicide may be applied by the owner/operator or its agents and contractors under an approved Vegetation Management Plan and annual Yearly Operating Plan authorized by the Massachusetts Department of Agricultural Resources. The Stow Conservation Commission shall be provided a copy of these Plans. Mechanical treatment shall be preferred with herbicide used only to control difficult species such as bittersweet, Japanese knotweed, poison ivy or other similar species which may occur along the recreational trail. Any herbicide use shall be limited to general use herbicides applied by a licensed pesticide applicator. If the Town of Hudson restricts the use of herbicides within the Zone 2 of the Cranberry water supply well, these restrictions shall also apply within the Stow portion of the Zone 2.

F. Appeals

The applicant, the owner, any person aggrieved by this Order, any owner of land abutting the land subject to this Order, or any ten residents of the city or town in which such land is located, are hereby notified of their right to request the appropriate MassDEP Regional Office to issue a Superseding Order of Conditions. The request must be made by certified mail or hand delivery to the Department, with the appropriate filing fee and a completed Request of Departmental Action Fee Transmittal Form, as provided in 310 CMR 10.03(7) within ten business days from the date of issuance of this Order. A copy of the request shall at the same time be sent by certified mail or hand delivery to the Conservation Commission and to the applicant, if he/she is not the appellant.

Any appellants seeking to appeal the Department's Superseding Order associated with this appeal will be required to demonstrate prior participation in the review of this project. Previous participation in the permit proceeding means the submission of written information to the Conservation Commission prior to the close of the public hearing, requesting a Superseding Order, or providing written information to the Department prior to issuance of a Superseding Order.

The request shall state clearly and concisely the objections to the Order which is being appealed and how the Order does not contribute to the protection of the interests identified in the Massachusetts Wetlands Protection Act (M.G.L. c. 131, § 40), and is inconsistent with the wetlands regulations (310 CMR 10.00). To the extent that the Order is based on a municipal

B. Findings

I. Findings pursuant to the Massachusetts Wetlands Protection Act

Following the review of the the above-referenced Notice of Intent and based on the information provided in this application and presented at the public hearing, this Commission finds that the areas in which work is proposed is significant to the following interests of the Wetlands Protection Act.

Check all that apply:

<input checked="" type="checkbox"/> a. Public Water Supply	<input checked="" type="checkbox"/> b. Land Containing Shellfish	<input checked="" type="checkbox"/> c. Prevention of Pollution
<input checked="" type="checkbox"/> d. Private Water Supply	<input checked="" type="checkbox"/> e. Fisheries	<input checked="" type="checkbox"/> f. Protection of Wildlife Habitat
<input checked="" type="checkbox"/> g. Ground Water Supply	<input checked="" type="checkbox"/> h. Storm Damage Prevention	<input checked="" type="checkbox"/> i. Flood Control

2. Commission hereby finds the project, as proposed, is:

Approved subject to:

a. The following conditions which are necessary in accordance with the performance standards set forth in the wetlands regulations. This Commission orders that all work shall be performed in accordance with the Notice of Intent referenced above, the following General Conditions, and any other special conditions attached to this Order. To the extent that the following conditions modify or differ from the plans, specifications, or other proposals submitted with the Notice of Intent, these conditions shall control.

Denied because:

b. The proposed work cannot be conditioned to meet the performance standards set forth in the wetland regulations. Therefore, work on this project may not go forward unless and until a new Notice of Intent is submitted which provides measures which are adequate to protect interests of the Act, and a final Order of Conditions is issued. **A description of the performance standards which the proposed work cannot meet is attached to this Order.**

c. The information submitted by the applicant is not sufficient to describe the site, the work or the effect of the work on the interests identified in the Wetlands Protection Act. Therefore, work on this project may not go forward unless and until a revised Notice of Intent is submitted which provides sufficient information and includes measures which are adequate to protect the interests of the Act, and a final Order of Conditions is issued. **A description of the specific information which is lacking and why it is necessary is attached to this Order as per 310 CMR 10.05(6)(c).**

3. Buffer Zone Impacts: Shortest distance between limit of project disturbance and the wetland resource area specified in 310CMR10.02(1)(a).

- a. the work is a maintenance dredging project as provided for in the Act; or
 - b. the time for completion has been extended to a specified date more than three years, but less than five years, from the date of issuance. If this Order is intended to be valid for more than three years, the extension date and the special circumstances warranting the extended time period are set forth as a special condition in this Order.
5. This Order may be extended by the issuing authority for one or more periods of up to three years each upon application to the issuing authority at least 30 days prior to the expiration date of the Order.
 6. If this Order constitutes an Amended Order of Conditions, this Amended Order of Conditions does not exceed the issuance date of the original Final Order of Conditions.
 7. Any fill used in connection with this project shall be clean fill. Any fill shall contain no trash, refuse, rubbish, or debris, including but not limited to lumber, bricks, plaster, wire, lath, paper, cardboard, pipe, tires, ashes, refrigerators, motor vehicles, or parts of any of the foregoing.
 8. This Order is not final until all administrative appeal periods from this Order have elapsed, or if such an appeal has been taken, until all proceedings before the Department have been completed.
 9. No work shall be undertaken until the Order has become final and then has been recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property. In the case of recorded land, the Final Order shall also be noted in the Registry's Grantor Index under the name of the owner of the land upon which the proposed work is to be done. In the case of the registered land, the Final Order shall also be noted on the Land Court Certificate of Title of the owner of the land upon which the proposed work is done. The recording information shall be submitted to the Conservation Commission on the form at the end of this Order, which form must be stamped by the Registry of Deeds, prior to the commencement of work..
 10. A sign shall be displayed at the site not less than two square feet or more than three square feet in size bearing the words,

" Massachusetts Department of Environmental Protection"
[or 'MassDEP']
File Number : "301-1287"
 11. Where the Department of Environmental Protection is requested to issue a Superseding Order, the Conservation Commission shall be a party to all agency proceedings and hearings before Mass DEP.
 12. Upon completion of the work described herein, the applicant shall submit a Request for Certificate of Compliance (WPA Form 8A) to the Conservation Commission.
 13. The work shall conform to the plans and special conditions referenced in this order.
 14. Any change to the plans identified in Condition #13 above shall require the applicant to inquire of the Conservation Commission in writing whether the change is significant enough to require the filing of a new Notice of Intent.
 15. The Agent or members of the Conservation Commission and the Department of Environmental Protection shall have the right to enter and inspect the area subject to this Order at reasonable hours to evaluate compliance with the conditions stated in this Order, and may require the submittal of any data deemed necessary by the Conservation Commission or Department for that evaluation.
 16. This Order of Conditions shall apply to any successor in interest or successor in control of the property subject to this Order and to any contractor or other person performing work conditioned by this Order.
 17. Prior to the start of work, and if the project involves work adjacent to a Bordering Vegetated Wetland, the boundary of the wetland in the vicinity of the proposed work area shall be marked by wooden stakes or flagging. Once in place, the wetland boundary markers shall be maintained until a Certificate of Compliance has been issued by the Conservation Commission.
 18. All sedimentation barriers shall be maintained in good repair until all disturbed areas have been fully stabilized with vegetation or other means. At no time shall sediments be deposited in a wetland or water body. During

construction, the applicant or his/her designee shall inspect the erosion controls on a daily basis and shall remove accumulated sediments as needed. The applicant shall immediately control any erosion problems that occur at the site and shall also immediately notify the Conservation Commission, which reserves the right to require additional erosion and/or damage prevention controls it may deem necessary. Sedimentation barriers shall serve as the limit of work unless another limit of work line has been approved by this Order.

NOTICE OF STORMWATER CONTROL AND MAINTENANCE REQUIREMENTS

19. The work associated with this Order(the "Project") is (1) is not (2) subject to the Massachusetts Stormwater Standards. If the work is subject to Stormwater Standards, then the project is subject to the following conditions;
- a) All work, including site preparation, land disturbance, construction and redevelopment, shall be implemented in accordance with the construction period pollution prevention and erosion and sedimentation control plan and, if applicable, the Stormwater Pollution Prevention Plan required by the National Pollutant Discharge Elimination System Construction General Permit as required by Stormwater Standard 8. Construction period erosion, sedimentation and pollution control measures and best management practices (BMPs) shall remain in place until the site is fully stabilized.
 - b) No stormwater runoff may be discharged to the post-construction stormwater BMPs unless and until a Registered Professional Engineer provides a Certification that: *i.* all construction period BMPs have been removed or will be removed by a date certain specified in the Certification. For any construction period BMPs intended to be converted to post construction operation for stormwater attenuation, recharge, and/or treatment, the conversion is allowed by the MassDEP Stormwater Handbook BMP specifications and that the BMP has been properly cleaned or prepared for post construction operation, including removal of all construction period sediment trapped in inlet and outlet control structures; *ii.* as-built final construction BMP plans are included, signed and stamped by a Registered Professional Engineer, certifying the site is fully stabilized; *iii.* any illicit discharges to the stormwater management system have been removed, as per the requirements of Stormwater Standard 10; *iv.* all post-construction stormwater BMPs are installed in accordance with the plans (including all planting plans) approved by the issuing authority, and have been inspected to ensure that they are not damaged and that they are in proper working condition; *v.* any vegetation associated with post-construction BMPs is suitably established to withstand erosion.
 - c) The landowner is responsible for BMP maintenance until the issuing authority is notified that another party has legally assumed responsibility for BMP maintenance. Prior to requesting a Certificate of Compliance, or Partial Certificate of Compliance, the responsible party (defined in General Condition 19(e)) shall execute and submit to the issuing authority an Operation and Maintenance Compliance Statement ("O&M Statement") for the Stormwater BMPs identifying the party responsible for implementing the stormwater BMP Operation and Maintenance Plan ("O&M Plan") and certifying the following: *i.*) the O&M Plan is complete and will be implemented upon receipt of the Certificate of Compliance, and *ii.*) the future responsible parties shall be notified in writing of their ongoing legal responsibility to operate and maintain the stormwater management BMPs and implement the Stormwater Pollution Prevention Plan.
 - d) Post-construction pollution prevention and source control shall be implemented in accordance with the long-term pollution prevention plan section of the approved Stormwater Report and, if applicable, the Stormwater Pollution Prevention Plan required by the National Pollutant Discharge Elimination System Multi-Sector General Permit.
 - e) Unless and until another party accepts responsibility, the landowner, or owner of any drainage easement, assumes responsibility for maintaining each BMP. To overcome this presumption, the landowner of the property must submit to the issuing authority a legally binding agreement of record, acceptable to the issuing authority, evidencing that another entity has accepted responsibility for maintaining the BMP, and that the

City/Town:SUDBURY

proposed responsible party shall be treated as a permittee for purposes of implementing the requirements of Conditions 19(f) through 19(k) with respect to that BMP. Any failure of the proposed responsible party to implement the requirements of Conditions 19(f) through 19(k) with respect to that BMP shall be a violation of the Order of Conditions or Certificate of Compliance. In the case of stormwater BMPs that are serving more than one lot, the legally binding agreement shall also identify the lots that will be serviced by the stormwater BMPs. A plan and easement deed that grants the responsible party access to perform the required operation and maintenance must be submitted along with the legally binding agreement.

- f) The responsible party shall operate and maintain all stormwater BMPs in accordance with the design plans, the O&M Plan, and the requirements of the Massachusetts Stormwater Handbook.
- g) The responsible party shall:
 - 1. Maintain an operation and maintenance log for the last three (3) consecutive calendar years of inspections, repairs, maintenance and/or replacement of the stormwater management system or any part thereof, and disposal (for disposal the log shall indicate the type of material and the disposal location);
 - 2. Make the maintenance log available to MassDEP and the Conservation Commission ("Commission") upon request; and
 - 3. Allow members and agents of the MassDEP and the Commission to enter and inspect the site to evaluate and ensure that the responsible party is in compliance with the requirements for each BMP established in the O&M Plan approved by the issuing authority.
- h) All sediment or other contaminants removed from stormwater BMPs shall be disposed of in accordance with all applicable federal, state, and local laws and regulations.
- i) Illicit discharges to the stormwater management system as defined in 310 CMR 10.04 are prohibited.
- j) The stormwater management system approved in the Order of Conditions shall not be changed without the prior written approval of the issuing authority.
- k) Areas designated as qualifying pervious areas for the purpose of the Low Impact Site Design Credit (as defined in the MassDEP Stormwater Handbook, Volume 3, Chapter 1, Low Impact Development Site Design Credits) shall not be altered without the prior written approval of the issuing authority.
- l) Access for maintenance, repair, and/or replacement of BMPs shall not be withheld. Any fencing constructed around stormwater BMPs shall include access gates and shall be at least six inches above grade to allow for wildlife passage.

F. Appeals

The applicant, the owner, any person aggrieved by this Order, any owner of land abutting the land subject to this Order, or any ten residents of the city or town in which such land is located, are hereby notified of their right to request the appropriate MassDEP Regional Office to issue a Superseding Order of Conditions. The request must be made by certified mail or hand delivery to the Department, with the appropriate filing fee and a completed Request for Departmental Action Fee Transmittal Form, as provided in 310 CMR 10.03(7) within ten business days from the date of issuance of this Order. A copy of the request shall at the same time be sent by certified mail or hand delivery to the Conservation Commission and to the applicant, if he/she is not the appellant.

Any appellants seeking to appeal the Department's Superseding Order associated with this appeal will be required to demonstrate prior participation in the review of this project. Previous participation in the permit proceeding means the submission of written information to the Conservation Commission prior to the close of the public hearing, requesting a Superseding Order, or providing written information to the Department prior to issuance of a Superseding Order.

The request shall state clearly and concisely the objections to the Order which is being appealed and how the Order does not contribute to the protection of the interests identified in the Massachusetts Wetlands Protection Act (M.G.L. c. 131, § 40), and is inconsistent with the wetlands regulations (310 CMR 10.00). To the extent that the Order is based on a municipal ordinance or bylaw, and not on the Massachusetts Wetlands Protection Act or regulations, the Department has no appellate jurisdiction.

(M.G.L. c. 131, § 40), and is inconsistent with the wetlands regulations (310 CMR 10.00). To the extent that the Order is based on a municipal ordinance or bylaw, and not on the Massachusetts Wetlands Protection Act or regulations, the Department has no appellate jurisdiction.

G. Recording Information

This Order of Conditions must be recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property. In the case of recorded land, the Final Order shall also be noted in the Registry's Grantor Index under the name of the owner of the land subject to the Order. In the case of registered land, this Order shall also be noted on the Land Court Certificate of Title of the owner of the land subject to the Order of Conditions. The recording information on this page shall be submitted to the Conservation Commission listed below.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

DEP FILE #301-1287

Address: MBTA ROW and 183 Boston Post Road

Applicants: Eversource and Department of Conservation and Recreation

Issued: February 4, 2021

The Sudbury Conservation Commission hereby finds that the following conditions are necessary, in accordance with the Performance Standards set forth in the Wetlands Protection Act, its corresponding regulations, and the Sudbury Wetlands Administration Bylaw to protect those interests checked above. To aid in implementation, compliance, and enforcement the specific conditions are divided into several broad categories for reference.

The Sudbury Conservation Commission orders that all work shall be performed in accordance with said conditions and with the Notice of Intent referenced. To the extent that the following conditions modify or differ from the plans, specifications or other proposals submitted with the Notice of Intent, the conditions shall control.

This Decision of the Sudbury Conservation Commission under the Wetlands Protection Act may be appealed to the MA Department of Environmental Protection, Northeast Region.

This Decision of the Sudbury Conservation Commission under the Sudbury Wetlands Administrative Bylaw may be appealed to the Superior Court in accordance with G.L. Ch. 249 §4.

Findings:

The Notice of Intent was filed for the installation of a new 115kV underground electrical transmission line and the construction of a portion of the Mass Central Rail Trail, from the existing Sudbury Substation to the Hudson town line, along the inactive Massachusetts Bay Transportation Authority Right-of-Way, in Sudbury, MA, under the State Wetlands Protection Act and the Sudbury Wetlands Administrative Bylaw.

The Commission finds that portions of the project, as designed and mitigated for, qualifies as a limited project under 310CMR 10.53(3)(d) for Phase I and under 310CMR 10.53(6) for Phase II.

The Commission finds that the stormwater management has been designed in accordance with 310CMR 10.05 (m), as the end use is a non-motorized multi-use trail and Eversource inspection vehicles only need to access the transmission line facility once every three years.

The Commission finds that alternative routes with fewer adverse environmental impacts may exist. However, given the Energy Facilities Siting Board (EFSB) Decision (EFSB I7-02/D.P.U. 17/82/17/83) the Commission was not permitted to evaluate alternative routes under the Wetlands Protection Act. Since this EFSB Decision is currently under Appeal by the Town of Sudbury, if there is a change in the route for the Eversource transmission line as a result of the appeal process, the Applicants shall return to the Commission for further review of any changes to either phase of the project and a determination of the need for potential modifications of this Order.

All wetland resource areas within the Project Locus were reviewed and approved as part of the Abbreviated Notice of Resource Area Delineation (ANRAD) process with the Sudbury Conservation Commission in 2018 through the Order of Resource Area Delineation (ORAD) issued on August 27, 2018. The ORAD included Bordering Vegetated Wetland (BVW), Bank, Land Under Water Bodies and Waterways (LUWW), Bordering Land Subject to Flooding (BLSF), Riverfront Area (RA), and vernal pools, in

ORDER OF CONDITIONS State Wetlands Protection Act & Sudbury Wetlands Administration Bylaw

accordance with Wetlands Protection Act and Sudbury Wetland Bylaw definitions. During the ANRAD review process, the BLSF boundary was established in the field by ground survey by using the 100-year floodplain (i.e., BLSF) base flood elevation. Under the Act, Hop Brook and Dudley Brook are considered perennial and have an associated 200-foot Riverfront Areas. Under the Sudbury Bylaw, all remaining streams on the Project Locus are defined to be perennial and their associated 200-foot Riverfront Area are jurisdictional under the Bylaw Regulations only. In addition, the Sudbury Bylaw regulates activities within the Adjacent Upland Resource Area (AURA), which generally consists of land within 100 feet of wetland resource areas and land within 200 feet from the top of bank of perennial streams and rivers. The AURA for vernal pools, or Vernal Pool Habitat, extends 100 feet from the mean annual high-water line defining the depression. There are also isolated wetlands on the Project Locus that are subject to local and federal jurisdiction. Portions of the project site are also located within Estimated and Priority Habitat for Rare Species, within Coldwater Fishery Resources, and within a Zone II Wellhead Protection Zone. There are 13 wetland areas that would qualify as vernal pools under the state regulations (one is currently certified and 12 contain biological criteria for certification). There are an additional seven wetland areas that are presumed to be vernal pools under the local bylaw only.

The project and conditions and requirements set forth in this Order of Conditions are specific for each phase of construction: Phase I being under the responsibility of Eversource for the installation of the underground transmission line, all major earthwork, installation of the stormwater management system, construction of a 14-foot gravel road, construction/renovation of Bridges 128 and 127, site restoration, and implementation of all mitigation; and Phase II being under the responsibility of the Department of Conservation and Recreation for the paving of the Mass Central Rail Trail, installation of safety plantings and other trail amenities, and long-term maintenance of the corridor, including culverts and drainage structures.

The project proposes disturbance to four acres of land within estimated and priority habitat for four species: Eastern Box Turtle, Eastern Whip-poor-will, Gerhard's Underwing Moth, and Coastal Swamp Metarranthus Moth. As such, the Natural Heritage and Endangered Species Program has reviewed the project and imposed conditions to prevent the "take" of state-listed species in determination letters to the Applicants dated October 19, 2018, and May 17, 2019. These conditions are incorporated herewith.

The Commission finds that this project is designed to meet the performance standards of the Wetlands Protection Act and the Sudbury Wetlands Administration Bylaw. Mitigation under the Bylaw for the proposed project actions within the locally regulated Adjacent Upland Resource Area, will be achieved by installation of restoration and mitigation plantings within the limits of work (total of 0.9 acres), debris removal outside the limit of work, creation of strategic brush piles for wildlife habitat, installation of an osprey platform at the existing substation off Boston Post Road, and implementation of a 3.3-acre invasive species management program within the MBTA ROW but outside the limits of work proposed for the Project. The Commission finds the Project, as conditioned in this Order is sufficient to meet the requirements of the state and local wetland regulations.

Final Record Documents:

1. Sudbury-Hudson Transmission Reliability and Mass Central Rail Trail Project Notice of Intent dated March 2020.
2. Sudbury-Hudson Transmission Reliability and Mass Central Rail Trail Project Wildlife Habitat Evaluation, dated March 2020, with supplemental Wildlife Habitat Evaluation Summary dated October 15, 2020.
3. Eversource Sudbury Notice of Intent Plans March 5, 2020, as revised through January 2021
4. Mass Central Rail Trail Notice of Intent Plan March 5, 2020, as revised through January 7, 2021
5. Draft Eversource Stormwater Pollution Prevention Plan dated May 2020
6. Draft DCR Stormwater Pollution Prevention Plan dated May 2020
7. Sudbury -- Soil and Groundwater Analytical Memo dated June 12, 2020

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

8. Time of Year Restrictions Figures June 24, 2020
9. Draft Turtle Protection Plan (undated)
10. Draft Corridor Management Plan dated August 7, 2020
11. MCRT Operation and Maintenance June 2020
12. Long Term Pollution Prevention Plan June 2020

All work must conform to the plans referenced, the Notice of Intent, and this Order. In case of conflict, the requirements in this Order shall prevail. By accepting this Order, the Applicants confirms submission all relevant documentation, reports, and information available to Applicants, in the application submitted and that this information is true and valid to the best of the Applicants' knowledge.

SPECIAL CONDITIONS:

PART I: GENERAL PROJECT CONDITIONS:

For Phase I and Phase II

These conditions apply to all projects permitted by the Sudbury Conservation Commission. They shall remain in force until issuance of a Certificate of Compliance by the Commission. A violation of any of these conditions shall constitute reason for enforcement action by the issuing authority:

- a. Failure to comply with all conditions stated herein, and with all related statutes and other regulatory measures, shall be deemed cause to revoke or modify this Order.
- b. This Order does not grant any property rights or any exclusive privileges; it does not authorize any injury to private property or invasion of private rights.
- c. This Order does not relieve the permittee or any other person of the necessity of complying with all other applicable federal, state, or local statutes, ordinances, by-laws, or regulations.
- d. The work authorized hereunder, except for that work which has specific timeframes indicated, shall be completed within three years from the date of issuance of this Order unless either of the following apply:
 - 1) the work is a maintenance dredging project as provided for in the Act; or
 - 2) the time for completion has been extended to a specified date more than three years, but less than five years, from the date of issuance and both that date and the special circumstances warranting the extended time period are set forth in this Order.
- e. This Order may be extended by the issuing authority for one or more periods of up to one year upon application to the issuing authority at least thirty days prior to the expiration date of this Order. In determining whether or not to grant an Extension Permit, the Sudbury Conservation Commission shall review and apply the criteria for extensions of time as set forth in the Regulations.
- f. No work shall be undertaken until all administrative appeal periods from the date of issuance of this Order have elapsed or, if such an appeal has been filed, until all proceedings have been completed.
- g. **No work shall be undertaken until the Final Order has been recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property.** In the case of recorded land, the Final Order shall also be noted in the Registry's Grantor index under the name of the owner of the land upon which the proposed

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- work is to be done. In the case of registered land, the final Order shall also be noted on the Land Court Certificate of title of the owner of the land upon which the proposed work is to be done.
- h. The recording information shall be submitted to the Commission on the form at the end of the Order, or other form acceptable to the Commission, within thirty days of the issuance of this Order or prior to the start of construction, whichever is sooner.
 - i. Where the Department of Environmental Protection is requested to make a determination and to issue a Superseding Order, the Sudbury Conservation Commission shall be party to all agency proceedings and hearings before the Department.
 - j. The work shall conform to the plans and special conditions incorporated in this document.
 - k. The project engineer, contractors, and all subcontractors must be informed of the conditions in this Order.
 - l. The Applicants are held responsible for compliance with this Order of Conditions. The Sudbury Conservation Commission shall be notified, in writing, within forty-eight hours of any transfers of title on this property.
 - m. This Order of Conditions shall apply to any successor in control, or successor in interest, of the property described in the Notice of Intent and accompanying plans.
 - n. Members and agents of the Sudbury Conservation Commission shall have the right to enter and inspect the property to evaluate compliance with the conditions stated in this Order. When possible prior to project site access, reasonable advance notice will be made. Compliance with health and safety protocols for the project site will be followed.
 - o. Prior to commencement of work, the Applicants shall provide the executed Memorandum of Understanding between Eversource and the Department of Conservation and Recreation and the agreements between the Massachusetts Bay Transportation Authority and the Applicants, to ensure the obligations of the project are fulfilled.
 - p. All Time-of-Year restrictions and sweeps required by the Natural Heritage and Endangered Species Program shall be followed. Time-of-Year restrictions for work within 450 feet of all vernal pools shall be March 1 through June 1. Between March 1 and June 1, the Applicants' Environmental Monitor shall conduct sweeps prior to vehicles traveling down the project site within vernal pool buffers (including certified, certifiable, and presumed vernal pools). Between April 1 and October 31, the Applicants' environmental monitor shall conduct turtle sweeps prior to initiation of work each day, or prior to vehicles travelling through the Box Turtle Protection Area.
 - q. The baseflow and baseline water quality of all Cold Water Fisheries shall be established pre-construction. Baseline monitoring shall be accomplished to ensure there is no degradation of water quality over time from this project. The Applicants shall submit a detailed plan, subject to the Commission's approval, to specify water quality monitoring parameters, including times, methodology, analyses and reporting. Post construction, monitoring may be required and may continue in the Certificate of Compliance based on monitoring result up to that time.
 - r. Prior to commencement of each Phase, the Conservation Commission or its Agent shall map the corridor for the presence of invasive species within and adjacent to the limit of work. The

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

information generated from this mapping shall be used to identify any new invasive species populations or significant expansions of invasive species that are a direct result from the Project. Mapping shall be used by the Applicants to implement a program to control invasive species populations to ensure the functions of wetland resource areas in the limits of work that have been restored with native vegetation are not subject to degradation by expansion of invasive species. If the Commission or its agent determines that the Project resulted in new or significantly expanded invasive populations, the Applicants shall implement a program to control these populations to ensure the project does not result in additional degradation of wetland resource areas.

- s. The site shall be accessed predominantly from public ways. If alternative access points are needed, the Applicants will first direct the contractor to use previously disturbed areas outside wetlands jurisdiction. If alternative access is found to be needed within wetlands jurisdiction, access may be permitted within previously disturbed areas that will not require additional vegetation removal or additional impacts to wetland resource areas, with approval from the Commission's representative. No equipment turnaround locations outside the limit of work are permitted.
- t. Laydown areas shall be located predominantly outside resource areas subject to the Commission's jurisdiction. If any construction laydown area is proposed outside of the currently proposed work limits and in an area subject to the Commission's jurisdiction, an erosion control plan shall be submitted in advance to the Commission's representative for review and approval.
- u. Any fill used in connection with this project shall be clean fill, containing no trash, refuse, rubbish or debris, including but not limited to lumber, bricks, plaster, wire, lath, paper, cardboard, pipe, tires, ashes, refrigerators, motor vehicles or parts of any of the foregoing.
- v. No equipment cleaning or refueling may occur within a wetland or upland resource area, with the exception of the crane. For cranes positioned within wetland jurisdiction for more than one day, the Applicant shall provide secondary containment to contain any leaks that may emanate from equipment.
- w. All equipment, including timber mats, shall be cleaned and certified invasive species free, prior to entering the site. Such certification shall be provided to the Commission prior to commencement of mobilization into the site and when remobilized within the project site.
- x. Heavy mechanical equipment (exerting a ground pressure of 3 psi or greater) will not be allowed in areas where final grading, aeration, and vegetation restoration/mitigation have been completed, including restored and replicated wetland resource areas. Following completion of restoration areas, erosion controls or other method of demarcation shall be implemented to prevent further alteration of restoration areas.
- y. All areas of disturbance shall be monitored for invasive species, which shall be manually removed if encountered, for the duration of the project and until such time as a minimum of 90% native vegetative cover is established.
- z. The wetland replication area and land adjacent thereto shall be monitored for invasive species, and manually removed when found, for the life of the Order. The wetland replication area shall be considered substantially restored when it contains a minimum of 90% cover with native species. Replications that do not properly restore the functions and values of altered resource areas will not be deemed acceptable no matter how closely they adhere to approved engineered plans.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- aa. There shall be no drafting of water from wetland resource areas for dust control, for watering plantings, or any other activity.
- bb. Every effort shall be made to reduce soil compaction. Compacted soils shall be aerated prior to being revegetated.
- cc. Upon completion of the work associated within each phase, the Applicants shall forthwith request in writing that a Certificate of Compliance be issued stating that the work has been satisfactorily completed and clearly documenting any deviations or deficiencies from the approved plans.

CONDITIONS RELATED TO ENDANGERED SPECIES MANAGEMENT
For Phase I and Phase II

- a. Prior to implementation, the Final Corridor Management Plan for Massachusetts Central Rail Trail and Sudbury-Hudson Transmission Reliability Project that will be provided to the Division of the Fisheries and Wildlife ("the Division") shall be provided to the Commission for review and approval and must be implemented as approved. If changes to said Plan are proposed, the revised Plan to be submitted to the Division shall be submitted to the Commission for review and approval. Vegetated areas over the duct bank and water quality swales (within wetland jurisdictional areas) shall not be mown between April 1 and November 1, unless needed for safety purposes, without prior approval of the Conservation Commission.
- b. Prior to the start of work, the Applicants must submit to the Division and the Commission, for review and approval, a signage plan for the shoulder and duct bank mowing areas, which must describe sensitive dates for the Eastern Box Turtle.
- c. Measures shall be implemented to protect Eastern Box Turtles during construction. Prior to the start of work, a final Eastern Box Turtle Protection Plan must be submitted to the Division and Commission for review and approval, and must be implemented as approved. Said Plan must include detailed turtle protection measures to be implemented by the Applicants. If changes to said Plan are proposed, a revised Plan must be submitted to the Division for review and prior written approval. The Commission shall be provided a copy of the final Eastern Box Turtle Protection Plan along with any modifications thereto.
- d. Prior to the start of work, the Applicants must submit to the Division and Commission, for review and approval, a native seed mix proposed for any planting or loam and seed activities.
- e. Unless otherwise approved by the Division and Commission, proposed wood railings must leave, at a minimum, a 10-inch space beneath the lowest rail for wildlife passage.
- f. Unless otherwise approved by the Division, construction activities within Priority Habitat must not occur during the Eastern Whip-poor-will breeding season (May 1 – August 1), as proposed. The Applicants shall endeavor to refrain from construction activities within Priority Habitat from April 15 to August 1.
- g. Within thirty (30) days of the completion of work, or as otherwise approved by the Division, the Applicants shall submit a compliance report to the Division and Commission documenting the completion of the project and compliance with all conditions herein, including a summary of construction timelines and photographs.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- h. Work within 450 feet of vernal pools is prohibited between March 1 and June 1. The Applicants shall have a qualified Environmental Monitor on site to monitor vehicular traffic during this Time of Year restriction, should a suitable alternative route not be available.

PART II: CONDITIONS SPECIFIC TO

Phase I: Eversource Underground Transmission Line

- a. An independent Environmental Monitor, hired by the Conservation Commission and paid for by the Applicant, shall be provided to oversee the following activities:
1. Review the erosion control barrier following installation but prior to any land disturbance and each year prior to vernal pool species migration. Conduct spot inspections of vernal pools during construction and/or review reports provided by the Applicant's environmental monitor to ensure no negative impact to vernal pools during construction.
 2. Be on site during initial tree removal and invasive species clearing activities, within the limit of work.
 3. Review and ensure appropriate reporting of all activities associated with construction scheduling, erosion control monitoring, compliance with the project's SWPPP, and environmental monitoring activities including ensuring adherence to time of year restrictions.
 4. Be on site during bridge platform installation and spot inspections during bridge construction.
 5. Be notified of all dewatering activities and be on site during dewatering in sensitive locations, i.e. whenever excavation is proposed within 50 feet of a wetland, or when extensive dewatering will be needed. Specific oversight locations will be determined with the contractor, prior to commencement of work.
 6. Review restoration/mitigation areas including being on site during the construction of the wetland replication area.
 7. Be on site to oversee excavation/construction activities over culverts and drainage structures.
 8. Be available to respond to emergency situations, should they arise.
- b. At least four weeks prior to any land disturbance, an Invasive Species Management Plan shall be developed and submitted to the Conservation Commission for review and approval. Said Management Plan shall involve removal of invasive species and revegetation with native species for a period of five (5) years from a minimum of 3.3 acres of land within the MBTA Right-of-Way, but outside the proposed limit of work, and shall focus efforts on improving wildlife habitat in areas identified through the Wildlife Habitat Evaluation and peer review thereof as being most impacted from proposed work. Following implementation, the Invasive Species Management Area shall be managed in accordance with Perpetual Condition b. contained within this Order.
- c. At least two weeks prior to any land disturbance, a Soil and Groundwater Management Plan (SGMP) prepared in conjunction with the selected contractor shall be submitted to the Conservation Commission for review and comment. The Applicant shall give due consideration to address comments received from the Commission that are needed to protect wetland resource areas functions and values. The SGMP will develop means and methods to manage soils and groundwater encountered during project construction activities including soil excavation, groundwater dewatering, and railroad tie and track removal. If conditions are encountered that suggest soil may require additional evaluation or special handling based on visual, olfactory, or field screening results, excavation activities in that area will immediately be stopped and Eversource, their Licensed Site Professional, and the Conservation Commission will be contacted immediately to evaluate the observations and recommend requirements for proper handling. The Commission shall be copied on all related correspondence.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- d. At least two weeks prior to any land disturbance, a structural engineer and wildlife biologist shall inspect the culverts and drainage structures within the Project Site to determine whether they are structurally sound to (a) function hydrologically, (b) withstand the planned construction activities, and (c) evaluate their wildlife migration functions, and shall provide a report of the finding to the Commission. If any culverts do not meet these requirements or is damaged during construction, it shall be repaired or replaced with a culvert that meets current MA Stream Crossing Standards to the maximum extent practicable, as determined by the Commission or its Agent. Any recommended improvements to these structures, not included in this Notice, shall be required to submit a separate Notice of Intent and/or an Amendment to this Order to the Commission for further evaluation. Following completion of Phase I and Phase II a similar structural evaluation shall be conducted to confirm work did not affect culverts and drainage structures.
- e. At least three weeks prior to any land disturbance, a Project Compliance Manual that includes the requirements from compliance from the various permits for the Project, including this Order and Conditions herein, shall be submitted to the Conservation Commission for review to confirm that the requirements of this Order are accurately stated.
- f. At least two weeks prior to the start of Phase I, the Applicant shall provide a construction schedule detailing construction activities and sequencing. This shall be amended as necessary throughout construction. Weekly reports shall be submitted to the Commission that details work completed each week and anticipated work for the coming week, including identifying when work is located in areas of potential elevated levels of soil and groundwater contamination. These reports shall include anticipated dewatering activities so that oversight can be provided by the Commission or its Agent, if found necessary, and include the location of active stockpiles with confirmation that appropriate erosion control measures are being implemented.
- g. At least two weeks prior to the start of Phase I, the Applicant shall provide the final Stormwater Pollution Prevention Plan (SWPPP) to the Commission for review and approval. Any use of permanent infiltration BMPs for temporary construction-related stormwater management shall be specifically addressed in the SWPPP and protocol for removal of fine silt and sediment from these BMPs shall be conducted at the completion of Phase I. If a response is not received by the Conservation Commission within 10 days of receipt, the SWPPP shall be deemed approved. Any changes made to the SWPPP during the course of the project shall be submitted and approved by the Commission prior to implementation.
- h. Prior to land disturbance, the Applicant shall provide a signed illicit discharge statement.
- i. The Applicant shall ensure there is a qualified Environmental Monitor(s) on site at all times overseeing work that is subject to this Order. The Environmental Monitor(s) shall send weekly erosion control inspection reports and reports following any storm event of ½ inch of rain or greater, to the Conservation Commission.
- j. The Limit of Work/erosion control location shall be survey located in the field and certified by a Mass Registered Professional Land Surveyor, installed under the oversight of the Applicant's Environmental Monitor, and reviewed by the Commission and/or its Agent prior to commencement of any site work.
- k. Prior to any site disturbance, with the exception of the installation of the erosion control barrier, the Applicant shall schedule a pre-construction site visit with the Conservation Coordinator as least one week prior to commencement of work. At a minimum, those in attendance at this site visit should include the Applicant, construction supervisor, and environmental monitors involved in the project.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- l. The Applicant's wildlife biologist or other qualified individual shall document the location of all important habitat features that will be removed (such as brush piles, snags, overhanging trees, logs within or near the water, large woody debris, etc.) to quantify the number of features removed and provide confirmation that work did not result in the loss of important wildlife habitat features. Brush, large woody debris, and logs shall be replaced within or near the water, generally in the location of where they were removed. Reports shall be provided to the Conservation Commission at least every six (6) months, for the life of the Order, documenting wildlife habitat removal and restoration efforts implemented, including monitoring of vernal pools.
- m. During initial vegetation removal, trunks shall be retained but cut as close to the ground as possible. Following installation and approval of erosion controls, stumps and roots may be grubbed, if necessary. Stumping and grubbing activities shall not adversely affect woody vegetation or soils outside the erosion control barrier. Logs, stumps, and other large woody debris in and/or overhanging the resource areas shall be left undisturbed to maximize food source and habitat.
- n. Tree/limb clearing shall be minimized to only that which is required to access the project site with equipment and to conduct the approved work. Equipment shall be chosen which minimizes required clearing to the maximum extent practicable. The Applicant shall retain as many limbs overhanging the limit of work as possible. Prior to tree felling, the Applicant shall walk the corridor with the Commission or its Agent to determine the extent of canopy that can be retained.
- o. Vegetation removed from the site shall be chipped directly into a truck and removed from the project site. Woody material for reuse on site for the creation of wildlife habitat features shall be identified and retained.
- p. The contractor shall provide detailed plans of the crane mat location and installation a minimum of one week prior to installation. All work and impacts associated with installation, removal, and stabilization of the crane areas shall be conducted in strict compliance with the Project Plans and Details and shall be reviewed and approved by the Commission and/or its Agent prior to installation and shall be installed under the supervision of the independent Environmental Monitor.
- q. Dewatering activities shall be located as far as possible from wetland resource areas and shall be prohibited from discharging to Bordering Vegetated Wetlands, Isolated Vegetated Wetlands, Land Under Water Bodies and Waterways, or within the inner Riverfront Area. Dewatering may only occur in other upland resource areas provided adequate control measures are implemented and locations are identified by the contractor and review and approved by the Commission and/or its agent prior to implementation.
- r. The Conservation Commission and their representative shall be notified at least three (3) business days in advance of the removal of the crane mats at Bridge 127.
- s. Other than the grading of minor amounts of soil within the immediate vicinity of the Hudson/Sudbury town boundary, no soil excavated from Hudson may be used in Sudbury. The Sudbury Conservation Commission shall be copied if the Hudson Conservation Commission is notified of any remedial activities or changes to the work plans required due to the potential presence of PFAS in jurisdictional areas in Hudson.
- t. The Applicant shall ensure that any reuse of on-site soils shall not result in the degradation of soil or groundwater in the area.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- u. Stockpiling of materials within the ROW shall be limited in size and duration (one-week maximum) and shall be located as far from sensitive areas as possible. Soil stockpiles shall be covered with tarp or plastic sheet and surrounded by erosion controls. Excess soil not reused within the Project site shall be stockpiled outside the ROW and wetland jurisdiction. Weekly reports prepared by the Environmental Monitors throughout construction will identify the locations of active stockpiles and will confirm that the appropriate erosion control measures are being implemented
- v. Additional test pits/borings at the location of each proposed "area of increase infiltration" shall be conducted during construction to verify soil conditions, infiltration rates, and groundwater levels, and provided to the Conservation Commission for review. At a minimum, soil tests shall be conducted in the vicinity of Stations 502+00, 511+00, 570+00, and 579+00. A report of the findings, comparison with expectations, and a statement on the appropriateness of the design shall be provided to the Conservation Commission for review. If findings are not consistent with the assumptions made for the stormwater management design, revisions to the design and approval of modifications to the Plan may be required.
- w. Infiltration basins shall not be used as sediment basins during construction. Additional erosion controls shall be installed to protect infiltration basins from sedimentation until contributing areas are stable.
- x. The Conservation Commission and/or their agent shall inspect all permanent stormwater infiltration BMPs for acceptance prior to construction demobilization to a new location within the ROW.
- y. Mitigation, and restoration efforts within the limit of work, shall be implemented during the first growing season following commencement of work. Written reports shall be submitted by December 1 of each year the Order is active that details mitigation efforts that have been implemented, success of implementation, and anticipated activities the following growing season. Mitigation and Restoration areas shall be deemed substantially in compliance when there is a minimum of 90% cover with native species and free of invasive species.
- z. Areas adjacent to vernal pools shall be revegetated immediately following the completion of all necessary grading in these area, and the revegetation in these areas shall be monitored so erosion controls can be removed as soon as field conditions allow. Mitigation plantings around the vernal pool margins shall be monitored for successful establishment for a minimum of two growing seasons and annual reports documenting establishment shall be submitted to the Commission.
- aa. Prior to planting, the Applicant's Environmental Monitor shall inspect, approve, and provide photo documentation of all plant stock. Any species substitutions must be provided to the Commission, in writing, including a justification for substitution, for review and approval prior to implementation.
- bb. The wetland replication area shall be constructed during vegetation removal in the vicinity of the replication area and prior to the construction of structures in that vicinity.
- cc. All plantings must survive for at least two growing seasons or be replaced at the expense of the Applicant.
- dd. Loam borrow brought to the site to stabilize the work area after completing Phase 1 shall be sourced appropriately. Use of impacted soils (from contamination or invasive seed) shall be prohibited.
- ee. No spoils of construction, construction material, or equipment shall be stored, placed or operated in the wetland resource areas or the wetland buffer zone except as may be permitted by this Order for

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

work in the riverfront and upland resource area. These activities may not occur within the bordering vegetated wetland or within bordering land subject to flooding.

- ff. In any part of the Project work limits within 200 feet of a road crossing where the MBTA ROW crosses a Zone II for the Sudbury Water District supply wells, if a clay layer is encountered in the excavation for the transmission line and the excavation will extend below the bottom of the clay layer, the clay shall be stockpiled and reused to backfill and line the excavation before the transmission line duct bank is placed in that location.
- gg. There shall be no disturbance beyond the limits of activities permitted as part of this Order.
- hh. Every effort shall be made to restore disturbed area with a similar soil composition to that which is was removed.
- ii. No deicing products shall be used within the project site. Snow may be stockpiled within the limit of work only or shall be removed from the site to an appropriate facility outside wetlands resource areas.
- jj. Should Phase II not commence within three years of completion of Phase I, the Applicant shall file an Amendment to bring the stormwater management into full compliance with the Town of Sudbury Stormwater Regulations.
- kk. All wildlife habitat replication and restoration shall be completed during the first growing season of Phase I to avoid a significant adverse project/site-specific impact or an adverse cumulative impact on wildlife for more than two growing seasons. Should Phase II not commence within two years of completion of Phase I, erosion controls or other methods of demarcation shall be implemented to prevent further alteration of restored areas. No important wildlife habitat features restored during Phase I shall be removed during Phase II.

PART II CONDITIONS SPECIFIC TO
Phase II: DCR Mass Central Rail Trail

- a. Prior to commencement of Phase II, erosion controls shall be inspected. Erosion controls shall be removed from all areas that have stabilized from Phase I and will not be re-disturbed as part of Phase II. All degraded erosion controls shall be replaced. Areas requiring re-installation of erosion controls for Phase II shall be installed at the limit of work for Phase II.
- b. At least two weeks prior to the start of Phase II, the Applicant shall provide a construction schedule detailing construction activities and sequencing. This shall be amended as necessary throughout construction. Weekly reports shall be submitted to the Commission that details work completed each week and anticipated work for the coming week.
- c. At least two weeks prior to the start of Phase II, the Applicant shall provide the final Stormwater Pollution Prevention Plan (SWPPP) to the Commission for review and approval. Any changes made to the SWPPP during the course of the project shall be submitted and approved by the Commission prior to implementation. If a response is not received by the Conservation Commission within 10 days of receipt, the SWPPP shall be deemed approved.
- d. The Applicant shall ensure there is a qualified Environmental Monitor(s) on site at all times overseeing work that is subject to this Order. The Environmental Monitor(s) shall send weekly erosion control reports and reports following any storm event of ½ inch of rain or greater, to the Conservation Commission.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- e. The Phase II limit of work/erosion control location shall be located in the field with survey grade equipment that produces sub-foot accuracy installed under the oversight of the Applicant's Environmental Monitor, and reviewed by the Commission and/or its Agent prior to commencement of any site work.
- f. Prior to any site disturbance, with the exception of the installation of the erosion control barrier, the Applicant shall schedule a pre-construction site visit with the Conservation Coordinator as least one week prior to commencement of work. At a minimum, those in attendance at this site visit should include the Applicant, construction supervisor, and environmental monitors involved in the project.
- g. There shall be no disturbance beyond the limits of activities permitted as part of this Order.
- h. Other than road crossings and pullouts, the paved multi-use trail shall not exceed ten (10) feet in width. Any pavement that exceed 10 feet in width shall be required to be removed.
- i. Stockpiling of materials shall be within the Phase II limit of work and shall be located as far from sensitive areas as possible.
- j. No spoils of construction, construction material, or equipment shall be stored, placed or operated in the wetland resource areas or the wetland buffer zone except as may be permitted by this Order for work in the riverfront and upland resource area. These activities may not occur within the bordering vegetated wetland or within bordering land subject to flooding.
- k. The corridor shall be maintained in compliance with the MassCentral Rail Trail (MCRT) – Wayside Section Stormwater Management System Operation and Maintenance Plan (O&M) and the Long Term Pollution Prevention Plan.
- l. Japanese knotweed shall be managed within the limit of work. Chemical treatment, via spot treatment, may be permitted as a last measure to manage knotweed. Herbicide use shall be prohibited within any certified, certifiable, or presumed vernal pool, vegetated wetlands or waterways.
- m. DCR shall notify the Commission in advance if herbicides are to be used for vegetation control within jurisdictional areas, indicating the target control species, the type(s) of herbicide to be used, the proposed application rate, and the on-going maintenance plan for the targeted area for review and approval. This Condition is ongoing and does not expire with the expiration of the Order of Conditions or the issuance of a Certificate of Compliance.

PART III: EROSION, SEDIMENTATION, STABILIZATION CONDITIONS
For Phase I and Phase II

- a. Erosion control shall be installed per the approved plan and maintained as necessary to prevent erosion and sedimentation from entering the resource areas. It is the Applicants' responsibility to take appropriate measures to control sedimentation into the wetland resource areas.
- b. Perimeter erosion controls shall be installed along the down gradient side of disturbed areas where topography is directed towards other portions of the existing/proposed trail work area.
- c. Stabilization of slopes shall be accomplished as soon as possible. Biodegradable jute netting shall be properly anchored in place, secured with non-chemically treated biodegradable materials. Should non-biodegradable fasteners be needed, with prior approval by the Commission and/or its agent, the

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

Applicants may use non-biodegradable fasteners with the condition that the Applicants shall provide confirmation that all fasteners have been removed once the area is deemed fully stabilized by the Commission and/or its representative.

- d. Appropriate netting shall be installed under the bridge 128 during bridge work to prevent debris from entering the stream. The Applicants shall contact the Conservation Office once installed for review prior to commencement of bridge work.
- e. Following Land Under Water Restoration, erosion controls shall be removed once fully stabilized and the Conservation Commission or its representative has confirmed stabilization, to protect the long-term water quality of the adjacent wetland waterways.
- f. During Phase I, Eversource shall be responsible for installing and maintaining erosion controls within the project site. Following completion of Phase I, Eversource shall continue to maintain erosion controls until DCR commences Phase II, provided that Eversource shall remove erosion controls from areas stabilized at the completion of Phase I, as confirmed by the Commission or its agent. Every effort shall be made during Phase I to stabilize areas within vernal pool habitat immediately following final grade.
- g. During Phase II, DCR shall be responsible for installing and maintaining erosion controls on the project site. Following completion of Phase II and inspection by the Commission or its Agent, DCR shall be responsible to remove all erosion control barriers.
- h. Should the time between Phase I and Phase II exceed one year, the site shall be assessed every six months, in the presence of the Commission or its Agent, to determine if erosion controls containing areas that are stable which will not be destabilized during Phase II, can be removed.

PART IV: PLAN MODIFICATIONS:

- a. Any changes during construction due to soil types found or other conditions discovered during construction shall require immediate notification of the Conservation Commission for a determination if the changes require revisions to this Order or the filing of a new Notice of Intent. Any modifications or revisions to the plans referenced, or any new plans, must be submitted to the Commission for review and a determination as to whether a new Notice of Intent is required. If this procedure is not followed, this Order may not be amended. No additional work not specifically allowed by this Order shall be accomplished on the site without the approval of the Sudbury Conservation Commission and the appropriate new filings or amendment requests are approved. Amendment procedures as described in the Wetlands Protection Act, the regulations, and the Department of Environmental Protection's Wetlands Program Policies shall be followed.
- b. No additional new construction or disturbance of a wetland resource area, as defined in the Wetlands Protection Act and its regulations, or within the 100' wetland resource area buffer zone, not covered by this Order of Conditions, shall be permitted on this site until a determination has been made by the Commission as to whether a new Notice of Intent is required, and the new work or disturbance is incorporated into a new or amended Order of Conditions. An adequate stockpile of unused erosion controls shall be available at or near the site.
- c. Should the Sudbury Conservation Commission become aware of work on site being accomplished that was not approved as part of the Order of Conditions or subsequent amendments, the Commission reserves the right to require a new Notice of Intent. The plan filed with the new Notice of Intent must be based on an interim as-built plan prepared by a registered engineer. The new Notice must provide

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

a detailed description of the discrepancies between the approved plan and the site conditions to date. The Commission reserves the right to require as part of the interim as-built plan, but not be limited to requiring, new topography survey, new drainage calculations, and details or all disturbance within the wetland resource and the 100' wetland buffer zone.

PART V: CERTIFICATE OF COMPLIANCE REQUIREMENTS:

- a. Following completion of Phase I, Eversource shall request a Partial Certificate of Compliance. This Request shall be accompanied by as-built plans, stamped by a professional land surveyor or other qualified professional, detailing all elements of Phase I including all restoration plantings, wetlands replication, all stormwater management elements, post construction structural report, provide a cut/fill analysis for the project by stream reach and elevations to confirm adequate compensatory storage is provided and affidavit from all site professionals that all aspects of this Order were adhered to, along with reports associated with mitigation activities. Any deviations from the approved plans shall be specifically called out on the as-built plan. A report on the restoration/mitigation plantings and invasive species management program shall be provided that includes an assessment of the plant community composition in the context of the wildlife habitat restoration. Vegetation outside the limit of work shall also be evaluated to confirm no negative impacts occurred outside the limit of work.
- b. Following completion of Phase II and full stabilization of the site, a full Certificate of Compliance shall be requested, accompanied by an as-built plan of Phase II elements overlain the Phase I as-built plan, final report on restoration/mitigation efforts, and post construction structural report. Any deviations from the approved plans shall be specifically called out on the as-built plan.

PART VI: CONDITIONS IN PERPETUITY:

The following conditions shall be recorded at the Registry of Deeds as part of this Order of Conditions and shall continue in perpetuity and be included on the Certificate of Compliance. Owners of this property shall be made aware of restrictions in perpetuity on the activities allowed on this property. If the property owner has good cause to request an amendment to the conditions in perpetuity, he/she shall have the right to make a request for an amendment to the issuing authority. If, in the judgment of the issuing authority, the proposed activities will not detrimentally impact the wetland resource area functions, this Order, or the Certificate of Compliance shall be amended.

- a. Wetlands are located on this property that are subject of the Massachusetts Protection Act (Chapter 131, section 40) and the Sudbury Wetlands Administration Bylaw. Any work within a wetland resource area (including the 200' riverfront area) or within 100' of a wetland resource area requires review and approval by the Sudbury Conservation Commission prior to the commencement of such work.
- b. To ensure the environmental integrity of the site is maintained to offset the permitted activity, after the initial management period of five (5) years, the 3.3-acre invasive species management areas shall be monitored annually for the presence of invasive species and annual reports shall be submitted to the Conservation Office. Any areas found to contain concentrations of invasive species and/or should the plant community within the management area exceed 10% invasive species, the management area shall be managed by DCR in accordance with a program developed in consultation with the Commission's representative.
- c. Fertilizers shall not be used within jurisdictional areas.

ORDER OF CONDITIONS
State Wetlands Protection Act &
Sudbury Wetlands Administration Bylaw

- d. No pesticides or herbicides are allowed within a wetland resource area, including the 200-foot riverfront area, or within 100-foot of a wetland resource area (the adjacent upland resource area under the local bylaw), except for spot treatment of Japanese knotweed, without additional review by the Conservation Commission.
- e. Underground storage of petroleum products is prohibited within a wetland resource area and within the 100' buffer zone of a wetland resource area.
- f. No coal tar-based sealants may be applied to any area draining into the upland or wetland resource areas of the property.
- g. All components of the stormwater management system shall be maintained in accordance with the MassCentral Rail Trail (MCRT) – Wayside Section Stormwater Management System Operation and Maintenance Plan (O&M) and the Long Term Pollution Prevention Plan, and as necessary to function as designed. Inspection checklists shall be maintained and be made available for review by the Conservation Commission or staff on request.
- h. There shall be no snow removal activities or de-icing products used on site, except as required for emergency situations.
- i. The five-foot maintained area over the transmission line, outside the two-foot shoulders that will be regularly maintained, may be mown once per year, before April 1 or after November 1. Mowing outside this timeframe may be allowed in accordance with the Final Corridor Management Plan, with the objective of allowing vegetation to go to seed and propagate.
- j. When maintaining the rail trail, no debris, including natural debris such as leaves, shall be blown or swept into areas within 25 feet of vernal pools. Signage or other means of demarcating this management requirement shall be provided to and approved by the Conservation Commission prior to issuance of a Certificate of Compliance.
- k. The culverts and drainage structures shall be inspected at least annually and cleared of debris as needed. If culverts become damaged or no longer function as required, they shall be repaired or replaced according to most current MA Stream Crossing Standards. This work will require review and approval by the Conservation Commission under a Notice of Intent.
- l. If herbicide use by DCR is permitted under a future Vegetation Management Plan, as approved by the Department of Agricultural Resources, herbicide use shall be prohibited within any certified or certifiable vernal pool, vegetated wetlands or waterways. Invasive species removal by DCR will be by mechanical means when possible and spot treatment of herbicide by a licensed herbicide applicator when other approaches are ineffective. DCR shall notify the Commission in advance, if herbicides are to be used within wetland jurisdictional areas, indicating the target control species, the type(s) of herbicide to be used, and the on-going maintenance plan for the targeted area.
- m. All trail amenities, such as benches and kiosks, shall be located outside wetland jurisdictional areas, except as shown on the approved plans.

Response action that requires expeditious attention to reduce imminent and substantial dangers to human health, welfare, or the environment or an emergency response required within hours or days to address acute situations involving actual or potential threat to human health, the environment, or real or personal property due to the release of a hazardous substance. Characterization of a removal action as removal, not immediate removal or planned removal, started at the beginning of FY 1987. This code now takes the place of immediate removal (IR) and planned removal (PR).

Site No: 3-0015951
Source: UST
Release Type: RAO
Chemical Type: Oil
Category: 72 HR
ROA Class Desc:

Initial Status Dt: 1/28/1999
Official Notifi Dt: 1/28/1998
Current Date: 10/3/2007
ROA Class: C1
Phase:

A temporary cleanup. Although the site does not present a 'substantial hazard', it has not reached a level of no significant risk. The site must be evaluated every five years to determine whether a Class A or Class B RAO is possible. All sites are expected eventually to receive a Class A or B RAO.

Phase Desc:
Release Type Desc:

(Response Action Outcome): A site/release where an RAO Statement was submitted. An RAO Statement asserts that response actions were sufficient to achieve a level of no significant risk or at least ensure that all substantial hazards were eliminated.

Status Desc: Response Action Outcome

Site No: 3-0004202 **Initial Status Dt:** 8/2/1997
Source: UST **Official Notifi Dt:** 12/10/1992
Release Type: RAO **Current Date:** 2/5/2009
Chemical Type: Oil **ROA Class:** C1
Category: NONE **Phase:** PHASE V
ROA Class Desc: A temporary cleanup. Although the site does not present a 'substantial hazard', it has not reached a level of no significant risk. The site must be evaluated every five years to determine whether a Class A or Class B RAO is possible. All sites are expected eventually to receive a Class A or B RAO.
Phase Desc: Operation, Maintenance, and/or Monitoring. During Phase V, long-term treatment processes are implemented and monitored to track cleanup progress.
Release Type Desc: (Response Action Outcome): A site/release where an RAO Statement was submitted. An RAO Statement asserts that response actions were sufficient to achieve a level of no significant risk or at least ensure that all substantial hazards were eliminated.
Status Desc: Response Action Outcome
