What do Dyslexia, Alzheimer's, PTSD, Stroke, Autism, Attention Deficit Disorder, Anxiety Disorders and Depression have in common? They are brain-based disabilities and they are protected under federal and state law. Learn how we can be more aware and inclusive of individuals who have disabilities we might not see.

Valerie Fletcher, Executive Director of the Institute for Human Centered Design, has devoted much of her career to understanding how the built environment, programs, and communications can be designed to be inclusive of individuals with brain-based conditions. Ms. Fletcher will explain the changing nature of disabilities and how policies do or do not help integrate our increasing population with brain-based conditions into community life. She will

be joined by **Sudbury Town Social Worker, Bethany Hadvab**, and **Police Chief, Scott Nix**, who will bring their local perspectives to this important topic.
