

Figure A:

Measurements as can best be determined from the scale on the revised construction plans from Eversource, dated December, 2020, where the corridor passes by the B & M Section Tool House. All measurements are approximate.

Approximate limit of grading. This line is located 16 inches from the end of the loading platform.

Allowing for a 2 foot shoulder on each side of the trail, this would be the left side shoulder edge.

Assuming a 10 foot paved trail, this would be the left side edge of the trail.

The center line of the new right of way is located 20 feet from the front of the Section Tool House.
